The Evolution of Carbon Markets

2019-12-09 Jørgen Wettestad Carbon markets are developing and expanding around the world, but how and to what extent is their design shaped by learning and interaction between them? How do these markets function and what is the role of design? Carrying out a ground-breaking analysis of their design and diffusion, this book covers all the major carbon market systems and processes around the world: the EU, RGGI, California, Tokyo, New Zealand, Australia, China, South Korea and Kazakhstan. It offers a systematic, in-depth discussion and comparison of the key design features in these systems with expert contributors exploring how, and to what extent, these features have been shaped by central policy diffusion mechanisms and domestic politics. By focussing on the specific design features of the instruments used, this volume makes important contributions to diffusion theory, highlighting how ETS diffusion processes more often have resulted in design divergence than convergence, and discussing the implications of this finding for the vision of linked systems in the post-Paris era. It will be of significant interest to a broad audience interested in the emergence, evolution, functioning and interaction of carbon markets.

Results

2022-05-24 Charlie Baker A Leader's Guide to Executing Change and Delivering Results. Governor Charlie Baker, one of the most popular governors in the United States, with a reputation for getting things done, wants to put the service back into public service: "Wedge issues may be great for making headlines," he writes, "but they do not move us forward. Success is measured by what we accomplish together. Our obligation to the people we serve is too important to place politics and partisanship before progress and results." For the Governor and his longtime associate Steve Kadish, these words are much more than political platitudes. They are at the heart of a method for delivering results—and getting past politics—the two developed while working together in top leadership positions in the public and private sectors. Distilled into a four-step framework, Results is the much-needed implementation guide for anyone in public service, as well as for leaders and managers in large organizations hamstrung by bureaucracy and politics. With a broad range of examples, Baker, a Republican, and Kadish, a Democrat, show how to move from identifying problems to achieving results in a way that bridges divides instead of exacerbating them. They show how government can be an engine of positive change and an example of effective operation, not just a hopeless bureaucracy. Results is not only about getting things done, but about renewing people's faith in public service. Empty promises feed disengagement when instead we need confidence in our government and the services it delivers. When a mob attacked the US Capitol Building on January 6, 2021, the very core of our democracy and our sense of government were threatened. Demonstrating that government can work—the goal of this book—is vital to ensuring the future of our democracy.

Going Private

2018 Daniel A. Farber This is a review of a new book by Michael Vandenbergh and Jonathan Gilligan, Beyond Politics: The Private Governance Response to Climate Change. They make a persuasive case that private initiatives in this area have been underestimated. The review seeks to build on their analysis in two ways. First, it examines what features of private action make it more or less a form of "governance," and it suggests some ways the private sector could move further toward regulatory governance. Second, it considers ways to expand synergies between private action and governmental efforts. If, as seems likely, climate action is likely to be as much

bottom-up as top-down, it is important to explore how the private sector can contribute to this effort.

Rethinking Private Authority

2013-12-22 Jessica F. Green Rethinking Private Authority examines the role of non-state actors in global environmental politics, arguing that a fuller understanding of their role requires a new way of conceptualizing private authority. Jessica Green identifies two distinct forms of private authority—one in which states delegate authority to private actors, and another in which entrepreneurial actors generate their own rules, persuading others to adopt them. Drawing on a wealth of empirical evidence spanning a century of environmental rule making, Green shows how the delegation of authority to private actors has played a small but consistent role in multilateral environmental agreements over the past fifty years, largely in the area of treaty implementation. This contrasts with entrepreneurial authority, where most private environmental rules have been created in the past two decades. Green traces how this dynamic and fast-growing form of private authority is becoming increasingly common in areas ranging from organic food to green building practices to sustainable tourism. She persuasively argues that the configuration of state preferences and the existing institutional landscape are paramount to explaining why private authority emerges and assumes the form that it does. In-depth cases on climate change provide evidence for her arguments. Groundbreaking in scope, Rethinking Private Authority demonstrates that authority in world politics is diffused across multiple levels and diverse actors, and it offers a more complete picture of how private actors are helping to shape our response to today's most pressing environmental problems.

Political Power and Corporate Control

2010-06-20 Peter A. Gourevitch Why does corporate governance—front page news with the collapse of Enron, WorldCom, and Parmalat—vary so dramatically around the world? This book explains how politics shapes corporate governance—how managers, shareholders, and workers jockey for advantage in setting the rules by which companies are run, and for whom they are run. It combines a clear theoretical model on this political interaction, with statistical evidence from thirty-nine countries of Europe, Asia, Africa, and North and South America and detailed narratives of country cases. This book differs sharply from most treatments by explaining differences in minority shareholder protections and ownership concentration among countries in terms of the interaction of economic preferences and political institutions. It explores in particular the crucial role of pension plans and financial intermediaries in shaping political preferences for different rules of corporate governance. The countries examined sort into two distinct groups: diffuse shareholding by external investors who pick a board that monitors the managers, and concentrated blockholding by insiders who monitor managers directly. Examining the political coalitions that form among or across management, owners, and workers, the authors find that certain coalitions encourage policies that promote diffuse shareholding, while other coalitions yield blockholding-oriented policies. Political institutions influence the probability of one coalition defeating another.

Beyond Politics

2017-12-21 Michael P. Vandenbergh Private sector action provides one of the most promising opportunities

to reduce the risks of climate change, buying time while governments move slowly or even oppose climate mitigation. Starting with the insight that much of the resistance to climate mitigation is grounded in concern about the role of government, this book draws on law, policy, social science, and climate science to demonstrate how private initiatives are already bypassing government inaction in the US and around the globe. It makes a persuasive case that private governance can reduce global carbon emissions by a billion tons per year over the next decade. Combining an examination of the growth of private climate initiatives over the last decade, a theory of why private actors are motivated to reduce emissions, and a review of viable next steps, this book speaks to scholars, business and advocacy group managers, philanthropists, policymakers, and anyone interested in climate change.

Private Government

2019-04-30 Elizabeth Anderson Why our workplaces are authoritarian private governments—and why we can't see it One in four American workers says their workplace is a "dictatorship." Yet that number almost certainly would be higher if we recognized employers for what they are—private governments with sweeping authoritarian power over our lives. Many employers minutely regulate workers' speech, clothing, and manners on the job, and employers often extend their authority to the off-duty lives of workers, who can be fired for their political speech, recreational activities, diet, and almost anything else employers care to govern. In this compelling book, Elizabeth Anderson examines why, despite all this, we continue to talk as if free markets make workers free, and she proposes a better way to think about the workplace, opening up space for discovering how workers can enjoy real freedom.

Dialogue

2019 Cassie Phillips When the United States withdrew from the Paris Climate Agreement, 100 private corporations reaffirmed their commitment to fighting climate change. While governments are often tasked with facing climate change, many major private institutions are taking steps to significantly reduce carbon emissions, reaping the benefits of favorable public image and reduced operational costs from energy and other savings. On September 5, 2018, ELI held an expert panel discussing the role of private institutions in climate change mitigation, the incentives for private actors pursuing carbon reduction initiatives, key factors in successful case studies, and methods for developing and evaluating successful private climate initiatives. Below, we present a transcript of the discussion, which has been edited for style, clarity, and space considerations.

Selling Sustainability Short?

2020-05-14 Janina Grabs Can private standards bring about more sustainable production practices? This question is of interest to conscientious consumers, academics studying the effectiveness of private regulation, and corporate social responsibility practitioners alike. Grabs provides an answer by combining an impact evaluation of 1,900 farmers with rich qualitative evidence from the coffee sectors of Honduras, Colombia and Costa Rica. Identifying an institutional design dilemma that private sustainability standards encounter as they scale up, this book shows how this dilemma plays out in the coffee industry. It highlights how the erosion of price premiums and the adaptation to buyers' preferences have curtailed standards' effectiveness in promoting sustainable practices that create economic opportunity costs for farmers, such as agroforestry or agroecology. It also provides a voice for coffee producers and value chain members to explain why the current system is failing in its mission to provide environmental, social, and economic co-benefits, and what changes are necessary to do better.
