## *Sports-Related Concussions in Youth*

2014-02-04 National Research Council In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science,

Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

## **Managing Drugs in Sport**

2016-10-04 Jason Mazanov As ongoing high-profile drug scandals have demonstrated, sports organisations rarely have a coherent strategy to manage the role and relationship their sport has with different types of drugs (from alcohol to supplements to prescription drugs to doping). This important and timely book argues that drug control-led integrity management of sport is more than an ideological battle around doping. The relationship sport has with the drugs industry has become a much broader management problem. The breadth of the problem compels stakeholders in sport (including athletes, coaches, fans, public servants and sports managers) to understand better the issues in pursuit of effective strategies and responses. Drawing on cutting-edge management theory, this book explores the dilemma of drugs in sport. It introduces the policy and business contexts that have shaped responses to this issue and examines its significance to sport and integrity management, including human resource management, marketing, and risk management. It discusses practical management concerns, such as working with scientists and anti-doping organisations, and offers clear recommendations for the future management of sports integrity. The first book to offer a complete framework for a drugs management strategy for sport, *Managing Drugs in Sport* is essential reading for all advanced students, researchers and practitioners working in sport management, sport business, sport policy, sport governance and business ethics.

The authors argue that notwithstanding its sometimes aimless look and ostensibly unstructured material, casual conversation is a highly structured activity and has a crucial role in the social construction of reality. The field of Engineering Economics and Cost Estimation is an essential aspect of any engineering project. It involves current and upcoming economic factors, making it essential to obtain accurate estimates of future costs, benefits, and other economic parameters. Engineers regularly deal with projects whose scale, complexity, and uncertainty call for complex approaches to planning and budgeting<sup>[1]</sup>. Several methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates<sup>[2]</sup>. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Several models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating.
