2013-01-22 Hamed Khan OSCEs for Medical Finals has been written by doctors from a variety of specialties with extensive experience of medical education and of organising and examining OSCEs. The book and website package consists of the most common OSCE scenarios encountered in medical finals, together with checklists, similar to OSCE mark schemes, that cover all of the key learning points students need to succeed. Each topic checklist contains comprehensive exam-focussed advice on how to maximise performance together with a range of 'insider's tips' on OSCE strategy and common OSCE pitfalls. Designed to provide enough coverage for those students who want to gain as many marks as possible in their OSCEs, and not just a book which will ensure students 'scrape a pass', the book is fully supported by a companion website at www.wiley.com/go/khan/osces, containing: OSCE checklists from the book A survey of doctors and students of which OSCEs have a high chance of appearing in finals in each UK medical school

Orthopedic Problems in Adolescents

Physical health problems encountered during adolescence can affect the development of the body, if not treated. There are few anatomic regions, such as spine, knee and ankle, in adolescents which can get orthopedic problems such as Osgood-Schlatter disease, and Slipped Capital Femoral Epiphysis.

Osgood-Schlatter disease is caused due to injury or overuse of the knee which causes swelling and pain in the area below the knee, above the shin bone. The patellar tendon and the soft tissues surrounding it gets inflamed, because of the constant pulling of the area where the tendon joins the below knee. Usually, adolescents who participate in sports actively and are athletic, such as football, basketball, soccer, ballet and gymnastics, tend to get the Osgood-Schlatter disease. Boys of age eleven to fifteen and girls of age eight to thirteen are at greater risk. The reason why adolescents get this problem is that their bones grow faster when compared to the tendons and muscles in this age and because of this the muscles and tendons stretch and become tight.

Guide osce exams dental nurses pdf pdf,OCD is a sign of brain circuitry's unusual functioning and it involves the striatum part of the brain. The brain activity patterns of such people differ from normal people and people with other mental disorders. Researchers have concluded that OCD is usually a family problem and is a disorder of the brain. Streptococcal bacterial infection can create or worsen the condition of OCD. Adolescents with no family history of OCD can also develop it. Most of the adolescents feel embarrassed to talk about their OCDs. They think that people will label them as crazy and this will make them feel ashamed. This will make it difficult for the parents to talk to their children about their OCD, in order to solve them. Parents need to develop good communication skills for this purpose. Parent's support is also very important to the adolescent. Cooperation is extremely important along with treatment, because if the problem is not treated the adolescent will grow into a disturbed adult.

Most of the adolescents with OCD can receive effective treatment. The treatment can include psychotherapy and intake of medications such as fluoxetine, clomipramine, fluvoxamine, paroxetine, sertraline and other serotonin reuptake inhibitors. When OCD is caused due to streptococcal infection, the adolescent can be administered with antibiotics to kill the bacterium which is causing it. Exposure and response prevention behavioral therapy is very useful in solving OCD. In this therapy, the adolescent is wontedly exposed to his/her fears which give him/her obsessive thought. After that he/she is trained to avoid these thoughts and the rituals which he/she carries out to tackle the anxiety.

An adolescent having OCD can also have depression, substance abuse, attention deficit hyperactivity disorder, eating disorders, and other types of anxiety disorders. When a person with OCD and other mental illness, is treated, OCD becomes more difficult to treat

and even diagnose.

Discovery osce exams dental nurses pdf pdf...Common Oral Health Problems in Adolescents

Adolescents face many oral health problems which may require them to visit a dentist or any other healthcare professional. Irregular teeth growth is a common problem and adolescents with braces are a common sight. Another problem is wisdom teeth extraction or the removal of the third molar. Dental cavities are yet another common problem in adolescents.

Orthodontics is a specialty in dentistry which deals with correction, development and prevention of irregular teeth, jaw and bite.

Orthodontics also helps to correct jaw disorders and facial abnormalities. If a general dentist feels abnormalities in the adolescent, he/she will refer the patient to an orthodontist. The American Dental Association suggests that every adolescent above the age of seven should get an orthodontic evaluation done. Problems which require orthodontic treatment are crowded or crooked teeth, extra teeth, missing teeth, under-bite, overbite, jaw joint disorder, and incorrect or misaligned jaw position.

To get braces or any other orthodontic treatments, the appropriate age is ten to fourteen years. But regardless of the age, the same physical and biological process is used in correcting and moving the teeth alignments. Braces are also known as fixed orthodontic appliances. There are three types of braces used to move and reposition the teeth. The first consists of brackets which are made out of plastic or metal. They are either of tooth color or clear and are bonded onto the teeth. The second type is the lingual type of brackets which are attached to the back teeth and cannot be seen while talking. The third type is a band. It is a metal band which covers the teeth and wraps around the last ones.

Review osce exams dental nurses pdf pdf.Cholesterol in Adolescents

Parts of adolescent's body are filled with a waxy stuff identified as cholesterol. It helps to produce vitamin D, cell membranes and certain hormones. Blood cholesterol comes from two different sources, liver within the body and food. The adolescent's liver produces enough cholesterol to carry out proper functioning.

The blood acts as the carrier of cholesterol and transports it to different parts of the body. They are transported in round particle form known as lipoproteins. There are two types of lipoproteins called the low density lipoproteins or LDL and high density lipoproteins or HDL. Low density lipoprotein or LDL cholesterol is commonly known as bad cholesterol. It helps in the building up of plaque in arteries and this condition is known as atherosclerosis. The LDL level must be low in the blood and if it is high it must be decreased. Healthy weight must be maintained and exercise should be done regularly. Food items which have high contents of calories, dietary cholesterol and saturated fat must be avoided.

High density lipoprotein or HDL cholesterol is the good cholesterol. It is actually a kind of fat in blood which helps to remove bad cholesterol from the body and stops the build up of plaque in the arteries. The more the HDL cholesterol in the blood the better it is. The HDL can be raised by at least twenty minutes of exercising daily, decreasing body mass and keeping away from food with saturated fat. Some adolescents need to take medications in order to increase HDL. In such cases, increasing HDL can be a complicated procedure and the physician can make a therapeutic plan to increase HDL in the blood stream.

Learn osce exams dental nurses pdf pdf When adolescents wear braces they have to take certain precautions in order to avoid any more oral health complications. The most important precautionary measure is to brush the teeth regularly after every meal. Since the food can be easily lodged in braces, it is a good idea to brush carefully with soft bristles toothbrush and fluoride toothpaste. In the morning, the adolescent must floss between the braces and teeth. Food stuffs which are sticky or hard must be avoided as they are very difficult to remove. Foods like caramel, chew candy, popcorn, and nuts must be avoided. Cleaning must be done by the orthodontist or general dentist, every five to six months.

The wisdom teeth or third molars can grow in people of the age fifteen to twenty five. These teeth cause problem, because most of the mouths are too small to adjust new teeth and hence they need to be removed. If the wisdom tooth has place to grow, without affecting other teeth, they can be left to themselves. But if the adolescent experiences pain, facial swelling, mouth infection and gum-line swelling, then they should be extracted immediately. They can also destroy the second molars and impact other tooth. Various gum and jaw diseases can be caused. There can be a tumor development; cysts development and plaque build up. Hence, a surgery is performed to remove the tooth or teeth. The gum tissue covering the wisdom tooth is removed and the connective tissue connecting the tooth to the bone is detached. The tooth is then removed and the opening is sutured. A general dentist can perform wisdom tooth surgery in the local office using anesthesia.

Five times common than asthma is tooth cavities. The tooth above the gum line is made up of enamel, the hardest tissue within the human body. The tooth below the gum-line comprise of nerves, roots and dentin. Dentin is another type of tissue and isn't as hard as the enamel. The acid which leads to tooth decay is produced by bacteria. These acids, along with dietary sugar, attach the enamel and eat away the minerals within the enamel, until a cavity is formed. This is known as tooth cavity. The biggest prevention against dental cavities is brushing teeth twice a day and even better, after every meal with fluoride toothpaste and soft bristle toothbrush. Carbonated drinks must be avoided strictly and must be replaced with fruit juices and sugary food must be avoided. Intake of fluoridated water also helps a lot or fluoride supplements can be used as replacement.

It refers to the resulting amount after deducting the liabilities of a company from the assets. Private companies refer to net worth as owner's equity.

Why owner's equity? Well, after deducting all the liabilities, what's left basically belongs to the owner. In the case of public companies, the profit of the business is returned as dividends to shareholders. As you can see, before owner or shareholders of a company can take hold of the profits, all liabilities must be deducted first.

In traditional Chinese medicine, much of the treatments depend on an understanding of the balance in our bodies and its internal organs. The sicknesses we sometimes develop are seen to be caused by imbalances in our lifestyles and environment. Stress is also affected by this imbalance. That is why when there is something wrong with your body, you typically have less of an ability to deal with stress. You get more irritable and find it really difficult to relax.

By sticking these very thin needles past the surface of our skin, the acupuncturist stimulates nerves in our body. These nerves send signals to our brain and scientists believe that the brain then releases its natural painkillers into our system. This immediately causes a feeling of relaxation for many people.

The needles could also help your body by stimulating its circulation. With the circulation between the organs of the body improved, a lot of the body's wastes could be cleansed properly. Your organs would also receive the full benefit of the oxygen from your lungs making its way into the cells of your body without any blockages. This makes your organs much healthier and leaves you feeling much better in the long term as well.

Acne is one of the most common problems in adolescent teens affecting nearly seventeen million people in the United States. Acne is nothing but a disorder involving sebaceous glands and hair follicles. Acne results from the clogging of sebaceous glands leading to the formation of pimples and cysts. The condition usually begins with the onset of puberty. Going by the facts, as teens attain puberty the androgens also called male sex hormones are produced in high number leading to sebaceous glands becoming over active which results in sebum being produced in high proportions.

Sebum, which is nothing but oil is produced by sebaceous glands which travel to the skin surface through hair follicles. But, skin cells block the follicles which results in oil also being blocked. When these hair follicles are blocked it results in the development of skin bacteria known as Propionibacterium Acnes within the follicles which in turn results in swelling of the skin called Acne. If the hair follicles are partially blocked it results in blackheads. If the follicles are completely blocked they result in whiteheads. But if these plugged follicles are not treated they ultimately burst causing the oil, bacteria and skin cells to spill all over the skin resulting in irritation and formation of pimples. Acne can be shallow as well as deep in various individuals depending on the nature of skin and amount of oil produced.

Treatment from Acupuncture Experts

It is very essential for a patient to consult with a skilled acupuncturist. A more personalized service will be provided by an expert, as well as added counseling for the patient. Moreover, an acupuncturist may prescribe herbal supplements to aid the patient in quitting efforts.

During treatment, filiform needles are inserted into specific points on the ear cartilage, as well as the hands and wrists. Normal procedures last for about 30 minutes. Body acupuncture can be used in combination with the ear and wrist needle placements. An acupuncturist may also utilize a mild electric current, to enhance the effect of the needles through the body.

Nicotine is the addictive and toxic substance present in a cigarette. This is the same substance that makes quitting a big challenge for most smokers. The nicotine that you get from smoking will attach itself to the pleasure areas in the brain, making it hard for you to stop. Without a steady stream of this substance, a smoker will tend to feel depressed and uncomfortable.

People who have undergone acupuncture treatment reported that they no longer find cigarettes as tempting or as satisfying.

Oftentimes, smoking would leave an awful taste in their mouths prompting them to stop their habit for once. Some patients would even resort to eating mints or lozenges to clear to get rid of the terrible aftertaste.

According to skilled practitioners, approximately 7 out of 10 smokers will successfully extricate themselves from their smoking habit after 2 or 3 weeks. While the others are unable to quit totally, these smokers will be able to cut down on their cigarette consumption quite significantly.
