International Armed Conflict Since 1945 2019-04-08 Herbert K. Tillema International Armed Conflict Since 1945 is a bibliographic handbook that briefly describes each of 269 international wars and other war-threatening conflicts occurring between 1945 and 1988. .

The Geography of War and Peace 2005 Colin Flint Our world of increasing and varied conflicts is confusing and threatening to citizens of all countries, as they try to understand its causes and consequences. This book takes advantage of a diversity of geographic perspectives as it analyzes the political processes of war and their spatial expression.

The Geography of War and Peace : From Death Camps to Diplomats 2004-09-24 Colin Flint Professor of Geography Pennsylvania State University How and why war and peace occur cannot be understood without realizing that those who make war and peace must negotiate a complex world political map of sovereign spaces, borders, networks, and scales. This book takes advantage of a diversity of perspectives as it analyzes the political processes of war and their spatial expression. Topics include terrorism, nationalism, religion, drug wars, water conflicts, diplomacy, peace movements, and post-war reconstruction.

Military Geography 1998 John M. Collins This book covers many topics that are crucial to military planning but often receive only passing mention in histories or briefings. Collins, a former Army officer, stresses land geography, but he does not stint oceans, the atmosphere, or interplanetary space. His discussions of urban areas are too brief, given the increasing amount of large-scale violence in cities since the end of World War II.

Military geography for professionals and the public 1998 Military geography, one of several subsets within those broad confines, concentrates on the influence of physical and cultural environments over political-military policies, plans, programs, and combat/support operations of all types in global, regional, and local contexts. Key factors displayed in table 1 directly (sometimes decisively) affect the full range of military activities: strategies, tactics, and doctrines; command, control, and organizational structures; the optimum mix of land, sea, air, and space forces; intelligence collection; targeting; research and development; the procurement and allocation of weapons, equipment, and clothing; plus supply, maintenance, construction, medical support, education, and training.

The Military Balance in the Cold War 2007-07-20 David Walsh This book examines the impact of American perceptions of the military balance between the United States and the Soviet Union during the key period of 1976-1985. That decade witnessed the decline of the US-Soviet détente and the resurgence of superpower confrontation, often called the 'Second Cold War'. Among the factors contributing to this shift was the American view of the military balance - whether the United States had been or was being overtaken by the Soviet Union in terms of military capability. Since then, the military balance has been viewed within the overall context of issues impacting superpower relations during this era. David Walsh examines the full range of issues - strategic and European-based forces, power-projection capabilities, and military spending - and their role in shaping perceptions, not just of the military balance but also in such key areas of international relations as arms control, trans-Atlantic diplomacy and Third World conflict. In doing so, he shows how the perceptions of the 1970s contributed to key policy decisions in the 1980s, which themselves played a significant role in bringing the Cold War to an end. The Military Balance in the Cold War will be of interest to advanced students of Cold War history, strategic studies, US foreign policy and international relations in general.

The Culture of National Security 1996 Peter J. Katzenstein The political transformations of the 1980s and 1990s have dramatically affected models of national and international security. Particularly since the end of the Cold War, scholars have been uncertain about how to interpret the effects of major shifts in the balance of power. Are we living today in a unipolar, bipolar, or multipolar world? Are we moving toward an international order that makes the recurrence of major war in Europe or Asia highly unlikely or virtually inevitable? Is ideological conflict between states diminishing or increasing?

Pax Britannica: British Counterinsurgency In Northern Ireland, 1969-1982 2014-12-22 Montgomery McFate British forces conducted operations short of war in Northern Ireland for twenty-five years, yet they were unable to defeat the Provisional Irish Republican Army (PIRA). In this heretofore unpublished dissertation from 1994, McFate identifies how certain cultural, legal, and political factors contributed to the longevity of violence in Northern Ireland. Viewing counterinsurgency as a self-reproducing cultural system with its own complex logic, McFate argues that limitations on violence prescribed by the counterinsurgency principle of minimum force paradoxically resulted in a very high degree of sustainability of conflict. Certain other factors—such as emergency security legislation, reverence of military competence, and geo-strategic compression of violence within a cordon sanitaire—enabled normalization and reproduction of the conflict. In opposition to this order, the 1981 Republican hungerstrikes used the silence of the body to incriminate the state, 'embodying' a resistance to the war system of counterinsurgency.

Progress in Political Geography (Routledge Revivals) 2014-06-03 Michael Pacione Since the 1970s, the field of political geography has undergone a significant transformation, where new methodologies have been implemented to investigate the exercise of the power of the state within the urban environment. First published in 1985, the essays in this collection addressed the growing need to assess the academic revisions that had been taking place and provide a reference point for future developments in the discipline. Still of great relevance, the essays consider the most prominent themes in areas of key importance to political geography, including theory and methodology, minority groups, local government and the geography of elections. This volume will be of significant value for students of political geography, urban demography and town planning.

The Routledge Handbook of Mapping and Cartography 2017-10-04 Alexander J. Kent This new Handbook unites cartographic theory and praxis with the principles of cartographic design and

their application. It offers a critical appraisal of the current state of the art, science, and technology of map-making in a convenient and well-illustrated guide that will appeal to an international and multi-disciplinary audience. No single-volume work in the field is comparable in terms of its accessibility, currency, and scope. The Routledge Handbook of Mapping and Cartography draws on the wealth of new scholarship and practice in this emerging field, from the latest conceptual developments in mapping and advances in map-making technology to reflections on the role of maps in society. It brings together 43 engaging chapters on a diverse range of topics, including the history of cartography, map use and user issues, cartographic design, remote sensing, volunteered geographic information (VGI), and map art. The title's expert contributions are drawn from an international base of influential academics and leading practitioners, with a view to informing theoretical development and best practice. This new volume will provide the reader with an exceptionally wide-ranging introduction to mapping and cartography and aim to inspire further engagement within this dynamic and exciting field. The Routledge Handbook of Mapping and Cartography offers a unique reference point that will be of great interest and practical use to all map-makers and students of geographic information science, geography, cultural studies, and a range of related disciplines.

Arms and Warfare 1994 Michael Brzoska Arms and Warfare considers the impact of arms shipments on a conflict once it has begun. Using case studies, the authors pinpoint the timing of arms transfers and then assess the influence of these deliveries.

Mapping the Cold War 2015-04-13 Timothy Barney In this fascinating history of Cold War cartography, Timothy Barney considers maps as central to the articulation of ideological tensions between American national interests and international aspirations. Barney argues that the borders, scales, projections, and other conventions of maps prescribed and constrained the means by which foreign policy elites, popular audiences, and social activists navigated conflicts between North and South, East and West. Maps also influenced how identities were formed in a world both shrunk by advancing technologies and marked by expanding and shifting geopolitical alliances and fissures. Pointing to the necessity of how politics and values were "spatialized" in recent U.S. history, Barney argues that Cold War-era maps themselves had rhetorical lives that began with their conception and production and played out in their circulation within foreign policy circles and popular media. Reflecting on the ramifications of spatial power during the period, Mapping the Cold War ultimately demonstrates that even in the twenty-first century, American visions of the world--and the maps that account for them--are inescapably rooted in the anxieties of that earlier era.

A Strategy For Terminating A Nuclear War 2021-11-28 Clark C Abt Avoiding a nuclear war, or ending one if avoidance fails, is an important but relatively unexplored aspect of nuclear doctrine. Dr. Abt examines the feasibility of antagonists' agreeing to exclude their open cities from nuclear targeting and to replace strategic bombardment with retaliatory invasion to create less of a hair[1]trigger deterrent. Critical net assessments by U.S. strategists and the effects of such a strategy on the Soviet Union and on U.S. allies are considered, along with problems implementation might pose. The author contends that both deterrence and the potential for limiting damage are strengthened by pre-war plans for a nuclear ceasefire and stalemate short of holocaust.

Service-Oriented Mapping 2018-06-07 Jürgen Döllner This book gathers various perspectives on modern map production. Its primary focus is on the new paradigm of "sharing and reuse," which is based on decentralized, service-oriented access to spatial data sources. Service-Oriented Mapping is one of the main paradigms used to embed big data and distributed sources in modern map production, without the need to own the sources. To be stable and reliable, this architecture requires specific frameworks, tools and procedures. In addition to the technological structures, organizational aspects and geographic information system (GIS) capabilities provide powerful tools to make modern geoinformation management successful. Addressing a range of aspects, including the implementation of the semantic web in geoinformatics, using big data for geospatial visualization, standardization initiatives, and the European spatial data infrastructure, the book offers a comprehensive introduction to decentralized map production. .

Framing Discourse on the Environment 2010-04-15 Richard Alexander In this study, Richard Alexander presents a series of original and empirically based case studies of the language and discourse involved in the discussion of environmental and ecological issues. Relying upon a variety of different text types and genres - including company websites, advertisements, press articles, speeches and lectures - Alexander interrogates how in the media, press, corporate and activist circles language is employed to argue for and propagate selected positions on the growing ecological crisis. For example, he asks: How are ecological and environmental concerns articulated in texts? What do we learn about ecological 'problems' through texts from differing sources? What language features accompany ecological discourse in differing contexts and registers? Attention is especially directed at where this discourse comes into contact with business, economic and political concerns.

Shadow Government 2009-10-06 Grant R. Jeffrey Security cameras, surveillance of your financial transactions, radio frequency spy chips hidden in consumer products, tracking of your Internet searches, and eavesdropping on your e-mail and phone calls. Without your knowledge or consent, every aspect of your life is observed and recorded. But who is watching the watchers? An ultra-secret global elite, functioning as a very real shadow government, controls technology, finance, international law, world trade, political power, and vast military capabilities. Those who hold power are invisible to all but a few insiders. These unrivaled leaders answer to no earthly authority, and they won't stop until they control the world. In Shadow Government, Grant Jeffrey removes the screen that, up to now, has hidden the work of these diabolical agents. Jeffrey reveals the biblical description of Satan's global conquest and identifies the tools of technology that the Antichrist will use to rule the world. Your eyes will be opened to the real power that is working behind the scenes to destroy America and merge it into the coming global government. Armed with this knowledge, you will be equipped to face spiritual darkness with the light of prophetic truth.

The History of Cartography, Volume 6 2015-05-18 Mark Monmonier For more than thirty years, the History of Cartography Project has charted the course for scholarship on cartography, bringing together research from a variety of disciplines on the creation, dissemination, and use of maps. Volume 6, Cartography in the Twentieth Century, continues this tradition with a groundbreaking survey of the century just ended and a new full-color, encyclopedic format. The twentieth century is a pivotal period in map history. The transition from paper to digital formats led to previously unimaginable dynamic and interactive maps. Geographic information systems radically altered cartographic institutions and reduced the skill required to create maps. Satellite positioning and

mobile communications revolutionized wayfinding. Mapping evolved as an important tool for coping with complexity, organizing knowledge, and influencing public opinion in all parts of the globe and at all levels of society. Volume 6 covers these changes comprehensively, while thoroughly demonstrating the far-reaching effects of maps on science, technology, and society—and vice versa. The lavishly produced volume includes more than five hundred articles accompanied by more than a thousand images. Hundreds of expert contributors provide both original research, often based on their own participation in the developments they describe, and interpretations of larger trends in cartography. Designed for use by both scholars and the general public, this definitive volume is a reference work of first resort for all who study and love maps.

The Dynamics of Socio-Economic Development 2005-01-20 Adam Szirmai Why are poor countries poor and rich countries rich? How are wealth and poverty related to changes in nutrition, health, life expectancy, education, population growth and politics? This modern, non-technical 2005 introduction to development studies explores the dynamics of socio-economic development and stagnation in developing countries. Taking a quantitative and comparative approach to contemporary debates within their broader context, Szirmai examines historical, institutional, demographic, sociological, political and cultural factors. Key chapters focus on economic growth, technological change, industrialisation, agricultural development, and consider social dimensions such as population growth, health and education. Each chapter contains comparative statistics on trends from a sample of twenty-nine developing countries. This rich statistical database allows students to strengthen their understanding of comparative development experiences. Assuming no prior knowledge of economics the book is suited for use in inter-disciplinary development studies programmes as well as economics courses, and will also interest practitioners pursuing careers in developing countries.

Gaia Connections 2003 Alan S. Miller Gaia Connections addresses several arenas of concern as humankind faces an escalating ecological and moral crisis in this new millennium. Beginning with an overview of the history of philosophy and the importance of traditional thinking on modern-day ethical reflection, the book then looks at the development of theories of justice, the problems of equity in global human relations, the inability of existing economic systems to resolve our human and environmental dilemmas, the unnatural connections now obtaining between genuine human need and the technological drift of science, the new genetics and reproductive technologies, and the nature of modern war. The study concludes with some historical perspectives on American environmental history and the urgent need for change in our ecoethical, social, and value systems. The principal focal areas of the original edition are continued: the actual state of the global environment today, the imperative for the development of sustainable economic and resource systems, the movement within much of science toward an almost universal biological determinism, and the need for a reaffirmation of an ethical value system which places the needs of people before the needs of property and profits. The revised edition not only updates these data and the concerns of the original book but also visits a number of new issues: the movement for environmental justice, the connections between global poverty and the now almost universal allegiance to a new world market and free trade system, the progress and the dilemmas of molecular biology and genetic engineering, and the growing disarray within the global systems of political economy.

Achieving Sustaining Peace Through Preventive Diplomacy 2021-11-29 Yanjun Guo Preventive diplomacy constitutes an important part of international conflict resolution mechanisms. The countries in the Asia Pacific region have the political will to use preventive diplomacy to address the needs for sustaining peace and security. The challenge is to find approaches compatible with the consensual norms, and operational for tackling conflicts in the regional context. Structured on this thematic challenge, this book aims to present new approaches and practices of preventative diplomacy, inspired by diplomatic innovation of Asia-Pacific countries and around the world, such as adaptive peace approach, continental approach, dominant coalition, and new leadership in peacebuilding, etc., and takes account recent literature on normative issues relating to preventative diplomacy, such as international rule of law, normative entanglements and evolution, the international, impartial and independent mechanism, the evolution of the norm against child soldiers, the implementation of the woman peace and security agenda, and the role of Jus Post Bellum in the UN peace operations. It also examines how geopolitical competition and the recent covid-19 crisis impact the security of the region, and explores the connection between the Belt and Road Initiative and sustaining peace of the region. This book is a valuable reading on the recent development of approaches and norms of preventative diplomacy and how they can contribute to sustaining peace of the Asia Pacific. It can be used as a text for college students, researchers, and practitioners in the disciplines of international relations, political science, security studies, policy studies, diplomacy, and social issues.

Big Structures, Large Processes, Huge Comparisons 1984-12-01 Charles Tilly This bold and lively essay is one of those rarest of intellectual achievements, a big small book. In its short length are condensed enormous erudition and impressive analytical scope. With verve and self-assurance, it addresses a broad, central question: How can we improve our understanding of the large-scale processes and structures that transformed the world of the nineteenth century and are transforming our world today? Tilly contends that twentieth-century social theories have been encumbered by a nineteenth century heritage of "pernicious postulates." He subjects each misleading belief to rigorous criticism, challenging many standard social science paradigms and methodologies. As an alternative to those timeless, placeless models of social change and organization, Tilly argues convincingly for a program of concrete, historically grounded analysis and systematic comparison. To illustrate the strategies available for such research, Tilly assesses the works of several major practitioners of comparative historical analysis, making skillful use of this selective review to offer his own speculative, often unconventional accounts of our recent past. Historically oriented social scientists will welcome this provocative essay and its wide-ranging agenda for comparative historical research. Other social scientists, their graduate and undergraduate students, and even the interested general reader will find this new work by a major scholar stimulating and eminently readable. This is the second of five volumes commissioned by the Russell Sage Foundation to mark its seventy-fifth anniversary. "In this short, brilliant book Tilly suggests a way to think about theories of historical social change.... This book should find attentive readers both in undergraduate courses and in graduate seminars. It should also find appreciative readers, for Tilly is a writer as well as a scholar." —Choice

Raising Cartographic Consciousness 1999 Mark Polelle In this book, Mark R. Polelle presents an overview of the evolution of geopolitical thought in three national contexts—the United States, Britain, and Germany—from 1870 to the present. Polelle examines in particular the rise of the defense intellectual and shows how the measurement of national power has changed. Geopolitics early in the century assumed the centrality of space and territory, but we close the century with despacialized concerns over geo-economic conflicts (e.g., that between Japan and the United States). Polelle explains this shift by putting it into historical context. His use of both historical and geographical methods makes Raising Cartographic Consciousness a valuable book for historians, geographers, and political scientists.

Socio-Economic Development 2015-06-18 Adam Szirmai Taking a comparative and multidisciplinary approach, this textbook offers a non-technical introduction to the dynamics of socio-economic development and stagnation.

The Heart of War 2003-08-29 Gwyn Prins Military forces are now confronted, not only with the non-conventional threats of terrorism but the moral dilemmas of humanitarianism, intervention and human rights. Gwyn Prins explores these conflicting impulses using a variety of fascinating examples: the September 11th attacks and the history of 'spectacular' terrorism, humanitarian intervention in Bosnia, Kosovo, West Africa and elsewhere, the extradition of General Pinochet for human rights abuses and the nuclear issue, in the light of ongoing conflict between India and

Pakistan. Wide-ranging and challenging, this book will interest all those seeking to understand the enormous recent changes in military strategy and global politics.

An Introduction to Political Geography 2002-09-26 John Rennie Short Entirely revised and updated, this reviews the history of the rise and fall of centres of power and draws on a wide range of case studies to illustrate current trends and offers discussion of future developments in a useful, compact form.

Arms Transfers and Dependence 2021-10-23 Christian Catrina First published in 1988, Arms Transfers and Dependence was written to provide a view of arms transfers in the context of the global distribution of power. The book analyses different types of dependence and is focused on comparing the enhancement of military capabilities as a result of arms transfers with the dependence that may be caused by those transfers. In doing so, it provides an overview of how particular structures of imports and exports of arms lead to dependence.

Ethics in Everyday Places 2022-11-01 Tom Koch An exploration of moral stress, distress, and injuries inherent in modern society through the maps that pervade academic and public communications worlds. In Ethics in Everyday Places, ethicist and geographer Tom Koch considers what happens when, as he puts it, "you do everything right but know you've done something wrong." The resulting moral stress and injury, he argues, are pervasive in modern Western society. Koch makes his argument "from the ground up," from the perspective of average persons, and through a revealing series of maps in which issues of ethics and morality are embedded. The book begins with a general grounding in both moral stress and mapping as a means of investigation. The author then examines the ethical dilemmas of mapmakers and others in the popular media and the sciences, including graphic artists, journalists, researchers, and social scientists. Koch expands from the particular to the general, from mapmaker and journalist to the readers of maps and news. He explores the moral stress and injury in educational funding, poverty, and income inequality ("Why aren't we angry that one in eight fellow citizens lives in federally certified poverty?"), transportation modeling (seen in the iconic map of the London transit system and the hidden realities of exclusion), and U.S. graft organ transplantation. This uniquely interdisciplinary work rewrites our understanding of the nature of moral stress, distress and injury, and ethics in modern life. Written accessibly and engagingly, it transforms how we think of ethics—personal and professional—amid the often conflicting moral injunctions across modern society. Copublished with Esri Press

Space Battles which Changed Past
It had been the year 23, and the world was at the verge of war. The United States and China, the two superpowers, were entangled in a fierce contest, competing for resources, dominance, and dominance. They had both engineered high-tech arms, including lasers, drones, and satellites, which can strike anywhere, any time. They had secretly constructed space stations, which can launch nuclear missiles, that can obliterate the earth. They were set to utilize them, if ever necessary. But they were not the only ones. There existed a third power, a hidden entity, which had been monitoring them both, waiting for them both, preparing for them both. They were the extraterrestrials, and they had arrived to stop them both. They had arrived to rescue the globe, or to terminate it all. They had come to initiate the space wars that changed history.

The Mystery of the Missing Diamond

It was a shadowy and stormy night. The rain was pouring down, and the wind was howling. In the heart of the town, there was an exhibition, where a precious diamond was on display. The diamond was named the Star of Africa, and it was the greatest and most gorgeous diamond in the world. It was secured by a sophisticated security mechanism, and a squad of equipped guards. No one could rob it, or so they assumed. But an individual did. Someone managed to circumvent the safeguard, to elude the sentinels, to shatter the glass, and to take the diamond. And no one saw them, no one heard them, no one knew who they were. They left no mark, no lead, no testimony. They vanished into the darkness, with the Star of Africa. And the mystery of the missing diamond began.
