A Course in Quantitative Chemical Analysis Gravimetric and Volumetric (Classic Reprint) 2015-07-04 Nicholas Knight Excerpt from A Course in Quantitative Chemical Analysis Gravimetric and Volumetric In the following pages methods for complete analyses are outlined, and substances have been selected for analysis which, it is believed, will illustrate the more common methods of separating and determining the parts of a compound or mixtures of compounds. In some determinations, two or more methods are outlined. In other cases, even though only one process is suggested, it should be borne in mind that there is often a choice of several methods, and the same result can often be attained in many different ways. The larger works should be freely consulted by the student that he may become acquainted with the variety of processes that are more or less in common use. The work is graduated, and both in the gravimetric and volumetric divisions proceeds from simpler substances and operations to the more complex. The arrangement is such that any part may be omitted to suit the time and convenience of the student. The ionic theory is now quite generally employed to explain chemical reactions. The theory is usually studied in the courses in general chemistry, and it has not been deemed necessary to introduce the subject here. Introductory Titrimetric and Gravimetric Analysis 2016-06-06 Evelyn M. Rattenbury Introductory Titrimetric and Gravimetric Analysis discusses the different types of titration and the weighing of different solutions in solid form. Coverage is made on acid- base titration, argentometric titrations, and oxidation- reduction titrations. Iodometric titrations and complexometric titrations are also explained. Extensive discussion on each of the titration method, along with some examples and laboratory experiments, is given. The process of weight measurement of damp powder is one example of the experiments. The book is a manual that guides a student to the correct ways of conducting an experiment made on such solutions as sodium hydroxide using hydrochloric acid and oxalic acid. Outcome of such experiments in terms of composition, weight of solutions, and measurement of pressure in certain environment is tabulated and briefly explained. Logarithms and antilogarithms are included at the end of the book. The text will serve as a good laboratory manual for students preparing for science examination as well as for chemists and chemical engineers.

Quantitative Chemical Analysis 2013-04-26 Na Li This book covers both fundamental and practical aspects of chemical analysis: Data Process and Analysis; Chemical Equilibria and Volumetric titrations; Gravimetry; Spectrophotometry; Sample Preparation and Separation Methods in Quantitative Analysis. It was written with the rich tradition of teaching at Peking University College of Chemistry, and edited by an American professor who was personally sensitive to the needs of students learning science from traditional chemistry textbooks written in English. Many examples and illustrative problems in this text have been taken from previous textbooks by the Peking University Team Teaching Program. The book can be used as a starter in analytical chemistry which is fundamental and the base upon which chemistry is built. Traditional chapters of initial learning in analytical chemistry are included, such as volumetric, gravimetric and separation methods; the book also includes key chapters on problem solving relating to recent progress in analytical chemistry.

Hydrogen Generation, Storage and Utilization 2014-04-02 Jin Zhong Zhang The potential use of hydrogen as a clean and renewable fuelresource has generated significant attention in recent years,especially given the rapidly increasing demand for energy sourcesand the dwindling availability of fossil fuels. Hydrogen is an“ideal fuel” in several ways. Its only byproduct ofconsumption is water; it is the most abundant element in theuniverse; and it is available at low cost. Hydrogen generation impossible via a number of possible chemical processes, to separatethe hydrogen from its bond with atoms such as carbon, nitrogen, andoxygen. In this book, the authors provide the scientific foundations forestablished and innovative methods of hydrogen extraction; outlinesolutions for its storage; and illustrate its applications in thefields of petroleum, chemical, metallurgical, physics, andmanufacturing. Addresses the three fundamental aspects of hydrogen as a fuelresource: generation, storage, and utilization Provides theoretical basis for the chemical processes requiredfor hydrogen generation, including solar, photoelectrochemical,thermochemical, and fermentation methods Discusses storage of hydrogen based on metal hydrides,hydrocarbons, high pressure compression, and cryogenics Examines the applications of hydrogen utilization in the fieldsof petroleum, chemical, metallurgical, physics, andmanufacturing Contains over 90 figures, including 27 color figures

A Text-Book of Quantitative Chemical Analysis (Classic Reprint) 2018-02-19 Alexander Charles Cumming Excerpt from A Text-Book of Quantitative Chemical Analysis This book is intended primarily for University and College students, and in planning it we have not overlooked the fact that those who study Chemistry as a subsidiary subject usually devote so short a time to it that it is impossible for them to cover any comprehensive course, and that, even when Chemistry is one of the main subjects of study, the student, as a rule, has a strictly limited time for laboratory work. We have endeavoured, therefore, to arrange the book in such a manner that some knowledge of the principles of Quantitative Analysis may be acquired by a practical study of the subjects included in Parts I., II., and III., and that the further requirements of those who are making a special study of Chemistry should be met by the later portions of the book. Volumetric Analysis is dealt with in Part II. Before Gravi metric Analysis, partly because the manipulation is easier, and partly because the exercises in Volumetric Analysis present a greater variety than those in simple Gravimetric Analysis. The educative value of volumetric methods is probably greater than that of any other branch of analysis, and we are of opinion that a student should receive a thorough training in Volumetric Analysis' even if the time remaining at his disposal permits of little or no gravimetric work. Periodontal disease can be diagnosed by a dentist or a periodontist after reviewing the complete medical history and also physical examination of the teenager’s mouth. Usually x-ray of the teeth is taken to evaluate the disease. Periodontal disease is classified into different types based on what stage the disease is in. The mildest form of gum disease is known as “gingivitis” in which gums become swollen, red and tender resulting in bleeding while daily brushing and flossing. Gingivitis is again divided into 4 groups primarily acute, sub-acute, recurrent and chronic. Acute gingivitis is nothing but sudden appearance which lasts for shorter duration and could be painful. Sub-acute gingivitis is less severe type of gingivitis. Recurrent gingivitis is the one that comes back after treatment. Chronic gingivitis is the one that onsets slowly, lasts longer and is generally painless. A dentist’s treatment and proper and continuous care can easily solve the problem of gingivitis but if left untreated could result in periodontitis.

Periodontitis is further classified into mild and moderate to advance. Periodontitis results from untreated gingivitis. In this stage the deterioration of the bone in the vicinity of the tooth becomes evident. The common symptoms include red gums that bleed; mouth tastes bad; loose teeth; tooth loss. Proper treatment is a must to control the disease and prevent further deterioration. Periodontitis which is in moderate to advanced stage shows signs of major loss of tissue and bone loss near the teeth.

There are various treatments available for periodontal disease which is decided by the dentist depending on teenager’s age, medical history and health in general. The method of treatment also depends on the extent to which disease has reached. The tolerance of the teenager to certain medicines, therapies and procedures are also taken into consideration. Expectations and opinion of the parents or teenager is also the criteria in deciding the type of treatment. The treatment usually involves plaque removal, medication and in worse cases a surgery.

The first myth is that acupuncture is painful. This is not true because those who have tried it claimed they only experienced a tiny prick while others did not feel anything at all. One of the most debated issues between the East and the West is the use of acupuncture as a western means of medical treatment. Even though this form of medicine has been used as an effective method for over five thousand years in China, there is no concrete evidence from scientific research studies that have proven the healing properties of acupuncture.

Skeptics shrug off the positive effects of acupuncture as merely placebo effects. Believers in acupuncture, however, say that the benefits have simply not yet been proven. Believers promote that the treatment is harmless and can be used as a complement to western medicine.

When adolescents wear braces they have to take certain precautions in order to avoid any more oral health complications. The most important precautionary measure is to brush the teeth regularly after every meal. Since the food can be easily lodged in braces, it is a good idea to brush carefully with soft bristles toothbrush and fluoride toothpaste. In the morning, the adolescent must floss between the braces and teeth. Food stuffs which are sticky or hard must be avoided as they are very difficult to remove. Foods like caramel, chew candy, popcorn, and nuts must be avoided. Cleaning must be done by the orthodontist or general dentist, every five to six months.

The wisdom teeth or third molars can grow in people of the age fifteen to twenty five. These teeth cause problem, because most of the mouths are too small to adjust new teeth and hence they need to be removed. If the wisdom tooth has place to grow, without affecting other teeth, they can be left to themselves. But if the adolescent experiences pain, facial swelling, mouth infection and gum-line swelling, then they should be extracted immediately. They can also destroy the second molars and impact other tooth. Various gum and jaw diseases can be caused. There can be a tumor development; cysts development and plaque build up. Hence, a surgery is performed to remove the tooth or teeth.

The gum tissue covering the wisdom tooth is removed and the connective tissue connecting the tooth to the bone is detached. The tooth is then removed and the opening is sutured. A general dentist can perform wisdom tooth surgery in the local office using anesthesia.

Five times common than asthma is tooth cavities. The tooth above the gum line is made up of enamel, the hardest tissue within the human body. The tooth below the gum-line comprise of nerves, roots and dentin. Dentin is another type of tissue and isn't as hard as the enamel. The acid which leads to tooth decay is produced by bacteria. These acids, along with dietary sugar, attach the enamel and eat away the minerals within the enamel, until a cavity is formed. This is known as tooth cavity. The biggest prevention against dental cavities is brushing teeth twice a day and even better, after every meal with fluoride toothpaste and soft bristle toothbrush. Carbonated drinks must be avoided strictly and must be replaced with fruit juices and sugary food must be avoided. Intake of fluoridated water also helps a lot or fluoride supplements can be used as replacement.

How does needle puncture work?

Practitioners of Chinese traditional medicine believe in energy flows. This energy, called Qi, circulates around the body using pathways called meridians. Meridians run very close to the surface of the skin in certain areas and can be accessed by needles. Much like plumbing, these pipes can get blocked or go the wrong way, causing health problems. The insertion of needles at these points is aimed to help loosen blocks and normalize flow.

Anemia in Adolescents

To understand what is anemia one should begin with breathing. The oxygen that is inhaled simply doesn't stop in lungs. It circulates though out the body and fuels the brains also. Oxygen travels to all parts of the body though bloodstream and to be precise in the RBCs I.e. red blood cells. Now, these RBCs are produced in the bone marrow of the body and they serve as boats carrying oxygen in the bloodstream. RBCs have something called hemoglobin, a protein which holds oxygen. To make adequate hemoglobin body requires iron in plenty. The iron is supplied by the foods that we take along with other nutrients. When these RBCs are fewer in number than what is needed anemia occurs in the body. There can be 3 primary reasons: RBCs are lost due to some reason, the production of RBCs is slower than what is needed and lastly the body is destroying the RBCs. Different types of anemia are linked to at least one of these causes.

There are basically 14 pathways throughout the body where chi flows continuously. These are called the meridian points. In order for chi to course through the body unobstructed, there has to be a balance between the strengths of yin and yang. In ancient Chinese philosophy, yin and yang represent the forces of the universe- yin is for feminine, while yang is for masculine. Every single thing in the universe is believed to contain both yin and yang for harmony.

When the yin and yang are not balanced, chi cannot stream through the body liberally. Therefore, the meridian points through which chi courses through need to be stimulated. This is done by the insertion of hair-thin, disposable needles in specific areas on a person's body to induce bodily harmony and bring about healing.
