his mother and older sister, eleven-year-old Harrison Opoku lives on the ninth floor of a block of flats on a London housing estate. The second best runner in the whole of Year 7, Harri races through his new life in his personalised trainers - the Adidas stripes drawn on with marker pen - blissfully unaware of the very real threat all around him. With equal fascination for the local gang - the Dell Farm Crew - and the pigeon who visits his balcony, Harri absorbs the many strange elements of his new life in England: watching, listening, and learning the tricks of inner-city survival. But when a boy is knifed to death on the high street and a police appeal for witnesses draws only silence, Harri decides to start a murder investigation of his own. In doing so, he unwittingly endangers the fragile web his mother has spun around her family to try and keep them safe. A story of innocence and experience, hope and harsh reality, Pigeon English is a spellbinding portrayal of a boy balancing on the edge of manhood and of the forces around him that try to shape the way he falls.

*Specimen Science* Holly Fernandez Lynch 2017-10-06 Advances in medicine often depend on the effective collection, storage, research use, and sharing of human biological specimens and associated data. But what about the sources of such specimens? When a blood specimen is drawn from a vein in your arm, is that specimen still you? Is it your property, intellectual or otherwise? Should you be allowed not only to consent to its use in research but also to specify under what circumstances it may be used? These and other questions are at the center of a vigorous debate over the use of human biospecimens in research. In this book, experts offer legal, regulatory, and ethical perspectives on balancing social benefit and human autonomy in biospecimen research. After discussing the background to current debates as well as several influential cases, including that of Henrietta Lacks, the contributors consider the rights, obligations, risks, and privacy of the specimen source; different types of informed consent under consideration (broad, blanket, and specific); implications for special patient and researcher communities; and the governance of biospecimen repositories and the responsibilities of investigators.
