Urban Environment and Smart Cities in Asian Countries

2023-05-27 Uday Chatterjee

This book offers a thorough description of the challenges posed by increasing global urbanization. In addition, comprehensive perspectives are offered on how the contemporary urban challenges of our time are tackled by existing designers, architects, urban planners, and landscape architects thereby considering climate change, migration, resilience, politics, and environmental degradation. It includes insights from environmental design, geography, strategic planning, and engineering design. It goes beyond the jargon of technical innovation, and exposes the political, social and physical effects of digitalizing the world

in smart cities. The book focuses on the application of geospatial technology of smart cities - including system design for basic services, real-time control and the Internet of Things. It highlights the planning of land use, strategic development, and ecosystem-based knowledge to enhance economic growth and healthy urban environment and smart city management. The book also shows the contradictory aspects of smart city studies, and provides useful insights into the creation and execution of policies to strengthen decision-making processes in smart cities. This book leads the reader to a greater understanding of smart city growth, both theoretical and realistic and as such it provides an interesting read for urban geographers, urban designers,

Climate Security in the Anthropocene

2023-05-20 Judith Nora Hardt

The speed and scale of climate change presents unique and potentially monumental security implications for individuals, future generations, international institutions and states. Long-dominant security paradigms and policies may no longer be appropriate for dealing with these new security risks of the Anthropocene. In response to this phenomenon, this book investigates how states have reacted to these new challenges and how their different understandings of the climate-security nexus might shape global actions on climate change. It focuses on the perceptions, framings, and policies of climate security by members of the United Nations Security Council (UNSC), the world's highest ranking multilateral security forum.

Empirically, the book presents

detailed, bottom-up case studies from local authors of every UNSC member state in 2020. It combines this with an innovative theoretical approach spanning national, human and ecological security that helps to capture the complex dynamics of state-led approaches to dealing with security in the Anthropocene. This book therefore offers readers a compelling picture of climate-security politics in the UNSC, beyond Council debates and resolutions. By comparing and contrasting how different framings of climate security impact various policy sectors of members states, the authors are able to assess the barriers and opportunities for addressing climate security locally and globally. "This timely contribution to the literature on climate security examines the under-analysed relationship between the policy approaches of key countries at the national, and at the international level. Policy alignment at multiple levels of governance will be critical if we are to respond adequately to

the ubiquitous challenges posed by climate change and variability." Shirley Scott, Head of School and Professor, School of Humanities and Social Sciences, UNSW Canberra at the Australian Defence Force Academy (Australia). "Climate change is increasingly considered a problem of 'security', yet what that means remains deeply contested. Behind the rhetoric of 'climate crisis', threats and 'emergencies', UN Security Council members offer profoundly different ideas about what climate change – and security – mean, and what should be done about it. This book brilliantly lays out the hidden or overlooked divergences of interests and perspectives on 'climate security' that are playing out in the world's most central security institution, as it grapples with securing a climate unstable world." (United Kingdom). "Security is a contested concept, whose scope and direction are subject to change. The prime value of this volume is the systematic documentation of the dynamics in defining what security is about in reaction to ever dramatic climate change. The book's focus on a somewhat representative sample of states – the members of the Security Council – provides robust evidence that even though many governments remain reluctant to retreat from traditional perceptions of security, there is a large and growing acceptance of the need to adjust priorities in providing security in response to climate change and its consequences." Michael Brzoska, Professor and Senior Research Fellow, IFSH Institute for Peace Research and Security Policy, Universität Hamburg (Germany). "The climate security literature has often been labelled as West-centric with little recognition of knowledge production processes, and different historical, socio-economic, and political experiences of and from

societies in the Global South. This book goes beyond the conventional approaches to provide a whole range of perspectives on climate security reflective of diverse contextual realities - covering factors such as development imperatives, conflict dynamics, postcolonial legacies, institutional/actor complexities, and geopolitical contestations, among others. By focusing on the climate security approaches of various countries (case studies) at the domestic and international levels, the applicability of existing climate security frameworks (or lack thereof) in the context of these case studies is brilliantly brought out by the chapters. This book weaves together these diverse perspectives by providing a comprehensive overview of climate security-related policies of countries from both Global South and Global North; and their positions on climate change and security in the UNSC. They reflect the varying norms, interests, priorities, and challenges that continue to

shape the climate security agenda within the UNSC as well as non-UNSC platforms. This book is a must read for anyone interested in gaining an in-depth and invigorating understanding of the evolution of distinct climate security discourses and practices in varying contexts." Dhanasree Jayaram, Assistant Professor, Department of Geopolitics and International Relations, Manipal Academy of Higher Education (MAHE) (India), Research Fellow. Centre Marc Bloch. "Climate Security in the Anthropocene provides a timely and compelling account of the conceptualizations of the climate security nexus and their implications. By considering climate security through the lenses of national, human and ecological security it provides a sophisticated account of the different dimensions involved in the UNSC debates and beyond. The collection of chapters illustrating the positions of the members of the UN Security Council in 2020, not only provide an informative account but also sheds light on the

challenges that the UNSC faces in dealing with climate change." Maria Julia Trombetta, Associate Professor in Politics and Environment, School of International Studies, Institute of Asia and Pacific Studies, University of Nottingham Ningbo China (China). "The book "Climate Security in the Anthropocene" is the first systematic assessment of climate security decision-making and governance of the UN Security Council. It is groundbreaking as it combines empirical bottom-up case studies of perceptions and policies of different ministries and governmental agencies of UNSC member states with a novel theoretical framework contrasting different security framings and conceptions in the Anthropocene. Discussing various policy sectors, the study assesses barriers and opportunities and provides novel insights on multi-scale responses and interactions in the climate-security nexus from local to global levels, connecting individuals, future generations, international

institutions and states. The book is highly recommendable for everyone interested in the emerging field of policy-oriented climate-security research." Jürgen Scheffran, Professor for Integrative Geography, Head of the Research Group, "Climate Change and Security" (CLISEC), Center for Earth System Research and Sustainability, Universität Hamburg (Germany). "This volume provides multifocal insights into the climate/security nexus, combining critical security studies and international relations theories in the age of the Anthropocene. Analyzing the perceptions, policies, and positions of 15 UN Security Council member states, this thought-provoking piece demonstrates how national security, human security, and ecological security have advanced as conceptual innovations. Offering a rich and diverse range of empirical case studies, this piece is a strong contribution to academic discourse and teaching alike."

Adaptation to Climate Change

2010-10-18 Mark Pelling The impacts of climate change are already being felt. Learning how to live with these impacts is a priority for human development. In this context, it is too easy to see adaptation as a narrowly defensive task – protecting core assets or functions from the risks of climate change. A more profound engagement, which sees climate change risks as a product and driver of social as well as natural systems, and their interaction, is called for. Adaptation to Climate Change argues that, without care, adaptive actions can deny the deeper political and cultural roots that call for significant change in social and political relations if human vulnerability to climate change associated risk is to be reduced. This book presents a framework for making sense of the range of choices facing humanity, *Kota Dan Perubahan Iklim Pdf Pdf upload Mita y Paterson*

structured around resilience (stability), transition (incremental social change and the exercising of existing rights) and transformation (new rights claims and changes in political regimes). The resilience-transition-transformation framework is supported by three detailed case study chapters. These also illustrate the diversity of contexts where adaption is unfolding, from organizations to urban governance and the national polity. This text is the first comprehensive analysis of the social dimensions to climate change adaptation. Clearly written in an engaging style, it provides detailed theoretical and empirical chapters and serves as an invaluable reference for undergraduate and postgraduate students interested in climate change, geography and development studies.

Establishing Plus-Minus-Energy-Regions

2022-01-31 Dieter D. Genske This book explains and illustrates how Indonesia as the *Download from vla.ramtech.uri.edu on December 7, 2023 by Mita y Paterson*

largest and most populous country in Southeast Asia can become independent of fossil fuels by both reducing its energy needs and using renewable resources. A study presented in this work focuses on the Maluku Archipelago in eastern Indonesia with Ambon as its capital. Conventional energy is brought to the islands over long distances by partly simple means as boats, ships and aircrafts. This unsustainable situation calls for a decentralized renewable energy supply strategy. Based on the research presented in this book, it is clear that the archipelago has the potential to become a so-called plus-minus region. Plus-minus regions are regions that produce more renewable energy than they need and capture more CO₂ than they emit. The authors are convinced that the presented strategy illustrated on the Maluku Archipelago can be transferred to other regions of the world and that only by developing plus-minus regions the international 2°C climate goal can be achieved. The

model region thus serves as proof that the plus-minus target can also be achieved in emerging countries with limited financial resources.

The Urban Climate Challenge

2015-02-20 Craig Johnson
Drawing upon a variety of empirical and theoretical perspectives, The Urban Climate Challenge provides a hands-on perspective about the political and technical challenges now facing cities and transnational urban networks in the global climate regime. Bringing together experts working in the fields of global environmental governance, urban sustainability and climate change, this volume explores the ways in which cities, transnational urban networks and global policy institutions are repositioning themselves in relation to this changing global policy environment. Focusing on both Northern and Southern experience across the globe, three questions that have strong bearing on the way

which we understand and assess the changing relationship between cities and global climate system are examined. The Urban Climate Challenge will be of interest to scholars of urban climate policy, global environmental governance and climate change. It will be of interest to readers more generally interested in the ways in which cities are now addressing the inter-related challenges of sustainable urban growth and global climate change. agreements and national policies on climate change. This book provides a critical analysis of the role of cities in addressing climate change and the prospects for urban sustainability. Cities and Climate Change is the first in-depth analysis of the role of cities in addressing climate change. The book argues that key challenges concerning the resources and powers of local government, as well as conflicts between local goals for economic development and climate change mitigation, have restricted the level of local action on climate change. These findings have significant implications for the prospects of mitigating climate change and achieving urban sustainability. This book provides a valuable interdisciplinary analysis of these issues, and will appeal to students and researchers interested in sustainability at local and global scales.

Climate change is one of the most significant global challenges facing the world today. It is also a critical issue for the world's cities. Now home to over half the world's population, urban areas are significant sources of greenhouse gas emissions and are vulnerable to the impacts of climate change. Responding to climate change is a profound challenge. A variety of actors are involved in urban climate governance, with municipal governments, international organisations, and funding bodies pointing to cities as key arenas for response. This book provides the first critical introduction to these challenges, giving an overview of the science and policy of climate change and the role of cities.

level and the emergence of climate change as an urban policy issue. It considers the challenges of governing climate change in the city in the context of the changing nature of urban politics, economics, society and infrastructures. It looks at how responses for mitigation and adaptation have emerged within the city, and the implications of climate change for social and environmental justice. Drawing on examples from cities in the north and south, and richly illustrated with detailed case-studies, this book will enable students to understand the potential and limits of addressing climate change at the urban level and to explore the consequences for our future cities. It will be essential reading for undergraduate students across the disciplines of geography, politics, sociology, urban studies, planning and science and technology studies.

A term paper is a scholarly paper written by students over an academic term, accounting for a significant part of a grade. Its a crucial component of your college education, often assigned towards the conclusion of a semester. The paper is a vehicle through which educators gauge your comprehension of the course content. Writing a term paper isnt just about summarizing facts. It requires a mix of organization, deep research, and the art of presenting your findings in a way thats both clear and analytical. This means structuring your arguments logically, citing relevant sources, and critically evaluating the information youve gathered. When grading a term paper, there are three important aspects to consider. First, the paper should be passionately written and captivating to read. Second, it should have good grammar and style (following MLA, APA, or CMS style). Third, it should be well documented with in-text references (in parentheses) linking their assertions to scholarly articles in the list of references at the end of the paper.
