Anna could never forget her first love, Leo. Their paths had crossed when they were both 16, at a enchanting summer camp. They were utterly smitten, spending every day sharing laughter, engaging in deep conversations, and experiencing the thrill of first love. Their bond was indestructible, and they vowed to keep in touch, to wait for each other, and to love each other forever. But life, as it often does, had a different path in store for them. They lost communication, they moved on with their lives, and they eventually married other people. Years passed, and the hustle and bustle of life took them in different directions. But fate, it seems, had not forgotten their undeniable connection. At a chance encounter, at a sentimental reunion, their paths crossed once again. The moment they laid eyes on each other, the flame of their first love rekindled. The same undeniable attraction that had drawn them together years ago was still potent. They felt the same excitement that had fueled their teenage romance, but they also felt the weight of time. Their souls ached for the unconditional love they had shared, but their minds grappled with the complexity of their current lives. They were caught in a tug-of-war, torn between the alluring memories of their first love and the stability and security of their present. They stood at a defining moment, forced to make a life-altering choice. Would they choose the all-consuming passion of their first love, risking the unknown that lay ahead, or would they hold onto the security of their current lives, forever wondering what could have been? Only time would tell if their first love would find a way to prevail.

Engineers regularly deal with projects whose scale, complexity, and uncertainty call for advanced approaches to planning and budgeting<sup>[2]</sup>[1]. Several methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates<sup>[1]</sup>[2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Several models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating.
