Story of" oracle dba exam 1z0 417 performance and-OCD is a sign of brain circuitry's unusual functioning and it involves the striatum part of the brain. The brain activity patterns of such people differ from normal people and people with other mental disorders. Researchers have concluded that OCD is usually a family problem and is a disorder of the brain. Streptococcal bacterial infection can create or worsen the condition of OCD. Adolescents with no family history of OCD can also develop it. Most of the adolescents feel embarrassed to talk about their OCDs. They think that people will label them as crazy and this will make them feel ashamed. This will make it difficult for the parents to talk to their children about their OCD, in order to solve them. Parents need to develop good communication skills for this purpose. Parent's support is also very important to the adolescent. Cooperation is extremely important along with treatment, because if the problem is not treated the adolescent will grow into a disturbed adult.

Most of the adolescents with OCD can receive effective treatment. The treatment can include psychotherapy and intake of medications such as fluoxetine, clomipramine, fluvoxamine, paroxetine, sertraline and other serotonin reuptake inhibitors. When OCD is caused due to streptococcal infection, the adolescent can be administered with antibiotics to kill the bacterium which is causing it. Exposure and response prevention behavioral therapy is very useful in solving OCD. In this therapy, the adolescent is wotedly exposed to his/her fears which give him/her obsessive thought. After that he/she is trained to avoid these thoughts and the rituals which he/she carries out to tackle the anxiety. An adolescent having OCD can also have depression, substance abuse, attention deficit hyperactivity disorder, eating disorders, and other types of anxiety disorders. When a person with OCD and other mental illness, is treated, OCD becomes more difficult to treat and even diagnose.

They can determine what created the profits as well as the losses. Accountants form some sort of business equation so justify the profits & losses of a business. By doing so, they can easily tell a company's net worth.

It seems that by simply starting to define one accounting term, it eventually leads to defining other terms as well. Net worth is another term that is quite difficult to understand. It refers to the resulting amount after deducting the liabilities of a company from the assets. Private companies refer to net worth as owner's equity.

Why owner's equity? Well, after deducting all the liabilities, what's left basically belongs to the owner. In the case of public companies, the profit of the business is returned as dividends to shareholders. As you can see, before owner or shareholders of a company can take hold of the profits, all liabilities must be deducted first.
