Chapter four of Holt Chemistry, titled "Periodic Table", provides a detailed look of the periodic table and its constituents. The chapter begins with a conversation on the characteristics of groups and periodic groups, elucidating how Russian chemist Mendeleev arranged elements by their atomic weight in ascending order¹. It then dives into the idea of valence electrons and energy levels of atoms, underscoring the role of valence electrons in reactions and changes to atomic structures and molecular structures. The chapter moreover separates between transition elements and main group elements, detailing on their features and attributes. It also clarifies the concept of ionization energy and its tendencies among groupings and periodic groups on the periodic table¹. The chapter talks about atom's and radii, and how these can be forecasted based on an element's location on the table of elements.

The concept of electronegativity, which measures an atom's inclination to

pull a pair of bonding electrons, is another important topic addressed in this section¹. The chapter finishes with a discussion on the relationship diagonally, metallic character, and boiling point of constituents. In terms of exercises, the chapter provides a array of questions for practice and standardized test preparation materials to strengthen the ideas studied. These exercises cover a array of subjects, from understanding the order of components to exploring the patterns in the table of elements.
