The Rust Programming Language (Covers Rust 2018)

2019-09-03 Steve Klabnik The official book on the Rust programming language, written by the Rust development team at the Mozilla Foundation, fully updated for Rust 2018. The Rust Programming Language is the official book on Rust: an open source systems programming language that helps you write faster, more reliable software. Rust offers control over low-level details (such as memory usage) in combination with high-level ergonomics, eliminating the hassle traditionally associated with low-level languages. The authors of The Rust Programming Language, members of the Rust Core Team, share their knowledge and experience to show you how to take full advantage of Rust's features--from installation to creating robust and scalable programs. You'll begin with basics like creating functions, choosing data types, and binding variables and then move on to more advanced concepts, such as: Ownership and borrowing, lifetimes, and traits Using Rust's memory safety guarantees to build fast, safe programs Testing, error handling, and effective refactoring Generics, smart pointers, multithreading, trait objects, and advanced pattern matching Using Cargo, Rust's built-in package manager, to build, test, and document your code and manage dependencies How best to use Rust's advanced compiler with compiler-led programming techniques You'll find plenty of code examples throughout the book, as well as three chapters dedicated to building complete projects to test your learning: a number guessing game, a Rust implementation of a command line tool, and a multithreaded server. New to this edition: An extended section on Rust macros, an expanded chapter on modules, and appendixes on Rust development tools and editions.

Max Trescott's G1000 Glass Cockpit Handbook

2006-01-01 Max Trescott There is a revolution sweeping through general aviation. In less than two years, the industry has converted to ship all new aircraft with glass cockpits, rather than traditional instrument panels. The most popular of these is the Garmin G1000, and now there's a comprehensive guide describing how to operate these airplanes: Max Trescott's G1000 Glass Cockpit Handbook. This book makes it easy for you to quickly become an expert on operating and programming the G1000 system in any aircraft. Instructors agree that the cockpit is not an ideal learning environment. Reading this book, written by a Master Flight Instructor, is one of the most efficient and cost effective ways to learn the G1000 before stepping into the cockpit for your first transition lesson.

Training and Racing with a Power Meter, 2nd Ed.

2012-11-27 Hunter Allen Hunter Allen and Andy Coggan, PhD have completely revised the book that made power meters understandable for amateur and professional cyclists and triathletes. Power meters have become essential tools for competitive cyclists and triathletes. No training tool can unlock as much speed and endurance as a power meter--for those who understand how to interpret their data. A power meter displays and records exactly how much energy a cyclist expends, which lends unprecedented insight into that rider's abilities and fitness. With the proper baseline data, a cyclist can use a power meter to determine race strategy, pacing, and tactics. Training and Racing with a Power Meter makes it possible to exploit the incredible usefulness of the power meter by explaining how to profile strengths and weaknesses, measure fitness and fatigue, optimize workouts, time race readiness, and race using power. This new edition: Enables athletes to predict future performance and time peak form Introduces fatigue profiling, a new testing method to pinpoint weaknesses Includes two training plans to raise functional threshold power and time peaks for race day Offers 75 power-based workouts tuned for specific training goals This updated edition also includes new case studies, a full chapter on triathlon training and racing, and improved 2-color charts and tables throughout. Training and Racing with a Power Meter, will continue to be the definitive guide to the most important training tool ever developed for endurance sports.

Contact Flying

2008-05 Jim Dulin Unlike conventional aviation authors and instructors I do not teach primary flying, crop dusting, pipeline patrol flying, bush flying, helicopter medical evacuation flying, and air to ground gunnery using instruments inside the aircraft as the primary situational awareness tool. Rather I teach Dutch rolls,

slow flight and stalls over the runway, the energy management turns, use of ground effect on all takeoffs, the brisk walk apparent rate of closure approach, hover taxi in fixed wing aircraft, and low level low power mountain flying using sights, sounds, smells, and kinetics. Sight is used 99.9% of the time looking at the ground. Airspeed, nor any other instrument is used in takeoff or landing. This text teaches the art of flying in the old style at low level using ground references. Its author has over sixteen thousand hours of flying Army helicopters, crop dusters, and pipeline patrol airplanes at three feet to five hundred feet above ground level.
