Defense Modeling, Simulation, and Analysis National Research Council 2006-09-22 Modeling, simulation, and analysis (MS&A) is a crucial tool for military affairs. MS&A is one of the announced pillars of a strategy for transforming the U.S. military. Yet changes in the enterprise of MS&A have not kept pace with the new demands arising from rapid changes in DOD processes and missions or with the rapid changes in the technology available to meet those demands. To help

address those concerns, DOD asked the NRC to identify shortcomings in current practice of MS&A and suggest where and how they should be resolved. This report provides an assessment of the changing mission of DOD and environment in which it must operate, an identification of high-level opportunities for MS&A research to address the expanded mission, approaches for improving the interface between MS&A practitioners and decision makers, a discussion of training and continuing education of MS&A practitioners, and an examination of the need for coordinated military science research to support MS&A.

The Internal-combustion Engine in Theory and Practice Charles Fayette Taylor 1985 This revised edition of Taylor's classic work on the internal-combustion engine incorporates changes and additions in engine design and control that have been brought on by the world petroleum crisis, the subsequent emphasis on fuel economy, and the legal restraints on air pollution. The fundamentals and the topical organization, however, remain the same. The analytic rather than merely descriptive treatment of actual engine cycles, the exhaustive studies of air capacity, heat flow, friction, and the effects of cylinder size, and the emphasis on application have been preserved. These are the basic qualities that have made Taylor's work indispensable to more than one generation of engineers and designers of internal-combustion engines, as well as to teachers and graduate students in the fields of power, internal-combustion engineering, and general machine design. Charles Fayette Taylor is Professor of Automotive Engineering Emeritus at MIT. He directed the Sloan Automotive Laboratories at MIT from 1926 to 1960

But experienced pilot Brian Waugh's Dominie was forced down by engine failure into Queenstow's Shotover River. This book tells the absorbing story of this unusual accident. The subsequent intrigue involved engine reliability issues, an inadequate accident investigation, and how Waugh, a licensed aircraft engineer, while recovering from his injuries, happened by chance to inspect one of the engines being dismantled for overhaul. What he discovered led him to relentlessly advocate for a proper investigation ..."--Publisher's description.

Crime and the Female Perpetrator Stephanie Scott-Snyder 2018-12-14 Until recently, gender stereotypes have shaped the ways in which society views female offenders, often as individuals incapable of criminal activity or extreme violence. When Women Offend: Crime and the Female Perpetrator sheds light on the complex world of female offending, demonstrating women's capability to behave aggressively and violate gender expectations. This title features excerpts of interviews with incarcerated women, as well as links to full audio recordings of each interview. The interviews are available to all readers, regardless of the format they select, and provide them with a unique and intimate lens into the experiences of female offenders relayed in their own words. Readers learn about the influence of gender stereotypes on perceptions of female offending, as well as about common myths associated with female deviance. They are introduced to criminological theory and explore psychological, developmental, sociological, and biological theories through a feminist lens. Dedicated chapters outline various types of female offending, from serial killing to Munchausen by proxy, filicide to sex offending, domestic homicide to terrorism, and more. Each of these chapters includes real-life cases and an exploration of motives and social factors. When Women Offend is ideal for courses in criminology and criminological theory, especially those focused on the female offender.
