The Project Managers Guide to IDIQ Task Order Service Contracts

2016-11-04 Mark E. Salesky Every year the US federal government will spend roughly 100 billion dollars through competitive IDIQ (Indefinite Duration Indefinite Quantity) contracts. When you add in contracts awarded by State governments and commercial organizations using very similar processes you're looking at 700 billion dollars' worth of business. Getting a slice of that pie depends on how well you manage the contracting project. This is because IDIQs are essentially empty contract structures which then require a second round of winning task orders. For contracts with the government, this two-step structure which is specified in law and regulation, has specific pitfalls and opportunities which are rarely the subject of contract and project management training. Salesky's coaching style talks you through the specific challenges in the startup, management, and closing of the IDIQ. This book gives a pragmatic and best-practice description of the entire life cycle of this type of contract offering you the "inside advisor" you need to help you through the pragmatics issues of clients', performers', and bosses' expectations.

The results of these surveys, along with the collective experience and expertise of the technical committee membership, were used to restructure much of the guide and to update and expand the discussion of current practices for the effective use of consultants.

Public Procurement of Energy Efficiency Services

2009-12-17 Jas Singh The current universal concerns about global energy security, competitiveness, and environmental protection make energy efficiency more important than ever. However, realizing large-scale savings has proven a significant challenge due to many barriers. 'Public Procurement of Energy Efficiency Services' looks at a largely untapped energy efficiency market the public sector. While the efficiency potential in this sector is substantial, the implementation of energy savings programs has been complicated by a number of factors, such as insufficient incentives to lower energy costs, rigid budgeting and procurement procedures, and limited access to financing. The book looks at energy savings performance contracts (ESPCs) as a means of overcoming some of these barriers. Because public facilities can outsource the full project cycle to a commercial service provider, ESPCs can enable public agencies to solicit technical solutions, mobilize commercial financing, and assign performance risk to third parties,

allowing the agency to pay from a project's actual energy savings. The recommendations in this book stem from case studies that identified approaches, models, and specific solutions to ESPC procurement, including budgeting, energy audits, and bid evaluation. Such an approach also offers enormous potential to bundle, finance, and implement energy efficiency projects on a larger scale in the public sector, which can yield further economies of scale. ESPCs can also serve as an attractive element for fiscal stimulus packages and efforts by governments to 'green' their infrastructure, which can create local jobs, reduce future operating costs, and mitigate their carbon footprint. Lower energy bills, in turn, help to create fiscal space in future years to meet other critical investment priorities. Bundled public sector energy efficiency projects can help stimulate local markets for energy efficiency goods and services and 'lead by example', demonstrating good practices and providing models to the private sector.
