Essentials of Economics 2012 R Glenn Hubbard The authors believe that students can learn to apply economics principles successfully if they learn them in a familiar context. By using a wealth of relevant global and local businesses examples and case studies, Essentials of Economics makes the subject relevant and meaningful.

Exploring Macroeconomics 2004 Robert L. Sexton This is not a traditional encyclopedic text filled with technical details. Rather it is a modern, "back-to-basics" book written expressly to promote economic literacy and engage students in learning about how economics affects them as citizens in our society. Coupled with pedagogical innovations that are well-grounded in learning theory research, the text's visually effective design and captivating content inspires students to actually read the chapters. It succeeds like no other text in taking the intimidation out of economics and in meeting its goal of explaining the material in a manner that will "bring students the same feeling of excitement and relevance" the author felt when taking his first economics class.

The Ethical Algorithm 2019-10-04 Michael Kearns Over the course of a generation, algorithms have gone from mathematical abstractions to powerful mediators of daily life. Algorithms have made our lives more efficient, more entertaining, and, sometimes, better informed. At the same time, complex algorithms are increasingly violating the basic rights of individual citizens. Allegedly anonymized datasets routinely leak our most sensitive personal information; statistical models for everything from mortgages to college admissions reflect racial and gender bias. Meanwhile, users manipulate algorithms to "game" search engines, spam filters, online reviewing services, and navigation apps. Understanding and improving the science behind the

algorithms that run our lives is rapidly becoming one of the most pressing issues of this century. Traditional fixes, such as laws, regulations and watchdog groups, have proven woefully inadequate. Reporting from the cutting edge of scientific research, The Ethical Algorithm offers a new approach: a set of principled solutions based on the emerging and exciting science of socially aware algorithm design. Michael Kearns and Aaron Roth explain how we can better embed human principles into machine code - without halting the advance of data-driven scientific exploration. Weaving together innovative research with stories of citizens, scientists, and activists on the front lines, The Ethical Algorithm offers a compelling vision for a future, one in which we can better protect humans from the unintended impacts of algorithms while continuing to inspire wondrous advances in technology.

With ever-changing US and world economies, the 7th Edition has been updated with the latest developments using new real-world business and policy examples. Supporting Students for Success in Online and Distance Education 2012 Ormond Simpson Supporting Students for Success in Online and Distance Learning, Third Edition, provides a comprehensive overview of student support both on and off campus. While online and distance learning are the world's fastest growing areas of educational development, they have a fundamental weakness—their graduation rates, which can be lower than 20 percent. In this powerful new edition, Ormond Simpson builds on a rich history of research in distance and e-learning to show how retention rates can be improved through tested support methods, often at a net financial profit to the institutions involved. By comparing the evidence as well as the cost-effectiveness of various support tactics, this book describes how to promote student success and encourage skill-development from a number of different perspectives: definitions and purpose, theory and psychology, ethics, costs and benefits, activities, sources, media, proactive and reactive, assessment and feedback, staff development, writing support into course materials, research, quality assurance and institutional structures. This concise, practical guide is informal and jargon-free, yet its approach to evidence is rigorous, making it invaluable reading for all those interested in recruiting and teaching diverse students for successful online and distance learning.

Foundations of Economics 2003-06 Robin Bade In August 2006, we are launching a new, streamlined version of MyEconLab to better fit the needs of both students and professors. Order the ISBN above if your course begins before 8/1/06, or click here if your course begins after 8/1/06. Foundations of Economics was developed on the premise that economics is a core competency for the responsible citizen and a foundation tool for every type of career. The Bade/Parkin package is designed to encourage learning by doing. Each

chapter concentrates on a manageable number of core concepts that are called out in the beginning-of-chapter Checklist. Students know what they're expected to learn and are given the chance to apply those lessons to real-world problems. Practice is the cornerstone of the innovative Bade/Parkin approach. A full page Checkpoint containing a Practice Problem with solution and a parallel Exercise immediately follows each main idea. Checkpoints serve as stopping points and encourage students to practice using a concept before moving on. Different learning styles need different learning tools, and Bade/Parkin's extensive and tightly integrated web environment puts students in the driver's seat and allows them to use technology in the way that suits them best.

Industrial Organization, Trade, and Social Interaction 2010-01-01 Gregory K. Dow B. Curtis Eaton is one of Canada's leading microeconomists. As an applied economic theorist, Eaton has contributed greatly to industrial organization literature and has also worked in labour economics, economic geography, and organizational theory. The essays in this volume, by former students and present and former colleagues, call attention to the path-breaking work of Professor Eaton. The first two chapters provide a short overview of Eaton's research contributions and argue that his work laid the foundation for important research programs across the country. The remaining chapters, including an unpublished paper by Eaton himself, consist of original work that can be divided into the three broad categories of industrial organization and spatial competition, trade and productivity, and social interaction. Not only a collection of laudatory essays, Industrial Organization, Trade, and Social Interaction presents cutting edge research by leading scholars.

Research Methods in Crime and Justice 2013-08-22 Brian L. Withrow This fresh and innovative hybrid text/online material for undergraduate CJ RESEARCH METHODS uniquely addresses the fundamental teaching issue for this course: how to communicate and successfully teach students that their future success as criminal justice practitioners is linked to their acquisition of research skills.? The author Brian Withrow, a former Texas State Trooper, widely published academic researcher, and teacher of the undergraduate methods course, consistently demonstrates how research skills aren't just essential to university academic researchers; they are essential to student success as criminal justice practitioners, and to all who want to succeed in an information economy. More than 80 short, sharply focused examples throughout the text rely on actual research that is conducted by, on behalf of, or relevant to criminal justice practitioners. The book engages students' interests like no other. The online materials provide a wide array of instructor support material, all written by the author, and also offer a unique feature, The Researcher's Notebook, which provides students (and their instructors) a series of structured exercises leading to the development and completion of a research question, conducting a literature review, and designing a research method that provides the data necessary to answer the research question - all with a minimal amount of instructor supervision. On the Foundations of Monopolistic Competition and Economic Geography 1997 Buford Curtis Eaton A collection of 16 joint papers published between 1975 and 1993 that address models of value theory and related issues in the broader context of developing a deeper understanding of product differentiation, including spatial differentiation, and the industrial structures that generate the phenomenon. The Canadian economists (Simon Fraser U.) explain why they reject the neoclassical competitive vision of the economy, describe models that they have drawn on to develop their own vision, and outline their world view and distinguish it from others. Among their specific topics are the introduction of space into the neoclassical model of value theory, comparison shopping and the clustering of homogeneous firms, the durability of capital as a barrier to entry, and an economic theory of central places. Handbook of Economics and Ethics 2009-01-01 Jan Peil This volume pulls together a remarkable collection of contributors designed to challenge the positive-normative dichotomy in economic methodology. . . The intent of this publication is to provide a reference manual for those seeking insights into the connections between economics and ethics. It succeeds in that goal and should become a starting point for anyone who believes that mainstream economics needs methodological reorientation. . . Anyone interested in ethics and economic methodology would do well to have this reference book handy. Highly recommended. J. Halteman, Choice This new Handbook of Economics and Ethics makes a substantial contribution as a wide-ranging up-to-date reference work, including original developments, on these two fundamentally interconnected fields. This contribution is particularly timely, given the increasing attention being paid to economics as a moral science. The Handbook contains seventy-five expert entries on subjects ranging from the history of economics and philosophy to conceptual analysis of ethics in various aspects of modern economics, while representing a diversity of views. Sheila Dow, University of Stirling, UK The Handbook of Economics and Ethics portrays an understanding of economic methodology in which facts and values, though distinct, are closely interconnected in a variety of ways. From theory building to data collection, and from modelling to policy evaluation, this encyclopaedic Handbook is at the intersection of economics and ethics. Irene van Staveren and Jan Peil bring together 75 unique and original papers to provide up-to-date insights on topics such as markets, globalization, human development, rationality, efficiency, and corporate social responsibility. The book presents contributions from an array of international scholars using methodological and theoretical approaches, and convincingly demonstrates the death of the positive/normative dichotomy that so long held economics in its grip. This invaluable resource will strongly appeal to students of economics and economic methodology, philosophy of science and ethics. It will also be of great benefit to academics and policy-makers involved in economic policies and ethics.

Quantile Regression 2005-05-05 Roger Koenker Quantile regression is gradually emerging as a unified statistical methodology for estimating models of conditional quantile functions. By complementing the exclusive focus of classical least squares regression on the conditional mean, quantile regression offers a systematic strategy for examining how covariates influence the location, scale and shape of the entire response distribution. This monograph is the first comprehensive treatment of the subject, encompassing models that are linear and nonlinear, parametric and nonparametric. The author has devoted more than 25 years of research to this topic. The methods in the analysis are illustrated with a variety of applications from economics, biology, ecology and finance. The treatment will find its core audiences in econometrics, statistics, and applied mathematics in addition to the disciplines cited above.
