Wealthier, Fairer Scotland

2017-03-08 Michael Keating The ambition of the Scottish Government is to create a wealthier and fairer nation. Following the devolution acts of 1998, 2012 and 2016, it has extensive powers and resources to fulfill its ambition. This interdisciplinary collection of essays asks how it can be achieved, given the range of powers available, economic constraints, institutions and public support. Looking at economic policy, taxation and welfare, it provides a realistic analysis of the opportunities and constraints facing a small, devolved nation. After years of debate on what powers Scotland should have, this book examines how they might be used to shape the country's future.

State Repression in Post-Disaster Societies

2017-01-20 Clair Apodaca A natural hazard is a physical event but a disaster is a social and political phenomenon. Natural hazards are, for the most part, unavoidable and apolitical. However, they carry with them serious political, economic, and social consequences. Disasters also have adverse consequences on human rights standards. An understanding of the relationship between disasters and human rights outcomes requires knowledge of how disasters increase grievance and frustration, and impact the probability of contentious political behavior. To date, there has been little empirical or theoretical research on the specific circumstances under which disasters impact antigovernment political behavior, and even less is known of the causal chain between a natural disaster, protest activity, and human rights violations. In this book, Clair Apodaca maps a comprehensive causal model of the complex interactions between disasters and human rights violations. She claims that pre-existing inequalities and societal grievances turn a natural hazard into a disaster. A grievance-based theory of protests suggests that the underlying structural causes are social and economic group disparities, political exclusion, along with population pressures. To turn these all too common conditions into active political behavior requires a triggering event. When a damage–loss is the primary consequence of a disaster, the government and international community can compensate victims by providing rebuilding and reconstruction aid. However, when the disaster results in high numbers of fatalities, the government and international community cannot adequately compensate survivors for their losses. Grievances cannot be easily or effectively eliminated, and survivors and their supporters mobilize for change even if they are likely to face state repression. Clair Apodaca offers a unique contribution to our understanding of human rights violations. She effectively shows that there is a causal process between hazard events, protest activities, and government repression, a finding that is key to scholars, practitioners, and policy-makers working in this field.

Creating Stellar Lessons with Digital Tools

2022-05-13 Kenneth J. Luterbach Creating Stellar Lessons with Digital Tools prepares teachers in training and in-service teachers to use technologies for design and development activities with middle and high school students. While software, open resources, handheld devices, and other tools hold great potential to enhance learning experiences, teachers themselves must model technology use in ways that inspire students to become producers and leaders rather than consumers and followers. Featuring concrete applications in social studies, English, mathematics, and science scenarios, this book provides pre-service teachers with seven paths to creatively integrate and innovate with computational thinking, datasets, maker spaces, visual design, media editing, and other approaches.

East Asia Pacific at Work

2014-05-07 World Bank The unprecedented progress of East Asia Pacific is a triumph of working people. Countries that were low-income a generation ago successfully integrated into the global value chain, exploiting their labor-cost advantage. In 1990, the region held about a third of the world’s labor force. Leveraging this comparative advantage, the share of global GDP of emerging economies in East Asia Pacific grew from 7 percent in 1992 to 17 percent in 2011. Yet, the region now finds itself at a critical juncture. Work and its contribution to growth and well-being can no longer be taken for granted. The challenges range from high youth inactivity and rising inequality to binding skills shortages. A key underlying issue is economic informality, which constrains innovation and productivity, limits the tax base, and increases household vulnerability to shocks. Informality is both a consequence of stringent labor regulations and limited enforcement capacity. In several countries, de jure employment regulations are more stringent than in many parts of Europe. Even labor regulations set at reasonable levels but poorly implemented can aggravate the market failures they were designed to overcome. This report argues that the appropriate policy responses are to ensure macroeconomic stability, and in particular, a regulatory framework that encourages small- and medium-sized enterprises where most people in the region work. Mainly agrarian countries should focus on raising agricultural productivity. In urbanizing countries, good urban planning becomes critical. Pacific island countries will need to provide youth with human capital needed to succeed abroad as migrant workers. And, across the region, it is critical to ‘formalize’ more work, to increase the coverage of essential social protection, and to sustain productivity. To this end, policies should encourage mobility of labor and human capital, and not favor some forms of employment - for instance, full-time wage employment in manufacturing - over others, either implicitly or explicitly. Policies to increase growth and well-being from employment should instead reflect and support the dynamism and diversity of work forms across the region.

Language, Immigration and Naturalization

2016-04-20 Ariel Loring This volume focuses on the everyday legalities and practicalities of naturalization including governmental processes, the language of citizenship tests and classes, the labelling and lived experiences of immigrants/outside rs and the media’s interpretation of this process. The book brings together scholars from a wide range of specialties who accentuate language and raise issues that often remain unarticulated or masked in the media. The contributors highlight how governmental policies and practices affect native-born citizens and residents differently on the basis of legal status. Furthermore, the authors observe that many issues that are typically seen as affecting immigrants (such as language policies, nationalist identities and feelings of belonging) also impact first-generation native-born citizens who are seen as, or see themselves as, outsiders.

The Internet as Second Action Space

2014-07-11 Aharon Kellerman One of the most significant and important advancements in information and communication technology over the past 20 years is the introduction and expansion of the Internet. Now almost universally available, the Internet brings us email, global voice and video communications,

research repositories, reference libraries, and almost unlimited opportunities for daily activities. Bridging geographical distances in unprecedented ways, the Internet has impacted all aspects of our daily lives – from facilitating the running of businesses, the attainment of services and keeping in touch with friends and family. Accessible at any time and for many of us from our mobile phones, the Internet has opened up a world of knowledge and communication platforms that we cannot now imagine living without. This book explores the concept that the Internet has become a second action space for individuals. Coexisting with traditional and "obvious" real space, the Internet serves as a novel spatial platform and action space to its subscribers all over the world. Kellerman expertly discusses this notion and examines the practical integration of cyberspace with real space. Part I examines the Internet as a platform for action and presents its relations with physical space concerning a range of uses and applications which were traditionally performed in physical space only. It discusses the idea that the Internet has become a second space and explores theoretical perspectives surrounding this notion. The Internet has undeniably made humankind more efficient and connected. Part II explores the Internet as an action space for human life, considering basic human needs, curiosity, identity and social relations. It further considers instances whereby use and application of the Internet cannot be fully performed in real space, mainly regarding people’s presentation of identity. Part III explores daily actions over the Internet, such as work, shopping, banking and social interactions. Kellerman also briefly touches on the darker aspects that the expansion of the Internet has made possible – including its role in fraud and other crimes. The concluding chapter discusses people living across the two spaces and identifies potential future developments. The Internet as Second Actions Space will appeal to students across the social sciences, in particular those studying Geography, Sociology, Media Studies, Internet Studies, Business and related disciplines.

The Economics of Chocolate

2016 Mara P. Squicciarini This book, written by global experts, provides a comprehensive and topical analysis on the economics of chocolate. While the main approach is economic analysis, there are important contributions from other disciplines, including psychology, history, government, nutrition, and geography. The chapters are organized around several themes, including the history of cocoa and chocolate -- from cocoa drinks in the Maya empire to the growing sales of Belgian chocolates in China; how governments have used cocoa and chocolate as a source of tax revenue and have regulated chocolate (and defined it by law) to protect consumers' health from fraud and industries from competition; how the poor cocoa producers in developing countries are linked through trade and multinational companies with rich consumers in industrialized countries; and how the rise of consumption in emerging markets (China, India, and Africa) is causing a major boom in global demand and prices, and a potential shortage of the world’s chocolate.

Subaltern Urbanisation in India

2017-03-01 Eric Denis This volume decentres the view of urbanisation in India from large agglomerations towards smaller urban settlements. It presents the outcomes of original research conducted over three years on subaltern processes of urbanization. The volume is organised in four sections. A first one deals with urbanisation dynamics and systems of cities with chapters on the new census towns, demographic and economic trajectories of cities and employment transformation. The interrelations of land transformation, social and cultural changes form the topic of the “land, society, belonging” section based on ethnographic work in various parts of India (Karnataka, Himachal Pradesh, Arunachal Pradesh and Tamil Nadu). A third section focuses on public policies, governance and urban services with a set of macro-analysis based papers and specific case studies. Understanding the nature of production and innovation in non-metropolitan contexts closes this volume. Finally, though focused on India, this research raises larger questions with regard to the study of urbanisation and development worldwide.

Ethnic Relations in Post-Soviet Russia

2014-10-03 Andrew Foxall While the collapse of communism in Russia was relatively peaceful, ethnic relations have been deteriorating since then. This deterioration poses a threat to the functioning of the Russian state and is a major obstacle to its future development. Analysing ethnic relations in the North Caucasus, this book demonstrates how a myriad of processes that characterised post-Soviet transition, including demographic change, economic upheaval, geopolitical instability, and political re-structuring, have affected daily life for citizens. It raises important questions about ethnicity, identity, nationalism, sovereignty, and territoriality in the post-Soviet space.

Once in a Lifetime

2014-08-31 Kevin McCloud New Zealand has to rebuild the majority of its second-largest city after a devastating series of earthquakes – a unique challenge for a developed country in the twenty-first century. The 2010-2011 earthquakes fundamentally disrupted the conventions by which the people of Christchurch lived. The exhausting and exhilarating mix of distress, uncertainty, creativity, opportunities, divergent opinions and competing priorities generates an inevitable question: how do we know if the right decisions are being made? Once in Lifetime: City-building after Disaster in Christchurch offers the first substantial critique of the Government’s recovery plan, presents alternative approaches to city-building and archives a vital and extraordinary time. It features photo and written essays from journalists, economists, designers, academics, politicians, artists, publicans and more. Once in a Lifetime presents a range of national and international perspectives on city-building and post-disaster urban recovery.

The Mystery of the Missing Diamond

It was a gloomy and tempestuous night. The downpour was falling heavily, and the breeze was roaring. In the heart of the town, there was a exhibition, where a invaluable diamond was on display. The diamond was called the African Star, and it was the largest and most stunning diamond in the world. It was guarded by a sophisticated security setup, and a group of armed guards. No one could pilfer it, or so they assumed. But someone did. Somebody managed to get around the safeguard, to elude the watchmen, to break the window, and to grab the diamond. And no one saw them, no one listened to them, no one recognized who they were. They departed from no trace, no lead, no testimony. They faded into the night, with the African Star. And the riddle of the vanished diamond began.

Fight geography exam paper 2013 pdf pdf: Engineering Economics and Cost Estimation is a crucial aspect of any engineering project. It involves present and future economic factors, making it critical to obtain reliable estimates of future costs, benefits, and other economic parameters. Engineers often deal with projects whose scale, complexity, and uncertainty call for complex approaches to planning and budgeting^[1]. Various methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates^[2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. A number of models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate typically increases as the resources allocated to developing the estimate increase.

Fight geography exam paper 2013 pdf pdf: Chapter 4 of Holt Chemistry, titled "The Periodic Table", provides a detailed look of the periodic table and its elements. The chapter begins with a dialogue on the properties of groupings and periodic groups, clarifying how the Russian chemist Mendeleev arranged elements by their weight in ascending order. It then explores the concept of valence electrons and energy levels of atoms, highlighting the role of these electrons in reactions and transformations to atomic structures and molecular structures.

The chapter moreover distinguishes between transition metals and main elements, expounding on their properties and characteristics. It also explains the idea of energy of ionization and its trends among groupings and periodic groups on the periodic table. The chapter talks about atomic and ionic, and how these can be anticipated based on an element's location on the periodic table.

Electronegativity, which calculates an element's tendency to pull a bonding pair of electrons, is another crucial subject covered in this section. The chapter concludes with a conversation on the diagonal relationship, character of metals, and point of boiling of components.

In terms of exercises, the chapter provides a range of practice questions and standardized test preparation materials to reinforce the ideas understood. These exercises cover a range of topics, from comprehending the order of constituents to studying the trends in the table of elements.

Concepts geography exam paper 2013 pdf pdf, The field of Engineering Economics and Cost Estimation is a vital aspect of any engineering project. It involves present and future economic factors, making it essential to obtain reliable estimates of future costs, benefits, and other economic parameters. Engineers often deal with projects whose scale, complexity, and uncertainty call for advanced approaches to planning and budgeting [1]. Various methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates [2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods,

capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Various models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate generally increases as the resources allocated to developing the estimate increase.
