Unpacking the Decent Work Agenda in Construction Operations for Developing Countries 2023-06-07 Tirivavi Moyo Low construction labour productivity and the inadequate welfare of construction workers are consistent challenges in developing countries. These challenges are partially due to shortcomings situated in the Decent Work Agenda. This book proposes ways of sustaining construction labour productivity through fulfilling the Decent Work Agenda. This is a unique area of focus that is essential to fulfilling the broader and global aspects of decent work, sustainability and construction labour productivity. Also, the focus of this book is on contributing to the plight of construction workers whose treatment is significantly unsound. The construction industry needs to develop a humanistic face and contribute to the UN's sustainable development goal of achieving full and productive employment and decent work for all women and men. To achieve this, construction companies are encouraged to implement corporate social responsibility strategies by equipping workers of different educational levels with knowledge and skills that can be transferred to benefit themselves and their communities. Thus, establishing structured on-the-job training that incorporates sustainability-learning objectives to achieve workers' safety on sites is essential. The book advocates for decency in the workplace through people-centred management, sustainability learning of skilled and semi-skilled construction workers and decent working conditions. It will be of interest to construction industry policymakers, construction professionals, academics and students of sustainable development and developing economies.

Environmental Management in Construction 2007-01-24 Heng Li Demands on the construction industry are changing, and it is now virtually essential for environmental management to be considered at all stages of a project. Many construction managers are finding a quantitative approach useful, and this book outlines four quantitative

methods which can be applied at different construction stages, and which fit within a comprehensive framework of dynamic Environmental Impact Assessment (EIA). These include: a method to quantitatively evaluate and reduce pollution and hazards levels a method to evaluate the environmental-consciousness of proposed construction plans a method to reduce on-site construction wastes through an incentive reward programme a method to promote C and D waste exchange in the local construction industry. With an experimental case study of the application of these methods, this book delivers a comprehensive review of environmental management issues in construction. With regulatory requirements potentially favouring the quantitative approach, this timely guide ensures that contractors will be able to keep pace with environmental management standards.

Building with Earth 2021-12-06 Gernot Minke Earth, in common use for architectural construction for thousands of years, has in the past thirty years attracted renewed attention as a healthy, environment-friendly and economical building material. What needs to be considered in this context? The manual Building with Earth, which has been translated into many languages, describes the building technology of this material. The physical properties and characteristic values are explained in a hands-on manner: With proper moisture protection, earth buildings are very durable, and in particular the combination with wood or straw allows a wide spectrum of design options. Numerous built examples demonstrate the range of applications for this fully recyclable material.

Intelligent Buildings: An Introduction 2013-10-08 Derek Clements-Croome This book introduces the concept of Intelligent Buildings to the wider construction community. Edited by the Father of Intelligent Buildings, Derek Clements-Croome, the book explains that intelligent buildings should be sustainable, healthy, technologically aware, meet the needs of occupants and business, and should be flexible and adaptable to deal with change. This means the processes of planning, design, construction, commissioning and facilities management including post-occupancy evaluation are all important. Buildings comprise many systems devised by many people and yet the relationship between buildings and people can only work satisfactorily if there is an integrated team with a holistic vision.

Collaborative Relationships in Construction 2009-01-28 Hedley Smyth The book collects the latest research on both contractual and conceptual collaborative practices in construction. It identifies common problems faced by the industry and draws out practical implications. Construction projects are increasingly run in ways that undermine the traditional boundary of the firm and sometimes also the definition of the project coalition. This poses challenges for construction firms whose clients demand ever increasing performance improvements as well as those firms who want to improve their strategies for greater collaboration to give themselves competitive advantage. The editors identify three main themes: collaborative relationships, operating both in frameworks and within networks of contacts, e.g. relational contracting in partnering, supply chain management and other procurement-driven initiatives. The second theme is frameworks, both contractual frameworks binding parties together over a series of contracts, and conceptual frameworks used to develop future performance improvement arising from the proactive strategies of firms. The third theme is the network of relationships that supports individuals and firms within the project coalition in delivering services and adding value to improve performance. These networks define the investment and incentives supporting the inter-firm and intra-firm relationships, as well as the formal contractual conditions through which such incentives flow. Networks of information exchange define the structure of the activity and help predict organisational configurations for successful project outcomes.

Reuse of Materials and Byproducts in Construction 2013-09-24 Alan Richardson The construction industry is the largest single waste producing industry in the UK. Ensuring a supply chain of recycled materials affords many potential gains, achieved through: reducing the material volume transported to already over-burdened landfill sites, possible cost reductions to the contractor/client when considering the landfill tax saved and the potential for lower cost material replacements, a reduction in the environmental impact of quarrying and the saving of depleting natural material resources. Reuse of Materials and Byproducts in Construction: Waste Minimization and Recycling addresses use of waste and by products in the construction industry. An over view of new "green" design guides to encourage best practice will be examined and current legislation that channels on site practices, such as site waste management plans. Fundamental individual construction materials are discussed and the process of reforming by products and waste products into new construction materials is investigated, examining the material performance, energy required to convert waste into new products and viability of recycling. The main range of constructional materials will be examined. Aimed at postgraduate students, lecturers and researchers in construction and civil engineering, the book will also be of interest to professional design practices.

An Integrated Infrastructure Delivery Model for Developing Economies 2023-08-29 Rembulwani Bethuel Netshiswinzhe This book explores the attributes of an integrated model for infrastructure delivery as a means to achieve high impact investing, sustainable growth and development in a developing economy. An Integrated Infrastructure Delivery Model for Developing Economies: Planning and Delivery Management Attributes is premised on the understanding that one of the most significant barriers to efficient and effective infrastructure delivery is the nature and extent of fragmentation in the ways in which infrastructure projects are planned, designed, and delivered. Using a Delphi method, the research presented in this book examines the infrastructure delivery models and practices that have been employed in South Africa and other developing countries, and in doing so presents eight attributes for integrated infrastructure delivery. These are: (i) developing a common vision for the community, (ii) stakeholder participation, (iii) integrated project development and scoping, (iv) access to planning information, (v) cross-sectoral planning, (vi) integrated infrastructure master plans, (vii) statutory and regulatory compliance and (viii) integrated contractual frameworks. The book presents a practical model that can serve as a guide and a manual for project planning and development to achieve integrated infrastructure delivery in developing economies. The proposed model should serve as a framework to inform future planning and programming of infrastructure projects within the public sector space. Furthermore, the application of the model will help resolve the problems of fragmentation and lack of coordination in how infrastructure projects are planned and implemented. This book will be beneficial to infrastructure practitioners, policymakers, researchers and academics who pursue best practice models to improve the delivery and management of infrastructure.

Nursing Theorists and Their Work - E-Book 2017-07-20 Martha Raile Alligood A classic text is back with fresh, comprehensive nursing theories, critiques, and philosophies. Nursing Theorists and Their Work, 9th Edition provides you with an in-depth look at 39 theorists of historical, international, and significant importance. This new edition has been updated with an improved writing style, added case studies, critical thinking activities, and in-depth objective critiques of nursing theories that help bridge the gap between theory and application. In addition, the six levels of abstraction (philosophy, conceptual models, grand theory, theory, middle-range theory, and future of nursing theory) are graphically depicted throughout the book to help you understand the context of the various theories. Each theorist chapter is written by a scholar specializing in that particular theorist's work, often having worked closely with the theorists, to provide the most accurate and complete information possible. The Architect in Practice 2016-01-26 David Chappell Throughout its many editions, The Architect in Practice has remained a leading textbook used in the education of architects. While the content of the book has developed, the message and philosophy has remained constant: to provide students of architecture and young practitioners with a readable guide to the profession, outlining an architect's duties to their client and contractor, the key aspects of running a building contract, and the essentials of management, finance and drawing office procedure. The eleventh edition follows in that tradition. The text has been brought up to date to ensure it follows the new RIBA Plan of Work 2013 as the guide to the architect's workflow. In addition, a number of changes to standard forms of contract were made with the publication of the JCT 2011 suite of contracts, and the RIBA Standard Form for the Appointment of an Architect 2010 (2012 Revision). These new forms are fully covered. In addition, the opportunity has been taken to reorganise the layout so that the content flows in a way that is more consistent with current architectural practice, and to deal with the increasing use of BIM. The eleventh edition of The Architect in Practice continues to provide the guidance and advice all students and practising architects need in the course of their studies and in their profession.
