have been taken over more than a century to prevent the transmission of pathogenic organisms and contagious diseases from animals to humans. Various factors influence the quality and safety of meat including public health hazards (zoonotic pathogens, chemical substances and veterinary drugs), animal health and welfare issues during transport and slaughter. Meat inspection is one of the most important programs in improving food safety, and its scope has enlarged considerably over the last decades. Globalization has affected the complexity of the modern meat chain and has provided possibilities for food fraud and unfair

competition. During the last two decades many food fraud cases have been reported, which have caused concern among consumers and the industry. Subsequently meat inspection is faced with new challenges. Meat Inspection and Control in the Slaughterhouse is an up-to-date reference book that responds to these changes and reflects the continued importance of meat inspection for the food industry. The contributors to this book are all international experts in the areas of meat inspection and the official controls limited to slaughterhouses, providing a rare insight into the international meat trade. This book will be of importance to students, professionals and members of the research community worldwide who aim to improve standards of meat inspection procedures and food safety.

Animal (De)liberation 2016-07-28 Jan Deckers
In this book, Jan Deckers addresses the most crucial question that people must deliberate in relation to how we should treat other animals: whether we should eat animal products. Many people object to the consumption of animal products

from the conviction that it inflicts pain, suffering, and death upon animals. This book argues that a convincing ethical theory cannot be based on these important concerns: rather, it must focus on our interest in human health. Tending to this interest demands not only that we extend speciesism—the attribution of special significance to members of our own species merely because they belong to the same species as ourselves—towards nonhuman animals, but also that we safeguard the integrity of nature. In this light, projects that aim to engineer the genetic material of animals to reduce their capacities to feel pain and to suffer are morally suspect. The same applies to projects that aim to develop in-vitro flesh, even if the production of such flesh should be welcomed on other grounds. The theory proposed in this book is accompanied by a political goal, the ‘vegan project’, which strives for a qualified ban on the consumption of animal products. Deckers also provides empirical evidence that some support for this goal exists

already, and his analysis of the views of others—including those of slaughterhouse workers—reveals that the vegan project stands firm in spite of public opposition. Many charges have been pressed against vegan diets, including: that they alienate human beings from nature; that they increase human food security concerns; and that they are unsustainable. Deckers argues that these charges are legitimate in some cases, but that, in many situations, vegan diets are actually superior. For those who remain doubtful, the book also contains an appendix that considers whether vegan diets might actually be nutritionally adequate.

consumption, and activism. Agriculture is having a lasting effect on this planet. Some forms of agriculture are especially harmful. For example, industrial animal agriculture kills 100+ billion animals per year; consumes vast amounts of land, water, and energy; and produces vast amounts of waste, pollution, and greenhouse gas emissions. Other forms, such as local, organic, and plant-based food, have many benefits, but they also have many costs, especially at scale. These impacts raise difficult ethical questions. What do we owe animals, plants, species, and ecosystems? What do we owe people in other nations and future generations? What are the ethics of risk, uncertainty, and collective harm? What is the meaning and value of natural food in a world reshaped by human activity? What are the ethics of supporting harmful industries when less harmful alternatives are available? What are the ethics of resisting harmful industries through activism, advocacy, and philanthropy? The discussion ranges over cutting-edge topics such

accessible, authoritative book covers all aspects of Halal from its origins through to how we expect Halal to develop in the coming years. It explains what Halal is, where it came from, how it is practiced, and by whom. In addition to putting Halal in a religious and cultural context, the book provides practical standards for those working in the Halal trade. It explains why there are so many different interpretations of Halal and why this needs to be resolved if international trade is to be developed. Each chapter in The Halal Food Handbook is written by leading experts in their particular field of study. The first one discusses how regulatory bodies have failed to stem the miss selling and adulteration of Halal foods. The next chapters cover the slaughter process and issues around good practice. The book then looks at regulators—covering Sharia law, UK national laws, and the EU—and outlines the legal framework for enforcing the law. It also compares and contrasts different types of religious slaughter for faith foods; examines attempts to

set an international standard for trade; and discusses pork adulteration in Halal foods. The final chapter covers other aspects of Halal, including cosmetics, tourism, lifestyle, and banking, and finishes with a look at what the future holds for Halal. Written and edited by leading international experts in Halal who are backed by the Muslim Council of Britain Presents a set of good practice standards for both producers and consumers of Halal food Covers the complexity of the political, legal, and practical dimensions of Halal food production The Halal Food Handbook will appeal to a wide audience, including abattoirs, manufacturers, retailers, regulators, academics, public bodies catering for Muslims, and the broader Muslim community.

by presenting a global overview, examining the role that livestock play in human nutrition, the world food supply access to food particularly for poor families. Next it moves from the global level to a human perspective, examining the way in which livestock contributes to the food security of three different human populations-livestock-dependent societies, small-scale mixed farmers and urban dwellers. The final part of the report looks to the future. It discusses the expected demand for livestock source food and the way that increased demand can be met with ever more limited resources. It reviews the drivers that led to the livestock revolution, how these have changed and what the implications will be for livestock contributing to resilient food systems of the future. Book jacket.

Halal Food 2018-04-02 Febe Armanios Food trucks announcing "halal" proliferate in many urban areas but how many non-Muslims know what this means, other than cheap lunch? Here Middle Eastern historians Febe Armanios and Bogac Ergene provide an accessible introduction to halal (permissible) food in the Islamic tradition, exploring what halal food means to Muslims and how its legal and cultural interpretations have changed in different geographies up to the present day. Historically, Muslims used food to define their identities in relation to co-believers and non-Muslims. Food taboos are rooted in the Quran and prophetic customs, as well as writings from various periods and geographical settings. As in Judaism and among certain Christian sects, Islamic food traditions make distinctions between clean and impure, and dietary choices and food preparation reflect how believers think about broader issues. Traditionally, most halal interpretations focused on animal slaughter and the consumption of intoxicants. Muslims today,

however, must also contend with an array of manufactured food products--yogurts, chocolates, cheeses, candies, and sodas--filled with unknown additives and fillers. To help consumers navigate the new halal marketplace, certifying agencies, government and non-government bodies, and global businesses vie to meet increased demands for food piety. At the same time, blogs, cookbooks, restaurants, and social media apps have proliferated, while animal rights and eco-conscious activists seek to recover halal's more wholesome and ethical inclinations. Covering practices from the Middle East and North Africa to South Asia, Europe, and North America, this timely book is for anyone curious about the history of halal food and its place in the modern world.

Political Ecologies of Meat 2015-05-15 Jody Emel Livestock production worldwide is increasing rapidly, in part due to economic growth and demand for meat in industrializing countries. Yet there are many concerns about the sustainability of increased meat production and consumption, from perspectives including human health, animal welfare, climate change and environmental pollution. This book tackles the key issues of contemporary meat production and consumption through a lens of political ecology,

which emphasizes the power relations producing particular social, economic and cultural interactions with non-human nature. Three main topics are addressed: the political ecology of global livestock production trends; changes in production systems around the world and their implications for environmental justice; and existing and emerging governance strategies for meat production and consumption systems and their implications. Case studies of different systems at varying scales are included, drawn from Asia, Africa, the Americas and Europe. The book includes an editorial introduction to set the context and synthesize key messages for the reader.

to explore the economies, culture and politics of food. This is the first text to provide a much-needed overview of this strongly debated area of the food industry. From the practicalities and limitations of establishing a basic standard of care for livestock, to the ethics of selling welfare as a product in the supermarket, this indispensable book offers empirical insights into a key aspect of the global food system: the lives, deaths, and consumption of animals which are at the core of the food chain. It is a must-read for students and scholars of animal welfare, agro-food studies and human-animal relations in disciplines such as geography, politics, anthropology, and sociology as well as animal behaviour, psychology and veterinary science.

Animals as Food 2015-07-01 Amy J. Fitzgerald
Every day, millions of people around the world sit down to a meal that includes meat. This book explores several questions as it examines the use of animals as food: How did the domestication and production of livestock animals emerge and why? How did current modes of raising and slaughtering animals for human consumption develop, and what are their consequences? What can be done to mitigate and even reverse the impacts of animal production? With insight into the historical, cultural, political, legal, and economic processes that shape our use of animals as food, Fitzgerald provides a holistic picture and explicates the connections in the supply chain that are obscured in the current mode of food production. Bridging the distance in

animal agriculture between production, processing, consumption, and their associated impacts, this analysis envisions ways of redressing the negative effects of the use of animals as food. It details how consumption levels and practices have changed as the relationship between production, processing, and consumption has shifted. Due to the wide-ranging questions addressed in this book, the author draws on many fields of inquiry, including sociology, (critical) animal studies, history, economics, law, political science, anthropology, criminology, environmental science, geography, philosophy, and animal science.

Animal to Edible 1994-06-16 Noilie Vialles
Why do we find it necessary to slaughter living animals in order to enjoy their flesh? And why does this act offend our sensibilities, without necessarily making us into vegetarians? We no longer tolerate sacrifices, public butchering during festivals, butchers operating openly in the

middle of our cities. Today, animals are killed in invisible abattoirs, set a good distance from our normal activities. This recent separation between the slaughter-house and the butcher's establishment is somehow essential to the modern meat diet. In her study of abattoirs in south-west France, Noélie Vialles brings to light a complex system of avoidances. Her analysis reveals that beyond the specific denial of the work of the abattoirs lies a whole system of symbolic representations of blood, human beings and animals, a symbolic code that determines the way in which we prepare domestic animals for the table.

Animal Biotechnology 2002-12-29 National Research Council Genetic-based animal biotechnology has produced new food and pharmaceutical products and promises many more advances to benefit humankind. These exciting prospects are accompanied by considerable unease, however, about matters such as safety and ethics. This book identifies science-based and policy-related concerns about animal biotechnologyâ€"key issues that must be resolved before the new breakthroughs can reach their potential. The book includes a short history of the field and provides understandable

definitions of terms like cloning. Looking at technologies on the near horizon, the authors discuss what we know and what we fear about their effects—the inadvertent release of dangerous microorganisms, the safety of products derived from biotechnology, the impact of genetically engineered animals on their environment. In addition to these concerns, the book explores animal welfare concerns, and our societal and institutional capacity to manage and regulate the technology and its products. This accessible volume will be important to everyone interested in the implications of the use of animal biotechnology.

The second chapter deals with sur vival of pathogens (which cause foodborne illness) in manure environments. An evaluation of the human health hazard likely to occur from the use of ma nure as fertilizer is important because of the recent trend toward an increase in foodborne illness from the consumption of minimally processed fruits and vegetables that may have been fertilized with animal-derived organic materials.

For a Moment of Taste 2020-03-05 Poorva Joshipura For a Moment of Taste is the first ever in-depth expose of what happens to animals commonly used for meat, eggs and dairy foods in India for what is, after all, a fleeting moment of taste. It gives a historical account of how today's meat, eggs and dairy production systems came to be; the current state of these industries in India; and the consequences of where they are headed if dietary habits and current trends do not change. Poorva Joshipura, a senior member of the People for the Ethical Treatment of Animals (PETA), draws on her personal observations of the treatment of animals and uncovers shocking industry practices not commonly known in India. She also explores the larger philosophical question of whether humans are meant to consume meat, eggs or dairy foods, provides anthropological evidence to the contrary, and also lays out the human health and environmental impacts of the production and consumption of animal-based products. Geographies of Meat 2017-03-16 Harvey Neo With the ever rising demand for meat around the world, the production of meat has changed dramatically in the past few decades. What has brought about the increasing popularity and attendant normalization of factory farms across many parts of the world? What are some of the ways to resist such broad convergences in meat production and how successful are they? This book locates the answers to these questions at the intersection between the culture, science and political economy of meat production and consumption. It details how and why techniques of production have spread across the world, albeit in a spatially uneven way. It argues that the modern meat production and consumption sphere is the outcome of a complex matrix of cultural politics, economics and technological faith. Drawing from examples across the world

(including America, Europe and Asia), the tensions and repercussions of meat production and consumption are also analyzed. From a geographical perspective, food animals have been given considerably less attention compared to wild animals or pets. This book, framed conceptually by critical animal studies, governmentality and commodification, is a theoretically driven and empirically rich study that advances the study of food animals in geography as well as in the wider social sciences.
