What risks and side effects are of concern? The use of things not completely understood for the treatment of medical conditions is nothing new. Penicillin and aspirin were used for decades solely on the basis of their beneficial effects, without doctors knowing exactly how they worked. Results are what are truly important. However, it is equally important is to ensure that the technique is used safely.

Anemia in Adolescents

To understand what is anemia one should begin with breathing. The oxygen that is inhaled simply doesn't stop in lungs. It circulates though out the body and fuels the brains also. Oxygen travels to all parts of the body though bloodstream and to be precise in the RBCs I.e. red blood cells. Now, these RBCs are produced in the bone marrow of the body and they serve as boats carrying oxygen in the bloodstream. RBCs have something called hemoglobin, a protein which holds oxygen. To make adequate hemoglobin body requires iron in plenty. The iron is supplied by the foods that we take along with other nutrients. When these RBCs are fewer in number than what is needed anemia occurs in the body. There can be 3 primary reasons: RBCs are lost due to some reason, the production of RBCs is slower than what is needed and lastly the body is destroying the RBCs. Different types of anemia are linked to at least one of these causes.

tutta unaltra storia frammenti di giornalismo antico...Like other strategies used in treating health conditions, acupuncture may have some side effects. Medications have side effects and allergic reactions, surgeries have risk of infection and complications. For needle puncture, there is a risk of injury, rare infections, minor bleeding, small bruises, and some dizziness. You can minimize the possible side effects by choosing a licensed acupuncturist. Most countries either have government licensing in place or have professional organizations with very strict rules and regulations. How do treatments go? An acupuncturist will do an initial evaluation of your medical history and your body's current state. Multiple pressure points are palpated, and a regimen of treatment is formulated. Most courses involve a series of 10 to 20 treatment sessions, each lasting 30 to 90 minutes. Needles will be carefully placed at the required points and kept in place for some time. Most patients report a feeling of mild sensation at the site of the puncture, but no real pain.

The Skinny on Acupuncture Weight Loss

It has been found that weight gain is directly related to emotions. Other than physical hunger, people reach for a huge chocolate bar or a big platter of burger and fries because of the sense of comfort derived from food and eating. More often than not, excessive weight gain is an emotional issue, rather than a mere physical one. You may not realize it, but you tend to take in more food whenever you're stressed, upset, or pressured. In Acupuncture, there are specific spots on the body being targeted by the hair-like needles. These spots are linked to certain areas in the body and by stimulating these spots; the patient will achieve a greater sense of inner balance. As these points are inserted by the needles, certain hormones are released throughout the body. These substances work by helping you manage hunger and efficiently control the impulse to overeat.

Most acupuncturists will target the spots behind the ear when it comes to promoting weight loss. When these points behind the ear are stimulated, endorphins are released in large doses. Endorphins are called the feel-good hormones, and these are also often referred to as natural pain and fever relievers. The release of endorphins is what makes you feel better after an increased level of physical activity, as in the case of a good workout. These bodily compounds allow the patient to experience better relaxation, thus considerably alleviating stress. There is a greater possibility of enhanced weight loss when the patient has already achieved emotional wellness. Endorphins are also released whenever the body experiences low levels of bodily pain, thus their moniker as a natural pain reliever.

The blood pressure comprises of two measures, the systolic pressure and diastolic pressure. Systolic pressure is the larger figure and represents the pressure within the artery of the heart, when contractions take place which pump blood to different parts of the body. Diastolic pressure is the pressure within the artery of the heart, when the blood is filling in the heart and it is at rest. Both the pressures are measured in millimeters of mercury or mmHg. Acne is one of the most common problems in adolescent teens affecting nearly seventeen million people in the United States. Acne is nothing but a disorder involving sebaceous glands and hair follicles. Acne results from the clogging of sebaceous glands leading to the formation of pimples and cysts. The condition usually begins with the onset of puberty. Going by the facts, as teens attain puberty the androgens also called male sex hormones are produced in high number leading to sebaceous glands becoming over active which results in sebum being produced in high proportions.

Sebum, which is nothing but oil is produced by sebaceous glands which travel to the skin surface through hair follicles. But, skin cells block the follicles which results in oil also being blocked. When these hair follicles are blocked it results in the development of skin bacteria known as Propionibacterium Acnes within the follicles which in turn results in swelling of the skin called Acne. If the hair follicles are partially blocked it results in blackheads. If the follicles are completely blocked they result in whiteheads. But if these plugged follicles are not treated they ultimately burst causing the oil, bacteria and skin cells to spill all over the skin resulting in irritation and formation of pimples. Acne can be shallow as well as deep in various individuals depending on the nature of skin and amount of oil produced.
