Chapter four of the Holt Chemistry textbook, titled "Periodic Table", provides a thorough look of the table of elements and its constituents. The chapter opens with a dialogue on the characteristics of groups and periodic groups, clarifying how Russian chemist Dmitri Mendeleev organized elements by their weight in ascending order¹. It then explores the notion of valence electrons and energy levels of atoms, highlighting the function of valence electrons in chemical reactions and changes to atomic structures and molecular structures.

The chapter additionally differentiates between transition elements and main elements, detailing on their characteristics and attributes. It also explains the notion of energy of ionization and its trends among groups and periods on the periodic table¹. The chapter talks

about atom's and radii, and how these can be anticipated based on an element's position on the table of elements. The concept of electronegativity, which quantifies an atom's inclination to pull a bonding pair of electrons, is another key topic covered in this part1. The chapter finishes with a dialogue on the diagonal relationship, metallic character, and point of boiling of components. In terms of exercises, the chapter provides a variety of questions and standardized test preparation supplies to reinforce the ideas learned. These questions cover a range of subjects, from understanding the arrangement of elements to investigating the trends in the periodic table.
