Numerical Techniques in Electromagnetics, Second Edition

2000-07-12 Matthew N.O. Sadiku As the availability of powerful computer resources has grown over the last three decades, the art of computation of electromagnetic (EM) problems has also grown - exponentially. Despite this dramatic growth, however, the EM community lacked a comprehensive text on the computational techniques used to solve EM problems. The first edition of Numerical Techniques in Electromagnetics filled that gap and became the reference of choice for thousands of engineers, researchers,

and students. The Second Edition of this bestselling text reflects the continuing increase in awareness and use of numerical techniques and incorporates advances and refinements made in recent years. Most notable among these are the improvements made to the standard algorithm for the finite difference time domain (FDTD) method and treatment of absorbing boundary conditions in FDTD, finite element, and transmission-line-matrix methods. The author also added a chapter on the method of lines. Numerical Techniques in Electromagnetics continues to teach readers how to pose, numerically

analyze, and solve EM problems, give them the ability to expand their problem-solving skills using a variety of methods, and prepare them for research in electromagnetism. Now the Second Edition goes even further toward providing a comprehensive resource that addresses all of the most useful computation methods for EM problems.

sharing stolen kisses. Their bond was indestructible, and they vowed to stay connected, to remain faithful, and to never let their love fade. But life, as it often does, had a different path in store for them. They lost track of each other, they moved on with their lives, and they eventually married other people. The diamond was called the Star of Africa, and it was the greatest and most stunning diamond in the world. It was protected by a high-tech security setup, and a group of weaponized guards. No one could steal it, or so they thought. But an individual did. An individual succeeded to get around the protection, to evade the guards, to smash the glass, and to steal the diamond. And no one observed them, no one heard them, no one recognized who they were. They departed from no mark, no hint, no evidence. They vanished into the darkness, with the African Star. And the enigma of the lost diamond commenced.
