The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition 2015-07-29 American Psychiatric Association Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors;

assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

Rapid Interpretation of ECGs in Emergency Medicine 2012-04-20 Jennifer L. Martindale For a busy clinician in the Emergency Department, the ability to spot a lethal cardiac condition is critical. Rapid Interpretation of ECGs in Emergency Medicine fills a gap in ECG training in an easy-to-use, highly visual format. ECG patterns, gathered from patient records and from the files of physicians at the Harvard-affiliated hospitals, represent the range of pathologies that hospitalists, internal medicine physicians, family medicine physicians, and emergency medicine physicians must recognize. The format of Rapid Interpretation of ECGs in Emergency Medicine is to first show the ECG in its native state to give you the chance to recognize and interpret salient features. The page can then be flipped to look at the same ECG with abnormal patterns enlarged, highlighted in color, and described in brief text. The ECGs are presented with and without annotations so you can test your diagnostic skills.

Marriott's Practical Electrocardiography 2013-12-18 Galen S Wagner "One of the strengths of Marriott's Practical Electrocardiography through its more than 50-year history has been its lucid foundation for understanding the basis for ECG interpretation. Again, in this revision, we have attempted to retain the best of the Marriott tradition--emphasis on the concepts required for everyday ECG interpretation and the simplicities, rather than complexities, of the ECG recordings. During preparation of the 9th and 10th editions, Tobin Lim coauthored many of the 11th edition chapters and served as the primary developer of the digital content associated with that edition. Tobin Lim's input continues into this 12th edition, and David Strauss has led even further into the electronic-based interactive learning experiences. More than 30 of the figures that evolved through previous editions have now been converted through the creative expertise of Mark Flanders into animated movies accessed via QR codes imbedded in the book. David has also collaborated with electrocardiographic educators who are especially skilled in e-based education to add interactive video content to many of the 12th edition chapters. Each of the now 24 chapters is divided (as indicated in the table of contents) into discrete, compact "learning units." Each learning unit begins on a new page to provide blank space for the reader's notes. The purpose of the learning units is to make this book easier to use by allowing the reader to be selective regarding the material to be considered at a particular time. Because the modern student of electrocardiography is primarily oriented to a visual perspective, we have typically begun each page with an illustration"--Provided by publisher.

Winningham's Critical Thinking Cases in Nursing - E-Book 2013-12-27 Mariann M. Harding Develop your critical thinking and clinical reasoning skills with 150 realistic case studies from the four major clinical practice areas: medical-surgical, pediatric, maternity, and psychiatric/mental health nursing. Each case covers a common problem, drawn from actual clinical experiences and written by nurses who are clinical experts. All cases have been thoroughly updated and revised to reflect current clinical practices, with integrated content on pharmacology, nutrition, and diagnostic/laboratory tests to encourage you to think critically about all aspects of care. This fifth edition also features an increased emphasis on patient management, and new documentation and communication exercises. Plus new NCLEX® Examination format-questions help you prepare for success on the NCLEX® Examination and provide safe, quality patient care. Three-part organization presents cases in three parts: 1) Medical-Surgical Cases; 2) Pediatric, Maternity, and Psychiatric Cases; and 3) Other/Advanced Cases, the latter covering key topics such as multi-system disorders and emergency situations. Realistic case study approach incorporates cases drawn from actual clinical experiences to help you identify changes, anticipate possible complications, and initiate therapeutic interventions. Increasing case complexity provides you with a foundation on which to build as you advance to more difficult cases. Two new pediatric case studies strengthen your ability to recognize and effectively manage common disorders presenting in pediatric patients. New NCLEX Examination-format questions have been added throughout, including multiple choice, prioritization/ordering, chart/exhibit, and dosage calculation questions. Increased number of higher-level questions requires clinical reasoning rather than simply memorizing and recalling information. An emphasis on patient management reinforces the type of clinical decision-making needed in the clinical setting as well as reflecting the type of questions on the latest NCLEX Examination. Over 25 new illustrations and graphics such as ECG strips, lab/diagnostic test reports, anatomical diagrams, and medication labels are now interwoven throughout the book. New documentation and communication exercises ask you to document relevant patient information or to use the "SBAR" communication technique to communicate patient findings to the physician.
