The Theory of Problem-Solution Dualities and Polarities

2022-04-25 Kofi Kissi Dompere This book is concerned with the development of the understanding of the relational structures of information, knowledge, decision-choice processes of problems and solutions in the theory and practice regarding diversity and unity principles of knowing, science, non-science, and information-knowledge systems through dualistic-polar conditions of variety existence and nonexistence. It is a continuation of the sequence of my epistemic works on the theories on fuzzy rationality, info-statics, info-dynamics, entropy, and their relational connectivity to information, language, knowing, knowledge, cognitive practices relative to variety identification–problem–solution dualities, variety transformation–problem–solution dualities, and variety certainty–uncertainty principle in all areas of knowing and human actions regarding general social transformations. It is also an economic–theoretic approach in understanding the diversity and unity of knowing and science through neuro-decision–choice actions over the space of problem–solution dualities and polarities. The problem–solution dualities are argued to connect all areas of knowing including science and non-science, social science, and non-social-science into unity with diversities under neuro-decision–choice actions to support human existence and nonexistence over the space of static–dynamic dualities. The concepts of diversity and unity are defined and explicated to connect to the tactics and strategies of decision–choice actions over the space of problem–solution dualities. The concepts of problem and solution are defined and explicated not in the space of absoluteness but rather in the space of relativity based on real cost–benefit conditions which are shown to be connected to the general parent–offspring infinite process, where every solution generates new problem(s) which then generates a search for new solutions within the space of minimum–maximum dualities in the decision–choice space under the principle of non-satiation over the space of preference–non-preference dualities with analytical tools drawn from the fuzzy paradigm of thought which connects the conditions of the principle of opposites to the conditions of neuro-decision–choice actions in the zone of variety identifications and transformations. The Monograph would be useful to all areas of Research, Learning and Teaching at Advanced Stages of Knowing and Knowledge Production.

Language Contact and Documentation / Contacto lingüístico y documentación

2014-12-12 Bernard Comrie The volume is highly relevant to the current regional and international discussion on endangered languages, language contact, documentation and areal typology. The publication is the outcome of a fruitful theoretical and methodological exchange between Latin American scholars and international scholars working in other regions. Most of the papers target Latin American languages. Additionally, new insight into the contact situations in Indonesia, Iran, Australia and Papua New Guinea is provided.

Space and Time in Languages and Cultures

2012 Luna Filipovi? This volume offers novel insights into linguistic diversity in the domains of spatial and temporal reference, searching for uniformity amongst diversity. A number of authors discuss expression of dynamic spatial relations cross-linguistically in a vast range of typologically different languages such as Bezhta, French, Hinuq, Italian, Japanese, Polish, Serbian, and Spanish, among others. The contributions on linguistic expression of time all shed new light on pertinent questions regarding this cognitive domain, such as the hotly debated relationship between cross-linguistic differences in talking about time and universal principles of utterance interpretation, modelling temporal inference through aspectual interactions, as well as the complexity of the acquisition of tense-aspect relations in a second language. The topic of space and time in language and culture is also represented, from a different point of view, in the sister volume Space and Time in Languages and Cultures: Language, Culture, and Cognition (HCP 37) which discusses spatial and temporal constructs in human language, cognition, and culture in order to come closer to a better understanding of the interaction between shared and individual characteristics of language and culture that shape the way people interact with each other and exchange information about the spatio-temporal constructs that underlie their cognitive, social, and linguistic foundations.

The Theory of Info-Dynamics: Rational Foundations of Information-Knowledge Dynamics

2017-12-06 Kofi K. Dompere This book focuses on the development of a theory of info-dynamics to support the theory of info-statics in the general theory of information. It establishes the rational foundations of information dynamics and how these foundations relate to the general socio-natural dynamics from the primary to the derived categories in the universal existence and from the potential to the actual in the ontological space. It also shows how these foundations relate to the general socio-natural dynamics from the potential to the possible to give rise to the possibility space with possibilistic thinking; from the possible to the probable to give rise to possibility space with probabilistic thinking; and from the probable to the actual to give rise to the space of knowledge with paradigms of thought in the epistemological space. The theory is developed to explain the general dynamics through various transformations in quality-quantity space in relation to the nature of information flows at each variety transformation. The theory explains the past-present-future connectivity of the evolving information structure in a manner that illuminates the transformation problem and its solution in the never-ending information production within matter-energy space under socio-natural technologies to connect the theory of info-statics, which in turn presents explanations to the transformation problem and its solution. The theoretical framework is developed with analytical tools based on the principle of opposites, systems of actual-potential polarities, negative-positive dualities under different time-structures with the use of category theory, fuzzy paradigm of thought and game theory in the fuzzy-stochastic cost-benefit space. The rational foundations are enhanced with categorial analytics. The value of the theory of info-dynamics is demonstrated in the explanatory and prescriptive structures of the transformations of varieties and categorial varieties at each point of time and over time from parent–offspring sequences. It constitutes a general explanation of dynamics of information-knowledge production through info-processes and info-processors induced by a socio-natural infinite set of technologies in the construction–destruction space.

The Cambridge Handbook of Areal Linguistics

2017-04-20 Raymond Hickey Providing a contemporary and comprehensive look at the topical area of areal linguistics, this book looks systematically at different regions of the world whilst presenting a focussed and informed overview of the theory behind research into areal linguistics and language contact. The topicality of areal linguistics is thoroughly documented by a wealth of case studies from all major regions of the world and, with chapters from scholars with a broad spectrum of language expertise, it offers insights into the mechanisms of external language change. With no book currently like this on the market, The Cambridge Handbook of Areal Linguistics will be welcomed by students and scholars working on the history of language families, documentation and classification, and will help readers to understand the key area of areal linguistics within a broader linguistic context.

A General Theory of Entropy

2019-08-02 Kofi Kissi Dompere This book presents an epistemic framework for dealing with information-knowledge and certainty-uncertainty problems within the space of quality-quantity dualities. It bridges between theoretical concepts of entropy and entropy measurements, proposing the concept and measurement of fuzzy-stochastic entropy that is applicable to all areas of knowing under human cognitive limitations over the epistemological space. The book builds on two previous monographs by the same author concerning theories of info-statics and info-dynamics, to deal with identification and transformation problems respectively. The theoretical framework is developed by using the toolboxes such as those of the principle of opposites, systems of actual-potential polarities and negative-positive dualities, under different cost-benefit time-structures. The category theory and the fuzzy paradigm of thought, under methodological constructionism-reductionism duality, are used in the fuzzy-stochastic and cost-benefit spaces to point to directions of global application in knowing, knowledge and decision-choice actions. Thus, the book is concerned with a general theory of entropy, showing how the fuzzy paradigm of thought is developed to deal with the problems of qualitative-quantitative uncertainties over the fuzzy-stochastic space, which will be applicable to conditions of soft-hard data, fact, evidence and knowledge over the spaces of problem-solution dualities, decision-choice actions in sciences, non-sciences, engineering and planning sciences to abstract acceptable information-knowledge elements.

Mapping Linguistic Diversity in Multicultural Contexts

2008-08-27 Monica Barni Within the European context, linguistic diversity can be studied at the level of both official state languages and non-national languages. This comprehensive overview offers insightful crossnational and crosscontinental perspectives on non-national languages in terms of both regional and immigrant languages. The book focuses on mapping linguistic diversity in both the private and public domain. Methodological issues and empirical outcomes are explored for a variety of European and non-European countries and languages. The book consists of four parts. Part 1 provides an introduction to the subject, as well as an overview and discussion of

migration statistics and language use. Part 2 deals with the mapping of regional languages in Europe, exemplified by case studies on Welsh, Basque, and Frisian. Part 3 focuses on immigrant languages in Europe and includes case studies from both national (Switzerland, Italy, France) and crossnational (Multilingual Cities Project) perspectives. Part 4 turns to mapping linguistic diversity abroad with case studies on Australia, South Africa, Turkey, and Japan.

2018-12-14 Johanna Nichols In this ground-breaking book, Johanna Nichols proposes means of describing, comparing, and interpreting linguistic diversity, both genetic and structural, providing the foundations for a theory of diversity based upon population science. This book will interest linguists, archaeologists, and population specialists. "An awe-inspiring book, unequalled in scope, originality, and the range of language data considered."—Anna Siewierska, Linguistics "Fascinating. . . . A brilliant pioneering study."—Journal of Indo-European Studies "A superbly reasoned book."—John A. C. Greppin, Times Literary Supplement

"Fundamentals of Analytical Chemistry" is an comprehensive textbook penned by the esteemed authors Douglas A. Skoog, Donald M. West, F. James Holler, and Stanley R. Crouch. Renowned for its exceptional readability, the book adopts a systematic approach that meticulously guides readers through the intricacies of analytical chemistry. It offers extensive coverage of the principles and practices that underpin analytical chemistry, consistently demonstrating its practical implications throughout the text.

The tenth edition of this influential work is meticulously crafted to serve as a primary textbook for a one- or two-semester course specifically designed for chemistry majors. It seamlessly integrates numerous applications to biology, medicine, materials science, ecology, forensic science, and a myriad of other related fields, showcasing the diverse and far-reaching impact of analytical chemistry. The book is enriched with a wealth of spreadsheet applications, insightful examples, and engaging exercises that enhance the learning experience and foster deeper understanding.

The primary objective of this esteemed text is threefold. Firstly, it aims to provide a thorough grounding in the fundamental chemical principles that are particularly relevant to analytical chemistry. Secondly, it seeks to cultivate in students an appreciation for the challenges and complexities associated with evaluating the accuracy and precision of experimental data. The text demonstrates how statistical methods can be effectively applied to analytical data, thereby enhancing the reliability and validity of experimental results. Thirdly, it introduces a broad spectrum of modern and classic techniques that are instrumental in analytical chemistry, providing students with a diverse toolkit of methodologies to tackle a wide range of analytical challenges.

The book is complemented by a comprehensive student solution manual available in PDF format, offering step-by-step guidance for solving the exercises and problems presented throughout the text. It is conveniently accessible for download or online viewing, ensuring that students have the resources they need to succeed in their studies.

The latest advancements in analytical chemistry are presented using a accessible yet meticulous and rigorous approach. Each chapter commences with a captivating story and stunning visuals that pique the readers curiosity and set the stage for the concepts to be explored. New features highlight fulfilling chemistry-related careers, exposing students to the diverse and exciting professional opportunities that await them in this dynamic field. Additionally, readers are equipped with the skills and knowledge necessary to utilize Excel 2019 as a problem-solving tool in analytical chemistry, empowering them to tackle complex analytical problems with enhanced proficiency and confidence.

A term paper is a scholarly paper written by students over an academic term, accounting for a significant part of a grade. Its a vital component of your college education, often assigned towards the conclusion of a semester. The paper is a vehicle through which educators gauge your comprehension of the course content. Writing a term paper isnt just about summarizing facts. It requires a mix of organization, deep research, and the art of presenting your findings in a way thats both clear and analytical. This means structuring your arguments logically, citing relevant sources, and critically evaluating the information youve gathered. When grading a term paper, there are three important aspects to consider. First, the paper should be passionately written and captivating to read. Second, it should have good grammar and style (following MLA, APA, or CMS style). Third, it should be well documented with in-text references (in parentheses) linking their assertions to scholarly articles in the list of references at the end of the paper.
