[Russia's French Connection](#) Adam Coker 2020-07-13 While it is generally acknowledged that Russia's culture has been influenced by France, the present study goes beyond the Francophile preferences of the noble elite and examines Russian society more broadly, exploring those elements of French cultural influence still relevant today. This is done through an historical analysis of French loanwords in the Russian language from the time of Peter the Great to the present. The result of this lexical analysis and subsequent study of eighteenth- and nineteenth-century archival, periodical, and memoir material is to empirically link Russia's present culture to two major Franco-Russian events: the wave of immigration to Russia following the French Revolution and Russia's war with Napoleon. This is primarily a book for those interested in European history, particularly imperial Russia, the French Revolution, and Napoleonic Wars. The study of Russian officer memoirs includes original campaign maps, which may be of interest to military historians. The analysis of periodical literature will likewise be a resource for those studying the history of printing, publishing, and journalism in Russia. The book's interdisciplinary nature, however, broadens its relevance to linguists, cultural historians, and those in the emerging field of Immigration Studies.

No Sound is Innocent Eddie Prévost 1995 Music/culture/politics. Once again in stock, imported from the UK. No Sound is Innocent presents the collected writings -- or 'meta-musical narrative' -- of Edwin Prevost, musician-theoretician and founding member of AMM, perhaps the western world's most long-lived and rigorously engaged improvising band. Since the 60s AMM, involving especially Keith Rowe, John Tilbury, the late composer/theorist Cornelius Cardew, and Lou Gare besides Prevost have attacked established conventions of music-making to arrive at a synthesis of spontaneity, invention and musical praxis of extraordinary interest.

Music Therapy Assessment Eric G. Waldon 2018-09-21 As the use of music therapy becomes more widespread so too does the need for detailed assessment.

Standardised assessment tools, and knowledge of how to integrate assessment into clinical practice, are needed for teaching, research and clinical purposes all around the world. Based on the findings of members of the International Music Therapy Assessment Consortium (IMTAC), this comprehensive anthology collects the latest research and clinical practice methods about music therapy assessment. Looking at the available assessment tools holistically, the book covers the major assessment models currently used in clinical practice, and details each model's setting and motivation, development, theoretical background, and how to implement it in a clinical setting.

Mistakes in Contract Law Catharine MacMillan 2010-01-15 It is a matter of some difficulty for the English lawyer to predict the effect of a misapprehension upon the formation of a contract. The common law doctrine of mistake is a confused one, with contradictory theoretical underpinnings and seemingly irreconcilable cases. This book explains the common law doctrine through an examination of the historical development of the doctrine in English law. Beginning with an overview of contractual mistakes in Roman law, the book examines how theories of mistake were received at various points into English contract law from Roman and civil law sources. These transplants, made for pragmatic rather than principled reasons, combined in an uneasy manner with the pre-existing English contract law. The book also examines the substantive changes brought about in contractual mistake by the Judicature Act 1873 and the fusion of law and equity. Through its historical examination of mistake in contract law, the book provides not only insights into the nature of innovation and continuity within the common law but also the fate of legal transplants.

Dietary Nutrients, Additives and Fish Health Cheng-Sheng Lee 2015-06-22 Fish nutrition can be the deciding factor between a robust and healthy farmed fish

population and low aquaculture production. In an age where chemicals and antibiotics are under greater scrutiny than ever, a strong understanding of the role of nutrients and feed additives is essential in the aquaculture industry. Dietary Nutrients, Additives and Fish Health is a comprehensive review of dietary nutrients, antinutritional factors and toxins, and non-nutrient dietary additives, and their effects on fish performance and immune system function, as well as overall health. The book opens with an overview of fish immune systems and health. Subsequent chapters delve into proteins and amino acids, lipids and fatty acids, carbohydrates, beta glucans, vitamins, minerals, antinutrients, mycotoxins, nucleotides, prebiotics, probiotics, organic acids and their salts, and plant extracts and their impacts on fish health, growth, and development. The text then concludes with a chapter on feeding practices. Authored by leaders in aquaculture, Dietary Nutrients, Additives and Fish Health will be an invaluable resource to graduate students, researchers and professionals alike.

Advances in Plant Breeding Strategies: Industrial and Food Crops Jameel M. Al-Khayri 2019-11-01 This book examines the development of innovative modern methodologies towards augmenting conventional plant breeding, in individual crops, for the production of new crop varieties under the increasingly limiting environmental and cultivation factors to achieve sustainable agricultural production, enhanced food security, in addition to providing raw materials for innovative industrial products and pharmaceuticals. This is Vol 6, subtitled Industrial and Food Crops, which consists of two parts. Included in Part I are 11 industrial plant species utilized as sources of raw materials for the production of industrial products including pulp and wood crops (acacia), fiber (cotton, jute and ramie), rubber (guayule and rubber tree), oil (jojoba and flax), biofuels and pharmaceutical (agave) and sugar source (sugarcane). Part II covers 7 food plants selected for their utilization in food industries for the production of chocolate (cacao), cooking oil (oil palm, safflower, sesame and sunflower) and natural flavors and aroma (saffron and vanilla). This volume is contributed by 60 internationally reputable scientists from 14 countries. Each chapter comprehensively reviews the modern literature on the subject and reflects the authors own experience.

Eats, Shoots & Leaves Lynne Truss 2004-04-12 We all know the basics of punctuation. Or do we? A look at most neighborhood signage tells a different story. Through sloppy usage and low standards on the internet, in email, and now text messages, we have made proper punctuation an endangered species. In Eats, Shoots & Leaves, former editor Lynne Truss dares to say, in her delightfully urbane, witty, and very English way, that it is time to look at our commas and semicolons and see them as the wonderful and necessary things they are. This is a book for people who love punctuation and get upset when it is mishandled. From the invention of the question mark in the time of Charlemagne to George Orwell shunning the semicolon, this lively history makes a powerful case for the preservation of a system of printing conventions that is much too subtle to be mucked about with.

Doubling Student Performance Allan R. Odden 2009-01-12 At a time when the United States is struggling with far-reaching educational reform, school leaders need a blueprint that can dramatically improve student success and then support that success by effectively reallocating and managing available resources. Doubling Student Performance combines the latest research with the authors' national study of diverse schools that were able to significantly boost student achievement. Strategies focus on reducing class size, promoting professional development, locating necessary funding, and providing academic support to struggling students. School leaders will find Examples and case studies that include high-minority and high-poverty schools 10 key strategies for dramatically increasing student achievement, such as setting ambitious goals and emphasizing a collaborative culture Clear steps and specific tools to successfully reallocate resources This book is a valuable tool for educators and policy makers who understand that reform is only possible when schools have the human and financial resources to do it. Improbable Scholars David L. Kirp 2015-05-13 "In Improbable Scholars, David L. Kirp challenges the conventional wisdom about public schools and education reform in America through an in-depth look at Union City, New Jersey's high-performing urban school district. In this compelling study, Kirp reveals Union's city's revolutionary secret: running an exemplary school system doesn't demand heroics, just hard and steady work"--

Reserves in the Future Force 2020 Great Britain. Ministry of Defence 2013-07-01 This White Paper sets out the future relationships Defence seeks with reservists and their families, their employers and society. Under the Future Reserves 2020 programme the Government has committed an additional £1.8 billion over ten year. The route from selection, is being simplified, making it easier for reservists to get to the level of training required. There will be improved alignment of pay and benefits with regulars. Reservists' total remuneration will be increased through the provision of a paid annual leave entitlement. From April 2015, when the new Armed Forces pension scheme is introduced, reservists will accrue pension entitlements for time spent on training as well as when mobilised. Welfare support will also be delivered to regulars and reservists alike, and their families, according to the impact of military service and their need. Recruitment of Army Reserve officers and those leaving the Regular Army will be encouraged to join the Reserves through bonuses of up to £5,000. A National Relationship Management scheme will be established to strengthen relationships with employer organisations and the largest employers from both the public and private sector and there will be provision of extra financial support to small and medium sized employers. New legislation will be introduced to enable mobilisation for the full range of tasks which our Armed Forces may be asked to undertake. The Territorial Army will also be renamed the 'Army Reserve' to reflect the significant changes in its role and its integration into the Whole Force.

The Biblical Foundations of Christian Worship Robert E. Webber 1993 In an extraordinary way, The Biblical Foundations of Christian Worship is a massive and comprehensive undertaking designed to provide the biblical context out of which worship is celebrated and enacted. It establishes the working definition for worship through the specific vocabularies of the Old and New Testaments and highlights the use of symbolism, sacrifice, a sense of the numinous, and the myriad of responses to salvation history. It culminates with the history of Israelite/Jewish and New Testament worship, the biblical institutions of worship and those who lead in its celebration, and then reaches its zenith with the depiction of the use of music and art in its varied forms and other sacred acts which are integral parts of the worship tradition. Richard A. Rollins, Liaison Officer, National Baptist Convention of America, Inc.

Establishing the Supremacy of European Law Karen J. Alter 2002 How did the European Community's legal system become the most effective international legal system in the world? This book starts where traditional legal accounts leave off, explaining why national judiciaries took on a role enforcing European law supremacy against their governments. It also shows why national governments accepted an institutional change that greatly compromised national sovereignty.

The Music Architect Constance M. Cherry 2016-07-19 Guidance for Leaders Seeking a Richer Way to Employ Worship Music Worship expert Constance Cherry offers comprehensive guidance to Christian leaders seeking a deeper, richer way to employ worship music in engaging ways for twenty-first-century worshippers. Following Cherry's successful book The Worship Architect, this work helps Christian leaders think theologically and act pastorally about worship music in their churches. It addresses larger issues beyond the surface struggles of musical styles and provides tools to critically evaluate worship songs. The book is applicable to all Christian traditions and worship styles and is well suited to both the classroom and the local church. Each chapter concludes with suggested practical exercises, recommended reading, and basic vocabulary terms.

Introduction to Music Therapy Practice Annie Heidersheit 2018 An overview of music therapy clinical practice in the 21st century, structured around the ways music therapists engage clients in music experiences - re-creating, composing, improvising and active listening. The text includes forty-eight case illustrations from twenty-nine clinicians practicing with diverse client populations. These cases demonstrate how the music therapist adapts the method to meet the unique needs and interests of clients. The benefits of these methods are outlined, and representative research is provided to support clinical applications.

Music Therapy Ronald M. Borczon 2017-04-15 Writing from over 35 years of experience as a music therapy clinician and educator, the author has provided the field with an invaluable, "hands-on" introduction to field work and practicum experiences. This is the second, updated, and expanded version of the first edition, originally published in 2004. After defining the essential attributes of a music therapist, the author explains the field learning process and the therapeutic process, pointing out the various challenges that students face in their developing years. Of particular interest is the section giving advice on how to cope with the inevitable anxiety of leading one's first session in a clinical setting. The book then offers practical suggestions on "how to" (1) use music, (2) verbally process a musical improvisation, (3) deal with difficult clients, (4) collect and report clinical data, and (5) benefit from supervision. Already field-tested by the author with his own students, this companion to field training is an invaluable resource for practicum students, interns, supervisors, educators, and practitioners.

Worship Old and New Robert E. Webber 2009-12-15 A reexamination of the actual practice of worship that goes beyond the merely academic to provide a practical perspective through the eyes of the worship leader and the congregation. The most effective approach to worship is one that blends historical and traditional practices with contemporary elements. Worship Old and New is a scholarly, up-to-date, and thought-provoking resource for anyone serious about exploring worship and how to bring about a worship renewal in the church. Now reformatted and updated for an easier, more logical approach to worship theology, this revised edition is divided into four major sections, addressing: The biblical foundation of worship—found in the Old and New Testaments as well as the early Christian movement. The biblical theology of worship—how worship is an enactment of the Gospel. A brief history of worship—from ancient and medieval, to twentieth-century renewal. An overview of how worship is practiced—from content and structure, to the role of music and art. New information is incorporated into each section to give you a better grasp of the biblical themes of worship, a deeper understanding of Old Testament customs, and a solid grounding in modern-day renewal movements. This book is ideal for ministerial, classroom, and congregational settings.

Convex Optimization & Euclidean Distance Geometry Jon Dattorro 2005 The study of Euclidean distance matrices (EDMs) fundamentally asks what can be known geometrically given onlydistance information between points in Euclidean space. Each point may represent simply locationor, abstractly, any entity expressible as a vector in finite-dimensional Euclidean space.The answer to the question posed is that very much can be known about the points;the mathematics of this combined study of geometry and optimization is rich and deep.Throughout we cite beacons of historical accomplishment.The application of EDMs has already proven invaluable in discerning biological molecular conformation.The emerging practice of localization in wireless sensor networks, the global positioning system (GPS), and distance-based pattern recognitionwill certainly simplify and benefit from this theory.We study the pervasive convex Euclidean bodies and their various representations.In particular, we make convex polyhedra, cones, and dual cones more visceral through illustration, andwe study the geometric relation of polyhedral cones to nonorthogonal bases biorthogonal expansion.We explain conversion between halfspace- and vertex-descriptions of convex cones,we provide formulae for determining dual cones,and we show how classic alternative systems of linear inequalities or linear matrix inequalities and optimality conditions can be explained by generalized inequalities in terms of convex cones and their duals.The conic analogue to linear independence, called conic independence, is introducedas a new tool in the study of classical cone theory; the logical next step in the progression:linear, affine, conic.Any convex optimization problem has geometric interpretation.This is a powerful attraction: the ability to visualize geometry of an optimization problem.We provide tools to make visualization easier.The concept of faces, extreme points, and extreme directions of convex Euclidean bodiesis explained here, crucial to understanding convex optimization.The convex cone of positive semidefinite matrices, in particular, is studied in depth.We mathematically interpret, for example,its inverse image under affine transformation, and we explainhow higher-rank subsets of its boundary united with its interior are convex.The Chapter on "Geometry of convex functions",observes analogies between convex sets and functions:The set of all vector-valued convex functions is a closed convex cone.Included among the examples in this chapter, we show how the real affinefunction relates to convex functions as the hyperplane relates to convex sets.Here, also, pertinent results formultidimensional convex functions are presented that are largely ignored in the literature;tricks and tips for determining their convexityand discerning their geometry, particularly with regard to matrix calculus which remains largely unsystematizedwhen compared with the traditional practice of ordinary calculus.Consequently, we collect some results of matrix differentiation in the appendices.The Euclidean distance matrix (EDM) is studied,its properties and relationship to both positive semidefinite and Gram matrices.We relate the EDM to the four classical axioms of the Euclidean metric;thereby, observing the existence of an infinity of axioms of the Euclidean metric beyondthe triangle inequality. We proceed byderiving the fifth Euclidean axiom and then explain why furthering this endeavoris inefficient because the ensuing criteria (while describing polyhedra)grow linearly in complexity and number.Some geometrical problems solvable via EDMs,EDM problems posed as convex optimization, and methods of solution arepresented;`eg, we generate a recognizable isotonic map of the United States usingonly comparative distance information (no distance information, only distance inequalities).We offer a new proof of the classic Schoenberg criterion, that determines whether a candidate matrix is an EDM. Our proofrelies on fundamental geometry; assuming, any EDM must correspond to a list of points contained in some polyhedron(possibly at its vertices) and vice versa.It is not widely known that the Schoenberg criterion implies nonnegativity of the EDM entries; proved here.We characterize the eigenvalues of an EDM matrix and then devisea polyhedral cone required for determining

membership of a candidate matrix (in Cayley-Menger form) to the convex cone of Euclidean distance matrices (EDM cone); i.e., a candidate is an EDM if and only if its eigenspectrum belongs to a spectral cone for EDM^N. We will see spectral cones are not unique. In the chapter "EDM cone", we explain the geometric relationship between the EDM cone, two positive semidefinite cones, and the elliptope. We illustrate geometric requirements, in particular, for projection of a candidate matrix on a positive semidefinite cone that establish its membership to the EDM cone. The faces of the EDM cone are described, but still open is the question whether all its faces are exposed as they are for the positive semidefinite cone. The classic Schoenberg criterion, relating EDM and positive semidefinite cones, is revealed to be a discretized membership relation (a generalized inequality, a new Farkas-like lemma) between the EDM cone and its ordinary dual. A matrix criterion for membership to the dual EDM cone is derived that is simpler than the Schoenberg criterion. We derive a new concise expression for the EDM cone and its dual involving two subspaces and a positive semidefinite cone. "Semidefinite programming" is reviewed with particular attention to optimality conditions of prototypical primal and dual conic programs, their interplay, and the perturbation method of rank reduction of optimal solutions (extant but not well-known). We show how to solve a ubiquitous platonic combinatorial optimization problem from linear algebra (the optimal Boolean solution x to $Ax=b$) via semidefinite program relaxation. A three-dimensional polyhedral analogue for the positive semidefinite cone of 3×3 symmetric matrices is introduced; a tool for visualizing in 6 dimensions. In "EDM proximity" we explore methods of solution to a few fundamental and prevalent Euclidean distance matrix proximity problems; the problem of finding that Euclidean distance matrix closest to a given matrix in the Euclidean sense. We pay particular attention to the problem when compounded with rank minimization. We offer a new geometrical proof of a famous

result discovered by Eckart & Young in 1936 regarding Euclidean projection of a point on a subset of the positive semidefinite cone comprising all positive semidefinite matrices having rank not exceeding a prescribed limit ρ . We explain how this problem is transformed to a convex optimization for any rank ρ .

Introduction to the Theory of Ferromagnetism Amikam Aharoni 2000 The present book is the second edition of Amikam Aharoni's Introduction to the Theory of Ferromagnetism, based on a popular lecture course. Like its predecessor, it serves a two-fold purpose: First, it is a textbook for first-year graduate and advanced undergraduate students in both physics and engineering. Second, it explains the basic theoretical principles on which the work is based for practising engineers and experimental physicists who work in the field of magnetism, thus also serving to a certain extent as a reference book. For both professionals and students the emphasis is on introducing the foundations of the different subfields, highlighting the direction and tendency of the most recent research. For this new edition, the author has thoroughly updated the material especially of chapters 9 ('The Nucleation Problem') and 11 ('Numerical Micromagnetics'), which now contain the state of the art required by students and professionals who work on advanced topics of ferromagnetism. From reviews on the 1/e: '... a much needed, thorough introduction and guide to the literature. It is full of wisdom and commentary. Even more, it is Amikam Aharoni at his best - telling a story... He is fun to read... The extensive references provide an advanced review of micromagnetics and supply sources for suitable exercises... there is much for the student to do with the guidance provided by Introduction to the Theory of Ferromagnetism.' A. Arrott, Physics Today, September 1997
