COMMUNITY ORGANIZING AND COMMUNITY BUILDING FOR HEALTH AND WELFARE

Rutgers University Press The third edition of Community Organizing and Community Building for Health and Welfare provides new and more established ways to approach community building and organizing, from collaborating with communities on assessment and issue selection to using the power of coalition building, media advocacy, and social media to enhance the effectiveness of such work. With a strong emphasis on cultural relevance and humility, this collection offers a wealth of case studies in areas ranging from childhood obesity to immigrant worker rights to health care reform. A "tool kit" of appendices includes guidelines for assessing coalition effectiveness, exercises for critical reflection on our own power and privilege, and training tools such as "policy bingo." From former organizer and now President Barack Obama to academics and professionals in the fields of public health, social work, urban planning, and community psychology, the book offers a comprehensive vision and on-the-ground examples of the many ways community building and organizing can help us address some of the most intractable health and social problems of our times. Dr. Minkler's course syllabus: Although Dr. Minkler has changed the order of some chapters in the syllabus to accommodate guest speakers and help students prep for the midterm assignment she uses, she arranged the actual book layout in a way that should flow quite naturally if instructors wish to use it in the order in which chapters appear.

COMMUNITY ORGANIZING AND COMMUNITY BUILDING FOR HEALTH

Rutgers University Press This updated and revised edition of a highly praised volume provides meaningful insights into the systems of inequality in the United States—such as race, class, and gender—that impact health, as well as a number of case studies and examples, as well as the role of context and continued need for community organizing to influence policy; using the arts in community building and organizing; online activism; and the role of cultural humility and systems change in building effective partnerships between local health departments and community residents.

COMMUNITY ORGANIZING AND COMMUNITY BUILDING FOR HEALTH AND SOCIAL EQUITY, 4TH EDITION

Rutgers University Press The fourth edition of Community Organizing and Community Building for Health and Social Equity provides both classic and recent contributions to the field, with a special accent on how these approaches can contribute to health and social equity. The 23 chapters offer conceptual frameworks, skill-building and case studies in areas like coalition building, organizing by and with women of color, community assessment, and the power of the arts, the Internet, social media, and policy and media advocacy in such work. The use of participatory evaluation and strategies and tips on fundraising for community organizing also are presented, as are the ethical challenges that can arise in this work, and helpful tools for anticipating and addressing them. Also included are study questions for use in the classroom. Many of the book's contributors are leaders in their academic fields, from public health and social work, to community psychology and urban and regional planning, and to social and political science. One author was the 44th president of the United States, himself a former community organizer in Chicago, who reflects on his earlier vocation and its importance. Other contributors are inspiring community leaders whose work on-the-ground and in partnerships with us "outsiders" highlights both the power of collaboration, and the cultural humility and other skills required to do it well. Throughout this book, and particularly in the case studies and examples shared, the role of context is critical, and never far from view. Included here most recently are the horrific and continuing toll of the COVID-19 pandemic, and a long overdue, yet still greatly circumscribed, "national reckoning with systemic racism," in the aftermath of the brutal police killing of yet another unarmed Black person, and then another and another, seemingly without end. In many chapters, the authors highlight different facets of the Black Lives Matter movement that took on new life across the country and the world in response to these atrocities. In other chapters, the existential threat of climate change and grave threats to democracy also are underscored. This report explores the roles and potential of the community as leaders, partners, and facilitators in transforming the social and environmental conditions that shape health and well-being at the local level.

COMMUNITIES IN ACTION

PATHWAYS TO HEALTH EQUITY

National Academies Press In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequalities in factors that impact health status, so-called determinants of health. Only part of an individual's health status is due to one's choices about health, behavior, and other determinants of health. The role of community in organizing for a better health environment is highlighted in this book. Community participation in the development of health policies and programs is essential to achieving health equity and improving the health of all Americans.

PARTICIPATORY DEVELOPMENT IN APPALACHIA

CULTURAL IDENTITY, COMMUNITY, AND SUSTAINABILITY

Univ. of Tennessee Press Often thought of as impoverished, backward, and victimized, the people of the southern mountains have long been prime candidates for development projects conceptualized and controlled from outside the region. This book, breaking with old stereotypes and the strategies they spawned, proposes an alternative paradigm for development projects in Appalachian communities-one that is far more inclusive and democratic than previous models. Emerging from a critical analysis of the modern development process, the participatory development approach advocated in this book assumes that local culture has value, that local communities have assets, and that local people have the capacity to envision and provide leadership for their own social change. It thus promotes better decision making in Appalachian communities through public participation and civic engagement. Filling a void in current research by detailing useful, hands-on tools and methods employed in a variety of contexts and settings, the book combines relevant case studies of successful participatory projects with practical recommendations from seasoned professionals. Editor Susan E. Keefe has included the perspectives of anthropologists, sociologists, and others who have been engaged, sometimes for decades, in Appalachian communities. These contributors offer hopeful new strategies for dealing with Appalachia's most enduring problems-strategies that will also aid activists and researchers working in other distressed or underserved communities. Susan E. Keefe is professor of anthropology at Appalachian State University. She is the editor of Appalachian Mental Health and Appalachian Cultural Competency: A Guide for Medical, Mental Health, and Social Service Professionals.

ECOSOCIAL THEORY, EMBODIED TRUTHS, AND THE PEOPLE'S HEALTH

Oxford University Press From public health luminary Nancy Krieger comes a revolutionary way of addressing health justice and the embodied truths of lived experience. Since the 1700s, fierce debates in medicine and public health have centered around whether sources of ill health can be attributed to either the individual or the surrounding body politic. But what if instead health researchers measure—and policies address—how people biologically embody their societal and ecological context? Ecological Theory, Embodied Truths, and the People's Health represents a daring new foray into analyzing how population patterns of health reveal the intersections of lived experience and biology in historical context. Expanding on Nancy Krieger's original ecocausal theory of disease distribution, this volume lays new theoretical groundwork about embodiment and health justice through concrete and novel examples involving pathways such as workplace discrimination, relationship abuse, Jim Crow, pollution violence, pesticides, fracking, green space, and climate change. It offers a crucial contribution to public health and medical practice by offering an alternative way of understanding health outcomes and the policies needed to achieve health equity.
