*In-cell NMR Spectroscopy*

2019-12-09 Yutaka Ito In-cell NMR spectroscopy is a relatively new field. Despite its short history, recent in-cell NMR-related publications in major journals indicate that this method is receiving significant general attention. This book provides the first informative work specifically focused on in-cell NMR. It details the historical background of in-cell NMR, host cells for in-cell NMR studies, methods for in-cell biological techniques and NMR spectroscopy, applications, and future perspectives. Researchers in biochemistry, biophysics, molecular biology, cell biology, structural biology as well as NMR analysts interested in biological applications will all find this book valuable reading.

**Elio Petri**

2021-06-30 Roberto Curti Elio Petri (1929-1982) was one of the most commercially successful and critically revered Italian directors ever. A cultured intellectual and a politically committed filmmaker, Petri made award-winning movies that touched controversial social, religious, and political themes, such as the Mafia in We Still Kill the Old Way (1967), police brutality in Investigation of a Citizen Above Suspicion (1970), and workers' struggles in Lulu the Tool (1971). His work also explored genre in a thought-provoking and refreshing manner with a taste for irony and the grotesque: among his best works are the

science fiction satire The 10th Victim (1965), the ghost story A Quiet Place in the Country (1968), and the grotesque giallo Todo modo (1976). This book examines Elio Petri's life and career, and places his work within the social and political context of postwar Italian culture, politics, and cinema. It includes a detailed production history and critical analysis of each of his films, plenty of never-before-seen bits of information recovered from the Italian ministerial archives, and an in-depth discussion of the director's unfiled projects.

**Mathematics for the Life Sciences**

2014-08-17 Erin N. Bodine An accessible undergraduate textbook on the essential math concepts used in the life sciences The life sciences deal with a vast array of problems at different spatial, temporal, and organizational scales. The mathematics necessary to describe, model, and analyze these problems is similarly diverse, incorporating quantitative techniques that are rarely taught in standard undergraduate courses. This textbook provides an accessible introduction to these critical mathematical concepts, linking them to biological observation and theory while also presenting the computational tools needed to address problems not readily investigated using mathematics alone. Proven in the classroom and requiring only a background in high school math, Mathematics for the Life Sciences doesn't just focus on calculus as do most other textbooks on the subject. It covers deterministic methods and those that incorporate uncertainty, problems in discrete and continuous time, probability, graphing and data analysis, matrix modeling, difference equations, differential equations, and much more. The book uses MATLAB throughout, explaining how to use it, write code, and connect models to data in examples chosen from across the life sciences. Provides undergraduate life science students with a succinct overview of major mathematical concepts that are essential for modern biology Covers all the major quantitative concepts that national reports have identified as the ideal components of an entry-level course for life science students Provides good background for the MCAT, which now includes data-based and statistical reasoning Explicitly links data and math modeling Includes end-of-chapter homework problems, end-of-unit student projects, and select answers to homework problems Uses MATLAB throughout, and MATLAB m-files with an R supplement are available online Prepares students to read with comprehension the growing quantitative literature across the life sciences A solutions manual for professors and an illustration package is available
