The Concept of Strategic Fit

2011-06 Moritz Garlichs Matching an organization's strategy and structure to explain firm performance is one of the fundamental insights in strategic management literature. Successful organizations achieve strategic fit and support their strategy with appropriate structures and processes, while less successful firms typically exhibit poorer fit. Hence, firms will strive for the ideal fit to reach highest performance and outperform those that do not. However, recent developments raise the question if the concept still works today. To answer that question, this study analyzes the concept of strategic fit and examines the different research streams. In order to reach this goal, the empirical literature is classified according to different perspectives and domains of fit and the empirical findings are aggregated and evaluated. Based on the analysis of 105 identified studies publicized

between 1962 and 2010, different research streams are highlighted and it is suggested that the performance implications of strategic fit are still valid today.

The second part explores the development of organizational and management concepts. The next section discusses the interaction between organizations and the environment and organizational goals. In the fourth section, the impact of technology on the organization is examined. Next, the psychosocial system of the organization is described, including behavior, motivation, and group dynamics. The sixth part addresses the decision-making role of managers and includes sections on planning and control. The final section discusses comparative analysis and contingency views. Included in this section are three chapters which serve as case studies for examining the systems approach in a hospital, university, and city.
