Toward a Transpersonal Ecology Warwick Fox 1995-01-01 In this book I advance an argument concerning the nature of the deep ecology approach to ecophilosophy. In order to advance this argument in as thorough a manner as possible, I present it within the context of a comprehensive overview of the writings on deep ecology.

TransEvolution Daniel Estulin 2014-01-01 Arguing that the race to better humankind is about to go to a new dimension as a result of a nanotechnological revolution, this enthralling read purports that the depth of progress and technological development is such that people in the very near future may no longer be fully human. TransEvolution discusses the transition from human to someone—or something—new and different and the increasing trend of implementing prosthetics, organ implants, bionic eyes, hearing aids, and other technological augmentations. Humans are capable of doing things they never imagined would be possible 20 years ago, and the rapid growth of this trend is nowhere near its end. But do the benefits of these advancements come with a price? Is humanity in danger because of this domination of science and technology? Bestselling author Daniel Estulin describes his vision of the future in which he believes the elite will employ their Promethean plans.

The Tao of Liberation Mark Hathaway Drawing on insights from quantum physics, deep ecology, and the new cosmology, they articulate a new vision of liberating action. Hathaway and Boff lay out a path of spiritual renewal, ecological transformation, and authentic liberation.

Transactional Analysis Helena Hargaden 2014-04-23 Transactional analysis is growing in popularity as an approach to psychotherapy, and this book provides an in-depth, comprehensive model of theory and practice. Transactional Analysis: A Relational Perspective presents a relational model of psychotherapy which reflects the theoretical and methodological changes that have been evolving over recent years. In this book, Helena Hargaden and Charlotte Sills tell the story of their model through case history, theory and diagram illustrating how the unconscious process comes to life in the consulting room. Their relational theory and applied methodology of transactional analysis makes it possible to chart realms of uncertainty and the unknown, (deconfusion of the Child ego state), with theoretical assistance. Transactional Analysis: A Relational Perspective covers: * the approach * the dynamics of the relationship * therapeutic transactions * wider implications. It looks at the whole therapeutic relationship, from the establishment of the working alliance, to the terminating of therapy and beyond. It will be of great interest to postgraduates and professionals in the field of psychotherapy.

Ecopsychology Vladimir Antonov 2012-03-25 This book is written in a simple and easy-to-understand language by scientist-biologist Dr. Vladimir Antonov. It covers the essential issues: what is God, the place of human being in the Evolution of the Universal Consciousness, principles of forming and correction of destiny, ways of attaining health and happiness, most effective methods of psychic self-regulation, about spiritual development and cognition of God. *Management Education and Humanities* Barbara Czarniawska-Joerges 2006 Academics and managers who strive for a humanistic management education usually care for people, but they are challenged by sophisticated intellectual subjects and practical problems. The authors' experience, competence and commitment enables them to present an extensive coverage of important views and an in-depth study of these issues. Eduard Bonet, ESADE, Spain This volume is a timely initiative. It resonates with important questions on globalization and its consequences, on the unrelenting quest for efficiency and productivity, on recent corporate scandals and on the responsibilities of managers and management education. This book is a manifesto for an intellectual revolution. In a complex and open world, managers often bump into the limits of the decontextualized tools associated with mainstream management knowledge and practice. Managers have to navigate in a world that is not only economic but also political, cultural, shaped by history and ethical traditions and preoccupations not only as a mark of social capital but really as a way to enhance their managerial skills and efficiency. The role of management education should be to prepare them for that odyssey and this volume tells us that humanities could be a powerful tool in that sense. This project is served by a highly legitimate international panel of contributors who collectively point towards an alternative for management thinking and management education. Marie-Laure Djelic, ESSEC Business School, France Management Education and Humanities argues that management teachers and researchers seem to be increasingly dissatisfied with the way managers are usually educated in western countries. It claims that educational practices and methods would greatly benefit from reflection on the implicit assumptions and paradigms behind those practices, and debates the role that humanism and humanities might play in the formation of new managerial élites. The book examines three themes that have emerged as central to the contemporary debate on management education: the profession of management; humanism as a philosophy and worldview; and the humanities as an academic field where management schools could find new inspirations for curricula. All three themes are scrutinized in a frame of reference extended between two different points of view: the traditional view, with its tendency to idealize (and even sometimes romanticize) humanism, the humanities and management as a social function; and the past-modern view, which is inclined to skepticism and to the deconstruction of social and cultural phenomena. Providing a lively account of this ongoing debate and exploring new trends and experiences in management education, this book will be invaluable reading for teachers, students and researchers of management, management strategy, and organizational behaviour.

From Ego to Eco Sabine Lenore Müller 2018 From Ego to Eco - Mapping Shifts from Anthropocentrism to Ecocentrism investigates philosophical, political, and aesthetic formations of ecocentrism, arguing that ecocentrism is a phenomenon that can be observed in a broad variety of national and historical contexts.

The Oceans Eelco Rohling 2020-07-14 The 4.4-billion-year history of the oceans and their role in Earth's climate system It has often been said that we know more about the moon than we do about our own oceans. In fact, we know a great deal more about the oceans than many people realize. Scientists know that our actions today are shaping the oceans and climate of tomorrow—and that if we continue to act recklessly, the consequences will be dire. Eelco Rohling traces the 4.4-billion-year history of Earth's oceans while also shedding light on the critical role they play in our planet's climate system. This timely and accessible book explores the close interrelationships of the oceans, climate, solid Earth processes, and life, using the context of Earth and ocean history to provide perspective on humankind's impacts on the health and habitability of our planet.

Counseling Marcella Danon 2016-04-18 Il counselor è un professionista che accompagna le persone nell'affrontare situazioni di momentanea difficoltà: una scelta impegnativa, un problema da risolvere, un dissaporo relazionale. Opera attraverso il dialogo e l'attenta partecipazione, guidando il cliente nell'esaminare le situazioni da diversi punti di vista, nel riconoscere le proprie risorse interiori inesprese e nel ritrovare l'energia per affrontare i problemi. «Il cliente è l'esperto di se stesso» affermava Carl Rogers, ponendo le basi per questa professione – finalmente affermatasi anche in Italia – capace di creare un campo di relazione autentica, improntata all'ascolto, al rispetto e all'empatia. Il counseling è allo stesso tempo un'arte, perché sono proprio le qualità personali del counselor, più che una vera e propria tecnica, i fattori del successo di questo approccio, che unisce la professionalità di un operatore nella relazione di aiuto con la sensibilità e la disponibilità di un amico attento.

Gestalt Counselling in Action Petruska Clarkson 2004-09-18 Gestalt Counseling in Action is a bestselling text which has sold over 30,000 copies. Now in it's Third Edition, the book continues to be a popular text for training in counselling and psychotherapy and with practitioners who are new to the gestalt approach. Fully revised and updated, Gestalt Counselling in Action, Third Edition includes a new chapter which explores recent developments in the field and looks to the future for the gestalt approach.

Ecotherapy Howard Clinebell 2013-12-19 Here is a trailblazing book on issues of vital interest to the future of humankind. Ecotherapy: Healing Ourselves, Healing the Earth sheds light on humankind's most serious health challenge ever—how to save our precious planet as a clean, viable habitat. As a guide for therapists, health professionals, pastoral counselors, teachers, medical healers, and especially parents, Ecotherapy: Healing Ourselves, Healing the Earth highlights readers' strategic opportunities to help our endangered human species cope constructively with the unprecedented challenge of saving a healthful planet for future generations. Ecotherapy: Healing Ourselves, Healing the Earth introduces readers to an innovative approach to ecologically-grounded personality theory, spirituality, ecotherapy, and education. The book shares the author's well-developed theories and methods of ecological diagnosis, treatment, and education so professionals and parents, our most influential teachers, can rise to the challenge of saving our planet. Readers will find that the book helps them accomplish this goal as it: explores an expanded, ecologically grounded theory of personality development, the missing dimension in understanding human identity formation outlines a model for doing ecologically oriented psychotherapy, counseling, medical healing, teaching, and parenting describes life-saving perspectives for making one's lifestyle more earth-caring demonstrates the importance of hope, humor, and love suggests how these earthy approaches may be utilized in a variety of social contexts and cultures A systematic theory and practice guidebook, Ecotherapy: Healing Ourselves, Healing the Earth fills a wide gap in both the counseling and therapy literature and the ecology literature. It offers an innovative model for fulfilling the “ecological circle” between humans and nature with three action dimensions. These are self-care by being intentionally nurtured by nature; spiritual enrichment by enjoying the transcendent Spirit in nature; and responding by nurturing nature more responsibly and lovingly. The theories and practical applications presented in the book come together to explore long-overlooked issues at the boundary between human health and the health of the natural

environment. Psychotherapists, health professionals, and teachers; pastoral counselors and other clergy who counsel and teach; laypersons who are parents and grandparents; and individuals and groups interested in environmental issues will find Ecotherapy: Healing Ourselves, Healing the Earth essential for approaching the long-neglected earthy roots of the total human mind-body-spirit organism.

No Such Thing as Silence Kyle Gann 2010-03-23 First performed at the midpoint of the twentieth century, John Cage's 4'33", a composition conceived of without a single musical note, is among the most celebrated and ballyhooed cultural gestures in the history of modern music. A meditation on the act of listening and the nature of performance, Cage's controversial piece became the iconic statement of the meaning of silence in art and is a landmark work of American music. In this book, Kyle Gann, one of the nation's leading music critics, explains 4'33" as a unique moment in American culture and musical composition. Finding resemblances and resonances of 4'33" in artworks as wide-ranging as the paintings of the Hudson River School and the music of John Lennon and Yoko Ono, he provides much-needed cultural context for this fundamentally challenging and often misunderstood piece. Gann also explores Cage's craft, describing in illuminating detail the musical, philosophical, and even environmental influences that informed this groundbreaking piece of music. Having performed 4'33" himself and as a composer in his own right, Gann offers the reader both an expert's analysis and a highly personal interpretation of Cage's most divisive work.

The Voice of the Earth Theodore Roszak 2001-01-01 What is the bond between the human psyche and the living planet that nurtured us, and all of life, into existence? What is the link between our own mental health and the health of the greater biosphere? In this "bold, ambitious, philosophical essay" (Publishers Weekly), historian and cultural critic Roszak explores the relationships between psychology, ecology, and new scientific insights into systems in nature. Drawing on our understanding of the evolutionary, self-organizing universe, Roszak illuminates our rootedness in the greater web of life and explores the relationship between our own sanity and the larger-than-human world. The Voice of the Earth seeks to bridge the centuries-old split between the psychological and the ecological with a paradigm which sees the needs of the planet and the needs of the person as a continuum. The Earth's cry for rescue from the punishing weight of the industrial system we have created is our own cry for a scale and quality of life that will free us to become whole and healthy. This second edition contains a new afterword by the author.

Histoire D'un Ruisseau Elisée Reclus Elisée Reclus 2020-07-22 L'histoire d'un ruisseau, même de celui qui naît et se perd dans la mousse, est l'histoire de l'infini. Ces gouttelettes qui scintillent ont traversé le granit, le calcaire et l'argile; elles ont été neige sur la froide montagne, molécule de vapeur dans la nuée, blanche écume sur la crête des flots; le soleil, dans sa course journalière, les a fait resplendir des reflets les plus éclatants; la pâle lumière de la lune les a vaguement irisées; la foudre en a fait de l'hydrogène et de l'oxygène, puis d'un nouveau choc a fait ruisseler en eau ces éléments primitifs. Tous les agents de l'atmosphère et de l'espace, toutes les forces cosmiques ont travaillé de concert à modifier incessamment l'aspect et la position de la gouttelette imperceptible; elle aussi est un monde comme les astres énormes qui roulent dans les cieux, et son orbite se développe de cycle en cycle par un mouvement sans repos.

For Self-Examination and Judge for Yourselves! Søren Kierkegaard 2019-04-30 For Self-Examination and its companion piece *Judge for Yourself!* are the culmination of Soren Kierkegaard's "second authorship," which followed his *Concluding Unscientific Postscript*. Among the simplest and most readily comprehended of Kierkegaard's books, the two works are part of the signed direct communications, as distinguished from his earlier pseudonymous writings. The lucidity and pithiness and earnestness and power, of *For Self-Examination and Judge for Yourself!* are enhanced when, as Kierkegaard requested, they are read aloud. They contain the well-known passages on Socrates' defense speech, how to read, the lover's letter, the royal coachman and the carriage team, and the painter's relation to his painting. The aim of awakening and inward deepening is signaled by the opening section on Socrates in *For Self-Examination* and is pursued in the context of the relations of Christian ideality, grace, and response. The secondary aim, a critique of the established order, links the works to the final polemical writings that appear later after a four-year period of silence. Originally published in 1944. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

The Philosophy of Giambattista Vico Benedetto Croce 1913

The Voice of the Earth Theodore Roszak 1992 prevailing Reality Principle would have it, nothing could be greater madness than to believe that beast and plant, mountain and river have a 'point of view.'" The Voice of the Earth seeks to bridge this centuries-old split between the psychological and the ecological. A true "ecopsychology," Roszak insists, sees the needs of the planet and the needs of the person as a continuum. In a sense that weaves science and psychiatry, poetry and politics together, he shows that.

Plan B 3.0: Mobilizing to Save Civilization Lester R. Brown 2008 Provides alternative solutions to such global problems as population control, emerging water shortages, eroding soil, and global warming, outlining a detailed survival strategy for the civilization of the future.

The Wolves of Mount McKinley Adolph Murie 2011-12-01 In the time of Lewis and Clark, wolves were abundant throughout North America from the Arctic regions to Mexico. But man declared war on this cunning and powerful animal when cattle replaced the buffalo on the western plains, reducing the wolf's range to those few areas in the Far North where economic necessity did not call for its extinction. Between 1939 and 1941, Adolph Murie, one of North America's greatest naturalists, made a field study of the relationship between wolves and Dall sheep in Mount McKinley National Park (since renamed Denali National Park) which has come to be respected as a classic work of natural history. In this study Murie not only described the life cycle of Alaskan wolves in greater detail than has ever been done, but he discovered a great deal about the entire ecological network of predator and prey. The issues surrounding the survival of the wolf and its prey are more important today than ever, and Murie helps us understand the careful balance that must be maintained to ensure that these magnificent animals prosper. Originally available only in government publications which are long out-of-print, this account of a much maligned animal is now available in its first popular edition.

The Monkey Wrench Gang Edward Abbey 2011-08-19 A motley crew of saboteurs wreaks havoc on the corporations destroying America's Western wilderness in this "wildly funny, infinitely wise" classic (The Houston Chronicle). When George Washington Hayduke III returns home from war in the jungles of Southeast Asia, he finds the unspoiled West he once knew has been transformed. The pristine lands and waterways are being strip mined, dammed up, and paved over by greedy government hacks and their corrupt corporate coconspirators. And the manic, beer-guzzling, rabidly antisocial ex-Green Beret isn't just getting mad. Hayduke plans to get even. Together with a radical feminist from the Bronx; a wealthy, billboard-torching libertarian MD; and a disgraced Mormon polygamist, Hayduke's ready to stick it to the Man in the most creative ways imaginable. By the time they're done, there won't be a bridge left standing, a dam unblown, or a bulldozer unmolested from Arizona to Utah. Edward Abbey's most popular novel, *The Monkey Wrench Gang* is an outrageous romp with ultra-serious undertones that is as relevant today as it was in the early days of the environmental movement. The author who Larry McMurtry (Lonesome Dove) once dubbed "The Thoreau of the American West" has written a true comedic classic with brains, heart, and soul that more than justifies the call from the Los Angeles Times Book Review that we should all "praise the earth for Edward Abbey!" "Mixes comedy and chaos with enough chase sequences to leave you hungering for more."—The San Francisco Chronicle

Psychology of Coaching Coleman Roberts Griffith 1926

Tantric Pulsation Aneasha L Dillon 2005 This book celebrates Aneasha's thirty years of experience working with neo-Reichian methods of energy release, combined with meditation. It contains both theoretical and descriptive information about her work with people, which she calls Pulsation, and also traces the development of a new branch of her work, Tantric Pulsation. Aneasha's book, "Tantric Pulsation," is rooted in the insights of two of the most controversial figures of the twentieth century, Wilhelm Reich and Osho Rajneesh. Reich was a disciple of Sigmund Freud, the founder of modern psychology. Reich agreed with Freud that sexual repression lies at the root of psychological neurosis, and went on to state that even ordinary, normal human beings are incapable of enjoying their lives because of widespread sexual and emotional repression practiced by all civilized societies. Reich found that the physical body stores these repressed energies as tension in the muscles, which he called "muscular armoring." He developed a system which uses breathing and body movement to release this tension, including strong emotional expression. This, in turn, allows energy to flow freely and naturally throughout the whole body, inducing a physical state of tremendous aliveness, together with feelings of relaxation and well-being. Osho Rajneesh, an Indian mystic considered by many a modern Tantra master, also

works with life energy through his extraordinary and transforming Active meditations. His Tantra vision, wholly life affirmative, is rooted in acceptance, let-go, meditation, and celebration of life. This is a vision which embraces all human experience, from sex to superconsciousness. Aneesha's methods have grown from these two streams of understanding, one western, one eastern. The result is a unique process of self experience and transformation, both delightful and profound.

The Fundamental Concepts of Metaphysics Martin Heidegger 1996-01-22 Now in paperback! " . . . an important addition to the translations of Heidegger's lecture-courses . . . Heidegger's voice can be heard with few of the jolting Germanisms with which so many translations of Heidegger's texts have been burdened. . . ." –International Philosophical Quarterly "The translators of these lectures have succeeded splendidly in giving readers an intimation of the tensely insistent tone of the original German. Heidegger's concern with a linguistic preconsciousness and with our entrancement before the enigma of existence remains intensely contemporary." –Choice "There is much that is new and valuable in this book, and McNeill and Walker's faithful translation makes it very accessible." –Review of Metaphysics "Whoever thought that Heidegger . . . has no surprises left in him had better read this volume. If its rhetoric is 'hard and heavy' its thought is even harder and essentially more daring than Heideggerians ever imagined Heidegger could be." –David Farrell Krell First published in German in 1938 as volume 29/30 of Heidegger's collected works, *The Fundamental Concepts of Metaphysics* includes an extended treatment of the history of metaphysics and an elaboration of a philosophy of life and nature. Heidegger's concepts of organism, animal behavior, and environment are uniquely developed and defined with intensity. This work, the text of Martin Heidegger's lecture course of 1929/30, is crucial for an understanding of Heidegger's transition from the major work of his early years, *Being and Time*, to his later preoccupations with language, truth, and history. First published in German in 1983 as volume 29/30 of Heidegger's collected works, *The Fundamental Concepts of Metaphysics* includes an extended treatment of the history of metaphysics and an elaboration of a philosophy of life and nature. Heidegger's concepts of organism, animal behavior, and environment are uniquely developed and defined with intensity.

Ego States Charlotte Sills 2002-11-01 This book offers a comprehensive overview of approaches to ego state work within transactional analysis. It is intended to provide a coherent overview of the state of the art in the theory of ego states in transactional analysis.

Gaia, Psyche and Deep Ecology Andrew Fellows 2019-03-04 Winner of the Scientific & Medical Network Book Prize 2019! In *Gaia, Psyche and Deep Ecology: Navigating Climate Change in the Anthropocene*, Andrew Fellows uniquely connects Earth systems, Jungian and philosophical approaches to the existential threats that we face today. He elucidates the psychological basis of our dysfunctional relationship with nature, thereby offering a coherent framework for transforming this in our personal and professional lives. Demonstrating the imperative for new ideas that transcend the status quo, Fellows tackles unprecedented 21st century challenges such as climate change through his interdisciplinary approach. Fellows proposes a worldview, informed by depth psychology, which radically contradicts the prevailing shibboleths of unlimited economic growth, dominion over outer nature and negation of our inner nature. To accommodate a broad readership, he first introduces the Anthropocene and sufficient basics of systems dynamics, Gaia theory and analytical psychology before exploring the mind-matter conundrum. He then correlates the structure, dynamics, contents and pathology of Gaia and of psyche, critiques the Western Zeitgeist as midlife crisis and establishes parallels between deep ecology and psychological individuation. This ground-breaking synthesis of Gaia theory, analytical psychology and deep ecology reveals synergies which show how we can, and why we must, relinquish anthropocentrism in order to survive sustainably as equals in and with the natural world. Combining Jungian theory with other cutting-edge disciplines to inform, inspire and heal, this book is essential reading not only for Jungian analysts, students and scholars, but for all—including professionals in Earth systems science, environmental philosophy and ecopsychology—who realise that 'business as usual' is no longer an option.

Rhetoric as Philosophy Ernesto Grassi 2000-12-31 By going back to the Italian humanist tradition and aspects of earlier Greek and Latin thought, Ernesto Grassi develops a conception of rhetoric as the basis of philosophy. Grassi explores the sense in which the first principles of rational thought come from the metaphorical power of the word. He finds the basis for his conception in the last great thinker of the Italian humanist tradition, Giambattista Vico (1668-1744). He concentrates on Vico's understanding of imagination and the sense of human ingenuity contained in metaphor. For Grassi, rhetorical activity is the essence and inner life of thought when connected to the metaphorical power of the word. Originally published in English in 1980, *Rhetoric as Philosophy* has been out of print for some time. In his foreword to this reprint edition, Burke scholar Timothy W. Crusius rues the lack of concentrated attention to Grassi because "what he had to say about rhetoric is at least as significant as, for example, what Kenneth Burke taught us".

Ecolinguistics Arran Stibbe 2015-05-01 The increasingly rapid destruction of the ecological systems that support life is calling into question some of the fundamental stories that we live by: stories of unlimited economic growth, of consumerism, progress, individualism, success, and the human domination of nature. Ecolinguistics shows how linguistic analysis can help reveal the stories we live by, open them up to question, and contribute to the search for new

stories. Bringing together the latest ecolinguistic studies with new theoretical insights and practical analyses, this book charts a new course for ecolinguistics as an engaged form of critical enquiry. Featuring: A framework for understanding the theory of ecolinguistics and applying it practically in real life; Exploration of diverse topics from consumerism in lifestyle magazines to Japanese nature haiku; A comprehensive glossary giving concise descriptions of the linguistic terms used in the book; Discourse analysis of a wide range of texts including newspapers, magazines, advertisements, films, nonfiction books, and visual images. This is essential reading for undergraduates, postgraduates and researchers working in the areas of Discourse Analysis and Language and Ecology.

Ecopsychology Peter H. Kahn, Jr. 2012-07-20 An ecopsychology that integrates our totemic selves—our kinship with a more than human world—with our technological selves. We need nature for our physical and psychological well-being. Our actions reflect this when we turn to beloved pets for companionship, vacation in spots of natural splendor, or spend hours working in the garden. Yet we are also a technological species and have been since we fashioned tools out of stone. Thus one of this century's central challenges is to embrace our kinship with a more-than-human world—our totemic self—and integrate that kinship with our scientific culture and technological selves. This book takes on that challenge and proposes a reenvisioned ecopsychology. Contributors consider such topics as the innate tendency for people to bond with local place; a meaningful nature language; the epidemiological evidence for the health benefits of nature interaction; the theory and practice of ecotherapy; Gaia theory; ecovillages; the neuroscience of perceiving natural beauty; and sacred geography. Taken together, the essays offer a vision for human flourishing and for a more grounded and realistic environmental psychology.

Ecotherapy Linda Buzzell 2009-05-12 In the 14 years since Sierra Club Books published Theodore Roszak, Mary E. Gomes, and Allen D. Kanner's groundbreaking anthology, *Ecopsychology: Restoring the Earth, Healing the Mind*, the editors of this new volume have often been asked: Where can I find out more about the psyche-world connection? How can I do hands-on work in this area? Ecotherapy was compiled to answer these and other urgent questions. Ecotherapy, or applied ecopsychology, encompasses a broad range of nature-based methods of psychological healing, grounded in the crucial fact that people are inseparable from the rest of nature and nurtured by healthy interaction with the Earth. Leaders in the field, including Robert Greenway, and Mary Watkins, contribute essays that take into account the latest scientific understandings and the deepest indigenous wisdom. Other key thinkers, from Bill McKibben to Richard Louv to Joanna Macy, explore the links among ecotherapy, spiritual development, and restoring community. As mental-health professionals find themselves challenged to provide hard evidence that their practices actually work, and as costs for traditional modes of psychotherapy rise rapidly out of sight, this book offers practitioners and interested lay readers alike a spectrum of safe, effective alternative approaches backed by a growing body of research.

Reinventing Nature? Michael E. Soule 1995 *Reinventing Nature?* is an interdisciplinary investigation of how perceptions and conceptions of nature affect both the individual experience and society's management of nature. Leading thinkers from a variety of fields - philosophy sociology, zoology, history, ethnobiology and others - address the conflict between the perception and reality of nature, each from a different perspective.

Brute Force Arnold Arluke 2007 *Brute Force* looks at people having the most contact with everyday animal abuse: humane law enforcement officers who are charged with enforcing anti-cruelty statutes. The author spent one year studying 30 "animal cops" and dispatchers in two large cities. They see themselves as a power for the helpless, a voice for the mute. On-the-job experience changes this view. Rather than "fighting the good fight" against egregious cases of cruelty, they are overwhelmed with complaints that are ambiguous and must be "stretched" to qualify as legally defined abuse or with complaints of "barking dogs" or "thin" pets that are used in interpersonal disputes to get neighbors or spouses into trouble. Even more discouraging to officers are clear-cut and extreme cases of cruelty that do not lead to guilty verdicts or stiff penalties in court. Resulting cynicism is aggravated when rookies realize that they are seen as second-rate "wannabe" cops or closet animal "extremists." With little legitimate authority to enforce the law, animal cops become humane educators who try to make people into responsible pet owners.

Beyond Oil Kenneth S. Deffeyes 2006-06-13 "This book explains both why the decline of our most precious fuel is inevitable and how challenging it will be to cope with what comes next."—Richard E. Smalley, University Professor, Rice University, and 1996 Nobel laureate With world oil production about to peak and inexorably head toward steep decline, what fuels are available to meet rising global energy demands? That question, once thought to address a fairly remote contingency, has become ever more urgent, as a spate of books has drawn increased public attention to the imminent exhaustion of the economically vital world oil reserves. Kenneth S. Deffeyes, a geologist who was among the first to warn of the coming oil crisis, now takes the next logical step and turns his attention to the earth's supply of potential replacement fuels. In *Beyond Oil*, he traces out their likely production futures, with special reference to that of oil, utilizing the same analytic tools developed by his former colleague, the pioneering petroleum-supply authority M. King Hubbert. "The bad news in this book is made bearable by the author's witty, conversational writing style. If my college econ textbooks had been written this way, I might have learned economics." —Rupert Cutler, *The Roanoke Times*
