The publication “Analyzing Casual Conversation” by Suzanne Eggins and Diana Slade, first released in 1997, establishes a systematic model for the study and description of casual conversation in English. The authors argue that in spite of its sometimes aimless look and apparently unstructured content, casual conversation is a highly structured undertaking and plays a vital function in the social building of reality. The book proceeds through real samples of casual conversations involving participants differing in age, gender, ethnicity, and socio-economic class<sup>12</sup>. Pulling on perspectives from sociology, linguistics, and critical semiotics, the publication provides readers with the analytical skills to describe the layers of structure and critical interpretive structures to explain the ‘social work’ that happens on through chat.

The Northstar motor, manufactured by General Motors (GM) from 1993 until 2011, was a premium 90° V engine range and GM's first production V-8 with overhead camshafts<sup>1</sup>. However, in spite of its first success, the Northstar engine has been linked with a variety of issues over the decades. One of the most common troubles is getting too hot, which can result in

significant destruction to the engine block. An additional trouble is oil use, which can result in bad fuel efficiency and expensive repairs. Many Northstar engine proprietors also report issues with head gaskets, which can cause overheating troubles and cause costly repairs.

Particularly, the Northstar engine years from 1993 to 2005 have been noted to have leakage troubles, broken seals, damaged head gaskets, more oil loss, damaged valve cover, faulty water pumps, and carbon collection. These issues are not significant, but the cost to repair the troubles was substantially greater than the majority of other engines due to the detailed engineering.
