Atlas of Fallen Dust in Kuwait

2021 Ali Al-Dousari This open access book serves as an atlas of deposited dust and dust storms in Kuwait in relation to local and global regions. It features a wealth of maps and images of dust storm trajectories in the region, together with detailed descriptions of the chemical and physical properties of fallen dust, including the amount, particle size, statistical parameters, spectra absorption, dust mineralogy, trace and major elements, organic matter, associated pollen, and radionuclides and connected pollutants. Given its scope, the book is a valuable resource for a broad range of researchers, including geologists, chemists, environmentalists, botanists, air quality specialists, nanotechnology scientists, and solar energy experts.

Advanced Synthesis of Gold and Zirconia Nanoparticles and Their Characterization

2011 Stephan Dankesreiter The development of small and smallest particle is one of today's key features in modern science. The goal is to form materials with improved properties than their "classical" ancestors with just a fractional amount of raw material. However, the characterization of these particles is as important as their way of preparation. Different techniques with their origins in physics, inorganic, organic and physical chemistry have to be combined to reveal the secrets of this important field of science. This book gives a short overview of theoretical basics and synthesis methods to form and characterize gold and zirconia nanoparticles. Phenomenon like plasmon resonance self-assembly of surfactants and the different structures of ZnO₂ are explained. Furthermore, analytical tools, like small angle X-ray scattering, X-ray powder diffraction and scanning electron microscopy are introduced. In addition, details on the synthesis of gold and zirconia nanoparticles are presented and are examined by the mentioned analytical and calorimetric methods.

Disinfection Efficiency and Dose Measurement of Polychromatic UV Light

2004-01-01 Karl G. Linden There is currently intense interest in the use of ultraviolet technology for helping to meet future regulations relating to improved microbial inactivation and decreased disinfection byproducts (DBPs). Much of this interest has been fueled by recent research indicating the effectiveness of UV technologies for the inactivation of *Cryptosporidium*. This scientific discovery, combined with proposed regulations concerning DBPs in the United States, has resulted in a need to evaluate the feasibility and effectiveness of UV irradiation for use as a disinfectant for drinking water. The objectives of this project were to: (1) develop and evaluate physical, chemical, and biological methods for calculating effective germicidal UV dose from medium-pressure (MP) and Pulsed-UV (P-UV) lamps; (2) establish a UV dose/log inactivation relationship for specific bacterial and viral indicators for MP and P-UV lamps; (3) determine the extent of photoreactivation and dark repair of heterotrophic bacteria after treatment by MP and P-UV lamps; and (4) compare the ability of MP and P-UV lamps to inactivate *Cryptosporidium*. NanoArmoring of Enzymes: Rational Design of Polymer-Wrapped Enzymes

2017-04-14 Nanoarmoring of Enzymes: Rational Design of Polymer-Wrapped Enzymes is the latest volume in the Methods in Enzymology series and focuses on nanoarmoring of enzymes and the rational design of polymer-wrapped enzymes. Focuses on the nanoarmoring of enzymes Covers the rational design of polymer-wrapped enzymes Includes contributions from leading authorities working in enzymology Informs and updates on all the latest developments in the field of enzymology

G-quadruplex and Microorganisms

2019-08-19 Sara N. Richter G-quadruplexes (G4s) are nucleic acids secondary structures that form in DNA or RNA guanine (G)-rich strands. In recent years, the presence of G4s in microorganisms has attracted increasing interest. In prokaryotes, G4 sequences have been reported in several human pathogens. Bacterial enzymes able to process G4s have been identified. In viruses, G4s have been suggested to be involved in key steps of the viral life cycle: They have been associated with the human immunodeficiency virus (HIV), herpes simplex virus 1 (HSV-1), human papilloma virus, swine pseudorabies virus, and other viruses' genomes. New evidence shows the presence of G4s in parasitic protozoa, such as the causative agent of malaria. G4 binding proteins and mRNA G4s have been implicated in the regulation of microorganisms' genome replication and translation. G4 ligands have been developed and tested both as tools to study the complexity of G4-mediated mechanisms in the viral life cycle and as therapeutic agents. Moreover, new techniques to study G4 folding and their interactions with proteins have been developed. This Special Issue will focus on G4s present in microorganisms, addressing all the above aspects.

Advanced Oxidation Technologies

2014-03-03 Marta I. Litter Advanced Oxidation Technologies (AOTs) or Processes (AOPs) are relatively new and innovative technologies to remove harmful and toxic pollutants. The most important processes among them are those using light, such as UVC/H₂O₂, photo-Fenton and heterogeneous photocatalysis with TiO₂. These technologies are also relatively low-cost and therefore useful for countries under development, where the economical resources are scarcer than in developed countries. This book provides a state-of-the-art overview on environmental applications of Advanced Oxidation Technologies (AOTs) as sustainable, low-cost and low-energy consuming treatments for water, air, and soil. It includes information on innovative research and development on TiO₂ photocatalytic redox processes, Fenton, Photo-Fenton processes, zerovalent iron technology, and others, highlighting possible applications of AOTs in both developing and industrialized countries around the world in the framework of "A crosscutting and comprehensive look at environmental problems". The book is aimed at professionals and academics worldwide, working in the areas of water resources, water supply, environmental protection, and will be a useful information source for decision and policy makers and other stakeholders working on solutions for environmental problems.

Hierarchical Macromolecular Structures: 60 Years after the Staudinger Nobel Prize II

2014-07-08 Virgil Percec Advances in Polymer Science enjoys a longstanding tradition and good reputation in its community. Each volume is dedicated to a current topic and each review critically surveys one aspect of that topic, to place it within the context of the volume. The volumes typically summarize the significant developments of the last 5 to 10 years and discuss them critically, presenting selected examples, explaining and illustrating the important principles and bringing together many important references of primary literature. On that basis, future research directions in the area can be discussed. Advances in Polymer Science volumes thus are important references for every polymer scientist as well as for other scientists interested in polymer science - as an introduction to a neighboring field, or as a compilation of detailed information for the specialist.

Handbook on Characterization of Biomass, Biowaste and Related By-products

2020-02-17 Ange Nzihou This book provides authoritative information, techniques and data necessary for the appropriate understanding of biomass and biowaste (understood as contaminated biomass) composition and behaviour while processed in various conditions and technologies. Numerous techniques for characterizing biomass, biowaste and by-product streams exist in literature. However, there lacks a reference book where these techniques are gathered in a single book, although such information is in increasingly high demand. This handbook provides a wealth of characterization methods, protocols, standards, databases and references relevant to various biomass, biowaste materials and by-products. It specifically addresses sampling and preconditioning methods, extraction techniques of elements and molecules, as well as biochemical, mechanical and thermal characterization methods. Furthermore, advanced and innovative methods under development are highlighted. The characterization will allow the analysis, identification and quantification of molecules and species including biomass feedstocks and related conversion products. The characterization will also provide insight into physical, mechanical and thermal properties of biomass and biowaste as well as the resulting by-products.

****The Life and Legacy of Nelson Mandela****

Nelson Mandela stands as one of the most influential leaders of the 20th century. His life journey began on July 18, 1918, in the tranquil village of Mvezo, South Africa. Born into the Thembu royal family, he was bestowed with the name Rolihlahla, meaning "troublemaker" in Xhosa. Mandelas upbringing unfolded amidst a backdrop of racial oppression, where he witnessed firsthand the unfair practices inflicted upon the Black majority by the ruling white minority government. Driven by a deep sense of fairness, he dedicated his life to the struggle for emancipation and fairness, joining the African National Congress (ANC), a political organization dedicated to dismantling apartheid, the system of racial discrimination that plagued South Africa. Emerging as an inspiring lawyer, activist, and leader, Mandela faced numerous arrests and imprisonments for his unwavering resistance and defiance. For 27 years, he endured the harsh conditions and isolation of Robben Island, a notorious prison island, where his vision never wavered. His unwavering commitment to freedom continued to inspire and mobilize his people and the world at large. In 1990, he walked out of prison, free at last, and in 1994, he made history as South Africas first democratically elected Black president. Mandelas leadership ushered in a period of reconciliation, transforming South Africa into a nation of justice. His global impact extended far beyond South Africas borders, as he became a beacon of peace, recognized for his unwavering dedication to these ideals. In 1993, he was awarded the Nobel Peace Prize, alongside numerous other accolades and honors. On December 5, 2013, at the age of 95, Mandela passed away, leaving behind a legacy of strength, insight, and empathy. Revered as the father of the nation and one of historys greatest heroes, Mandelas legacy continues to inspire generations to come.

She had spent her childhood in a normal family, living in a quaint town, devoid of any signs of the supernatural. However, on her sixteenth birthday, her life took an unexpected turn. A enigmatic package arrived, sent by her grandmother, who had passed away years ago. Within the package lay an timeworn leather-bound book, its cover adorned with the inscription, "The Book of Shadows". As Eva opened the book, a surge of power coursed through her veins. She realized that the book held the secrets of her family's magical lineage, and that she was the last descendant of a long line of powerful witches. But she also discovered that she was not alone. There were others like her, individuals who possessed similar abilities, and some of them sought to wield their magic for evil purposes. Eva faced a pivotal decision: embrace her destiny as a witch and delve into the world of sorcery, or reject her newfound powers and continue living her life as she had always known it. Regardless of her choice, she knew that her life would forever be changed beyond recognition from that moment forward.
