Written during the English Civil War (1642–1651), *Leviathan* argues for a social contract and rule by an absolute sovereign. Hobbes wrote that civil war and the brute situation of a state of nature ("the war of all against all") could only be avoided by strong, undivided government.

Introducing Philosophy

1989 Robert C. Solomon Based on the idea that philosophy is a truly exciting and accessible subject, this engaging text acquaints students with the core problems of philosophy and the many ways in which they have been answered. It acknowledges that philosophy is very much alive today but is also deeply rooted in the past—in the many traditions that converge and diverge from ancient Greece, ancient China, and ancient India. Accordingly, the book combines substantial original sources from significant works in the history of philosophy with detailed commentary and explanation that help to clarify the readings. The selections range from the oldest known fragments to cutting-edge essays in feminism, multiculturalism, and cognitive science. In this seventh edition, the readings have been edited for clarity and conciseness and include new selections from *The Economist*, Robert Kane, John Corvino, Cheshire Calhoun, Nelson Mandela, Mencius, and Hsun Tsu. Each chapter is followed by a summary, a glossary, and a bibliography with suggestions for further readings. Important philosophical terms are carefully introduced within the text and also

summarized at the end of each chapter, and brief biographies of the philosophers are provided at the end of the book. Ideal for courses in introductory philosophy, *Introducing Philosophy: A Text with Integrated Readings*, 7/e presents students with various alternatives on critical philosophical issues and encourages them to arrive at their own conclusions.

Legend introducing philosophy solomon 10th edition pdf pdf. The bone marrow replaces small amounts of blood is lost due to some reason without making a person anemic. But in cases where considerable amount of blood flows in small amount of time as a result of an injury due to a serious example for instance, it may not be possible for bone marrow to replace RBCs so quickly resulting in anemia. Also, losing small amounts of blood over long periods of time may also lead to anemia. Example of this situation can be seen in girls who get heavy periods attributed mainly to deficiency of iron in the diet.

Anemia due to iron deficiency is the most common kind of anemia in the United States. It occurs mainly due to lack of iron in a person's diet. A teen with iron deficiency would have lower hemoglobin production and consequently lower RBCs. When the production of RBCs is low the person is regarded as anemic. The signs of anemia are paleness and tiredness. There can be other reasons as to why enough RBCs are not produced in the body. Folic acid and Vitamin B-12 are also essential to produce RBCs. Getting these in adequate quantities is this important too. There can be a problem with bone marrow's working too resulting in anemia.

Hemolytic anemia occurs when a person has RBCs whose lifespan is shorter. The bone marrow may not be able to produce new blood cells if the blood cells die too early. This can result due to many reasons including person having disorders like sphenocytosis or sickle cell anemia. In some cases the immune system of the body may itself destroy the RBCs. In some cases certain antibodies can form in the blood as a result of reaction to certain drugs or infections and may attack the RBCs.

There is a great consensus among the parents whether their children would outgrow asthma as they grow up. But the truth is it depends from child to child. While some children experience improvement in their teens others see asthma becoming even more severe. But almost half of the children who have asthma outgrow asthma as they grow although some symptoms may come back later.

Many parents have questions like whether their children can take part in sport activities. The answer is both yes and no. Some kids may get an asthma attack when they participate in exercises like running. But with proper management a teenager suffering from asthma can actively participate in sports. Special aerobic exercises can improve airway function. This strengthens the breathing muscles. Some of the ways that one can participate in sports is to follow the regimen of stretching the muscles prior to and after exercising, nose-breathe instead of breathing through the mouth and make sure that humidified air passes through the airways. Also parents should make sure that the adolescent has taken all prescribed medication supposed to be taken before they begin exercising. Carrying a reliever is a must for asthmatic teens which would come handy if asthma attack occurs. Asthmatic teenagers should make sure that they wear something over their mouth and nose to stop cold air from entering.

It is not easy for adolescent teens to attend school when they have asthma but it is not difficult also at the same time if proper coordination is made among the teenager, doctor, family and school employees. It is a good idea to consult teachers, nurses and other pertaining employees of the school and let them know that the teenager has asthma and may have special requirements. Also, let the school management know on medications the teenager regularly takes and how to help the teenager when an attack occurs. The school staff should be asked to treat the teen normally once the attack subsides. The physical education coach should also be informed about the condition so that he/she can let the kid stretch the muscles before any exercises or to deal with asthma attack induced due to exercises. Also, before admitting the teenager to a new school care must be taken to check the quality of air, irritants and allergens if any present in the school. The school staff should take considerations to avoid symptoms which could hamper the energy level kids. Also asthmatic teens should be assured from time to time that they are no different from others and asthma in any way does not slow them down, They need this emotional confidence otherwise they may have personality problems.

Curse introducing philosophy solomon 10th edition pdf pdf___ Seventy four percent of females above fourteen years and sixty percent of females below fifteen years have reported to have involuntary sex. Fifty percent of the adolescent pregnancies are within the time period of six months after the initial sexual intercourse. More than nine hundred thousand teenagers are reported to have become pregnant every year in the United States. Fifty one percent of the adolescent pregnancies result in live birth, thirty five percent result in induced abortion and fourteen percent result in stillbirths or miscarriages. Four out of ten adolescent females get pregnant, before they turn twenty, at least once. Twenty five percent of adolescent deliveries aren't the mother's first child. When a teenager gives birth to her first child, she increases the risk of begetting another child. One third of the adolescent parents are themselves result of adolescent pregnancies.

There are many reasons why adolescents choose to become sexually active at an early stage in life. The reasons can be early pubertal development, poverty, sexual abuse in childhood, lack of parent's attention, lack of career goals, family and cultural patterns of early sex, substance abuse, dropping out from school and poor school performance. Factors which discourage an adolescent to become sexually active are stable family environment, parental supervision, good family income, regular prayers, connectedness with parents and living with complete family and both the parents. The factors which are responsible for the consistent use of contraceptive among adolescents are academic success, anticipation for successful future, and involvement in a stable relationship.

There are many medical risks associated with adolescent pregnancies. Adolescents who are less than seventeen years are at a greater risk of developing medical complications, when compared to adult females. The risk is even more in teenagers below seventeen. The weight of the child, given birth by an adolescent, is very low in these pregnancies. It is usually below 2.5 kilogram. The rate of neonatal birth is also three times greater in adolescents, when compared to adults. Other problems caused by adolescent pregnancies are prematurity of the child, birth of underweight child, poor maternal weight gain, poor nutritional status, anemia, STDs and hypertension induced due to pregnancy.

Therefore, age, gender, and height are important factor when determining the normal blood pressure level. Adults will have a higher blood pressure than the infants and teenagers. The causes of high blood pressure can be classified as primary and secondary. If the causes are definite, they are primary and if the cause is linked to some illness, it is secondary. One of the foremost effects of acupuncture on the body is relaxation. Stress is frequently pinpointed as the main precursor for a host of physical ailments. There are particular points all over the body that direct the flow of harmony and relaxation and when these are enthused, the patient becomes more at ease.

Another positive effect of this alternative therapy is increased pain control. During a session, a patient will usually feel very minimal pain as the thin needles are being inserted gradually. However, the needles are deliberately placed in varying depths, depending on the health requirements of the patient. When the needles reach the right depth, the patient will feel deeper pain, although the entire procedure is not necessarily painful.

It is also recommended for relief from chemotherapy fatigue as well as chemotherapy-related nausea. It has also been found to be largely effective for back pains, migraines, menstrual cramps, and as a pain controller for patients after undergoing surgical operations.

In this condition, the adolescent might not get periods when she enters puberty. Secondary amenorrhea is a condition where periods become irregular after a period of time and not from the start.

There are many causes of amenorrhea such as ovulation abnormality, eating disorders, birth defects, anatomical abnormalities, malnourishment, anorexia, bulimia, pregnancy, over exercising, thyroid disorder, obesity and other medical conditions. Out of these ovulation abnormalities are a common cause for absent or irregular periods. It is a must that an adolescent start getting menses at least by the age of sixteen. If not, anatomical abnormality, birth defect and other medical conditions are the cause. Adolescents who participate in sports actively and are athletic have a lower body fat content because of which they have absent menses. Even because of malnourishment, the body is incapable of sustaining pregnancy. So in turn the body itself shuts down the reproductive system and menses. Extra fat cells in the body interfere with ovulation and that is the reason why obese female have irregular menses. Amenorrhea is treated by dietary modifications, ovulation inhibitors and hormone treatment.

The History of Acupuncture

Acupuncture comes from two Latin words namely "acus" which means needle in English and "pungere" which means prick. Its history originated in China more than 2000 years ago and has evolved into various forms. Some of the techniques of acupuncture do not even use needles anymore. Vibrating objects, ultrasound and even the fingers of the practitioner have taken some of the work to make the person feel better.

Some patients will experience immediate relief after the first session but others will not experience anything at all. This is the reason that an average session should be done 12 to 15 times at least 2 to 3 times a week.

If acupuncture works for you, then the only thing you need are follow up sessions. This can be done twice every 2 weeks or monthly. It is really up to you. But don't forget to also see your regular doctor so he or she can also monitor the progress of your condition.

Types of Acupuncture

There are different types of acupuncture. Whichever you decide to use, they are designed to do the same thing and that is to relieve pain or treat certain diseases.

The duration of your treatment varies depending on the nature of your problem. Some are easy to fix compared to others especially if you are dealing with something long term. For instance, alcoholics and drug users may quit their vices after 3 or 4 months while those suffering from a disease like autism will take years as there is no known cure yet for this illness.

Before the needles are inserted, you need to undergo a physical examination and answer a few questions. There are risks involved even though it is a painless procedure because the needle might hit something vital inside but if the specialist is good, then there is nothing to worry about.

You may notice a spot of blood when the needles come off. But if you are concerned about it, talk to your acupuncturist so he or she can prescribe something.

Analysis introducing philosophy solomon 10th edition pdf pdf~The number of treatments you will need depends on the patient's condition. On average this could be from 10 to 5 treatments and 2 to 3 times a week. How much it will cost also varies as this could be from \$40 to \$150. Some insurance companies and HMO's now cover that or partially so you should check if this is included in your policy.

Anyone can try acupuncture to relieve pain or prevent one but many practitioners decline to see someone during pregnancy. But if you have already started, it is generally safe to do so until the infant is born.

Some acupuncturists may ask you to take in some herbs as part of the treatment. Since you have no idea what it can do, have this checked first by your local doctor to make sure this is safe as this could interact with the drugs you are taking causing side effects.

History introducing philosophy solomon 10th edition pdf pdf There is also auricular acupuncture where it is believed that the ear is a microcosm of the body. This means that acupuncture needles are placed on certain points on the ear so it can treat certain addiction disorders.

Myofascially-based acupuncture is often utilized by physical therapists as it involves feeling the meridian lines in search of tender points before applying needles as this is where abnormal energy flows.

Japanese styles of acupuncture referred to as "meridian therapy," tend to put more emphasis on needling technique and feeling meridians in diagnosis.

The needles used in acupuncture are very small and you will probably feel a slight twitch when the needle goes in. They will be inserted carefully to ¼ or an inch in depth and will stay there from 45 minutes to an hour depending on the condition of the patient.

If inserted properly, you should feel some cramping, distention, electric sensation or tingling which means that the treatment is working.

Needles used for acupuncture especially in the US are clean because they are required to be disposable. This prevents any chance that those who go for treatment will be contaminated by a communicable disease like hepatitis or HIV.

Opportunity introducing philosophy solomon 10th edition pdf pdf~In some cases, acupuncture is more effective when the needles are first heated. This technique is known as "moxibustion." Here, the acupuncturist lights a small bunch of the dried herb called moxa or mugwort and holds it above the needles. The herb, which burns slowly and gives off a little smoke and a pleasant, incense-like smell, will never directly touch your body.

Another variation is electrical acupuncture. Here, electrical wires are hooked up to the needles and a weak current runs through it which may cause no or little sensation at all.

It is also possible that herbal medications will also be prescribed by the acupuncturist for your treatment to be successful.

Miracle introducing philosophy solomon 10th edition pdf pdf~When looking for an acupuncturist, make sure that person is licensed. Before he or she can obtain one, they have to complete 4 years of training at an approved college of oriental medicine. In the state of California, one governing body that gives the person the title is the California Acupuncture Committee.

If they get this from another organization, a copy of their license must always be clearly displayed in the practitioner's office. One example is the National Certification Commission for Acupuncture and Oriental Medicine.

When choosing an acupuncturist, there are a few things you should ask aside from their credentials. You should know what styles of acupuncture is used as there are some techniques that do not use needles to treat a patient.

If you're already a CPA, you can serve the general public. You will be called a public accountant once there is already the so-called practitioner-client connection or relationship. Even those accountants who are not yet certified can already practice their profession. Oftentimes, CPAs join partnerships and they have a wide scope of clientele from the local area to the national and even international clients at times.

Being a government accountant is another career. In this profession, you will be working for the government, whether local, state, or federal. Fifth, medical doctors do not believe in the potential of alternative medicine. This is not true because there are more doctors these days that are open to the idea that there are other ways to help patients aside from conventional medicine. In fact, some of them even recommend an acupuncturist if they know that what they have done is not effective.

Another myth is that every patient will undergo the four needle technique. This is not true and it will only be used when the specialist feels that the energy of the patient is virtually not moving as a last resort.

The seventh myth is that it is better for a medical doctor to perform acupuncture. This is wrong because the training is much different than that taught in medical school. Students who have an acupuncturist license train for 3,000 hours before they are allowed to practice this profession. So between an acupuncturist and a medical doctor, you should go with someone who has learned about this much longer.

Insulin is a hormone produced by the body in order to get energy by converting starches, sugar and other items. Since the insulin isn't used properly in diabetic people, the blood sugar level increases. This glucose buildup is found in blood and is then passed onto the urine and comes out of the body and the major source of body energy is lost.

Diabetes is a serious chronic disease and should be handled at proper time; otherwise it can create serious problems. It can pose a risk and can damage parts of the human body such as eyes, teeth, gums, blood vessels, nerves, and kidneys. This is the reason why diabetes is responsible in most of the cases of adult blindness, kidney failure and lower limb amputations. And if left untreated, it can cause stroke, heart disease and eventually, death. These problems are not only faced by adults, but also adolescents who get diabetes in their childhood. Anorexia nervosa is the restrictive form, where the intake of food is limited severely. In bulimia nervosa is the eating disorder where the adolescent binges on food and then tries to minimize the effects by forcibly vomiting, fasting, and catharsis or over exercising. When handling adolescence eating disorders, they must be handled differently from adult eating disorders. Adolescents face problems such as growth retardation, suppressed height, abnormal weight, pubertal delay, menstrual periods absence, and menses unpredictability. When the adolescent is growing there will be critical tissue components loss like loss of body fat, muscle mass and bone mineral.

Nutritional imbalance is also caused which reflect abnormalities in the levels of vitamins, mineral and other trace elements. The problem is that these abnormalities cannot be recognized clinically. But since protein and calories are essential to the growth of the adolescent, it is important to trace their abnormalities. Because of the problems, healthy adulthood is not a possible thing. Because of all these reasons, it is important to diagnose adolescence eating disorders as early as possible. Eating disorders give rise to peak bone mass impaired acquisition in case of adolescents. When they turn into adults, this problem aggravates to osteoporosis. Even internal organs get affected due to eating disorders. All this can be prevented by early intervention so as to limit, prevent and ameliorate medical complications, which can turn become life threatening.

Adolescents who practice unhealthy weight control practices and are obsessive about figure, weight, food or exercise should be treated clinically. Not only should the symptoms be checked, but their duration, intensity and frequency should also be checked. Although most of the physical complications caused due to eating disorders get solved with the help of nutritional rehabilitation some of the conditions become irreversible and the long term consequences of this are very dangerous. It is best if the eating disorders are recognized in the early stages as it won't result in irreparable damage. Usually x-ray of the teeth is taken to evaluate the disease. Periodontal disease is classified into different types based on what stage the disease is in. The mildest form of gum disease is known as "gingivitis" in which gums become swollen, red and tender resulting in bleeding while daily brushing and flossing. Gingivitis is again divided into 4 groups primarily acute, sub-acute, recurrent and chronic. Acute gingivitis is nothing but sudden appearance which lasts for shorter duration and could be painful. In this stage the deterioration of the bone in the vicinity of the tooth becomes evident. The common symptoms include red gums that bleed; mouth tastes bad; loose teeth; tooth loss. Proper treatment is a must to control the disease and prevent further deterioration. Periondontitis which is in moderate to advanced stage shows signs of major loss of tissue and bone loss near the teeth.

There are various treatments available for periodontal disease which is decided by the dentist depending on teenager's age, medical history and health in general. The method of treatment also depends on the extent to which disease has reached. The tolerance of the teenager to certain medicines, therapies and procedures are also taken into consideration. Acupuncture is the practice of inserting fine needles into specific points in the body for therapeutic purposes. According to theory, these specific points called "acupuncture points" lie along pathways of the body along which one's vital energy is said to flow. The needles are used to promote free-flow of energy in areas of the body that circulation may have stagnated. Although acupuncture is practiced in many Asian cultures such as Japan, Tibet, and Korea the practice is commonly known to have originated in China.

Many doctors agree that as long as a medication is not detrimental to ones health, then there is no reason why it should not be used if there are noticeable benefits. Most scientists would also state that it is simply due to a lack of research that the therapeutic properties of acupuncture have not yet been proven.
