Chapter four of Holt Chemistry, titled "Periodic Table", provides a detailed look of the periodic table and its constituents. The chapter begins with a dialogue on the traits of groups and periods, explaining how Russian chemist Mendeleev organized elements by their weight in increasing order¹. It then explores the concept of outer electrons and energy levels of atoms, underscoring the function of these electrons in reactions and changes to atomic structures and molecules.

The chapter further separates between transition elements and main group elements, expounding on their features and traits. It also clarifies the idea of energy of ionization and its patterns among groupings and periodic groups on the periodic table¹. The chapter discusses atomic and radii, and how these can be predicted based on an element's place on the table of elements.

Electronegativity, which measures an element's inclination to draw a bonding pair of electrons, is another crucial topic discussed in this section¹. The chapter ends with a discussion on the relationship diagonally, metallic character, and point of boiling of constituents.

In terms of practice questions, the chapter provides a range of questions for practice and standardized test preparation resources to strengthen the ideas studied. These tasks cover a range of topics, from understanding the arrangement of components to investigating the patterns in the table of elements.
