Evaluating Learning Environments

2016-09-27 Wesley Imms The recent trend in innovative school design has provided exciting places to both learn and teach. New generation learning environments have encouraged educators to unleash responsive pedagogies previously hindered by traditional classrooms, and has allowed students to engage in a variety of learning experiences well beyond the traditional 'chalk and talk' common in many schools. These spaces have made cross-disciplinary instruction, collaborative learning, individualised curriculum, ubiquitous technologies, and specialised equipment more accessible than ever before. The quality of occupation of such spaces has also been encouraging. Many learning spaces now resemble places of collegiality, intellectual intrigue and comfort, as opposed to the restrictive and monotonous classrooms many of us experienced in years past. These successes, however, have generated a very real problem. Do these new generation learning environments actually work – and if so, in what ways? Are they leading to the sorts of improved experiences and learning outcomes for students they promise? This book describes strategies for assessing what is actually working. Drawing on the best thinking from our best minds – doctoral students tackling the challenge of isolating space as a variable within the phenomenon of contemporary schooling – Evaluating Learning Environments draws together thirteen approaches to learning environment evaluation that capture the latest thinking in terms of emerging issues, methods and knowledge.

comprehensive resource for making products, facilities, processes, and operations safe for workers, users, and the public Ensuring the health and safety of individuals in the workplace is vital on an interpersonal level but is also crucial to limiting the liability of companies in the event of an onsite injury. The Bureau of Labor Statistics reported over 4,700 fatal work injuries in the United States in 2020, most frequently in transportation-related incidents. The same year, approximately 2.7 million workplace injuries and illnesses were reported by private industry employers. According to the National Safety Council, the cost in lost wages, productivity, medical and administrative costs is close to 1.2 trillion dollars in the US alone. It is imperative—by law and ethics—for engineers and safety and health professionals to drive down these statistics by creating a safe workplace and safe products, as well as maintaining a safe environment. Safety and Health for Engineers is considered the gold standard for engineers in all specialties, teaching an understanding of many components necessary to achieve safe workplaces, products, facilities, and methods to secure safety for workers, users, and the public. Each chapter offers information relevant to help safety professionals and engineers in the achievement of the first canon of professional ethics: to protect the health, safety, and welfare of the public. The textbook examines the fundamentals of safety, legal aspects, hazard recognition and control, the human element, and techniques to manage safety decisions. In doing so, it covers the primary safety essentials necessary for certification examinations for practitioners. Readers of the fourth edition of Safety and Health for Engineers readers will also find: Updates to all chapters, informed by research and references gathered since the last publication The most up-to-date information on current policy, certifications, regulations, agency standards, and the impact of new technologies, such as wearable technology, automation in transportation, and artificial intelligence New international information, including U.S. and foreign standards agencies, professional societies, and other organizations worldwide Expanded sections with real-world applications, exercises, and 164 case studies An extensive list of references to help readers find more detail on chapter contents A solution manual available to qualified instructors Safety and Health for Engineers is an ideal textbook for courses in safety engineering around the world in undergraduate or graduate studies, or in professional development learning. *Life Lessons from press tool design guidelines pdf pdf...*The imbalance in the Qi may go one way or the other because of Yin and Yang. The person can only be normal if there is harmony between the two which is what acupuncture is trying to achieve. This can only be restored by stimulating these acupuncture points so your Qi can be adjusted, balanced and harmonized.

Apart from using needles, practitioners also use friction, heat, impulses of electromagnetic energy and pressure to stimulate these points in order to balance the movement of energy in the body to reduce one's health.

An example of this is sonopuncture where an ultrasound device that transmits sound waves is applied to these points in the body. Some use a tuning fork and other vibration devices.

Study case press tool design guidelines pdf pdf

The earliest account of this is found in the book called Nei Jing which in English means the Yellow Emperor's Classic of Internal Medicine. The contents of this book date somewhere around 200 BC. Back then, they did not use metal needles and instead used those made out of stone, moxibustion and herbs to treat a patient.

Acupuncture prevents and treats diseases by inserting very fine needles into the skin specifically at the anatomic points of the body.

The principle behind this concept is that illnesses occur because there is an imbalance in your life force otherwise known as Qi. It is believed that this flows in 14 channels in the human body known as meridians which branch out to bodily organs and functions. If there is a blockage or obstruction in any of them, this is when you succumb to a disease or an illness.

Acupressure is another example and here, the fingers are used to relive the pain. This can be used by itself or with other manual healing techniques.

Impulses of electromagnetic energy are used because our bodies generate tiny but electrical discharges which influence the function, growth and maturity of certain types of cells. By inserting the needles in these areas, it stimulates and alters the neurotransmitters in the body thus making the patient feel better after treatment. This is also sometimes used for diagnosis and testing.

According to the World Health Organization or WHO, here is a list of some illnesses where acupuncture is used. These include acute bronchitis, the common cold, cataract, toothaches, gingivitis, hiccups, ulcers, constipation, diarrhea, headache and migraine, Meniere's disease, osteoarthritis and a lot more. In the US, acupuncture is often used to treat chronic pain conditions and mind body disorders.

When looking for an acupuncturist, make sure that person is licensed. Before he or she can obtain one, they have to complete 4 years of training at an approved college of oriental medicine. In the state of California, one governing body that gives the person the title is the California Acupuncture Committee.

If they get this from another organization, a copy of their license must always be clearly displayed in the practitioner's office. One example is the National Certification Commission for Acupuncture and Oriental Medicine.

When choosing an acupuncturist, there are a few things you should ask aside from their credentials. You should know what styles of acupuncture is used as there are some techniques that do not use needles to treat a patient.

Seventy four percent of females above fourteen years and sixty percent of females below fifteen years have reported to have involuntary sex. Fifty percent of the adolescent pregnancies are within the time period of six months after the initial sexual intercourse. More than nine hundred thousand teenagers are reported to have become pregnant every year in the United States. Fifty one percent of the adolescent pregnancies result in live birth, thirty five percent result in induced abortion and fourteen percent result in stillbirths or miscarriages. Four out of ten adolescent females get pregnant, before they turn twenty, at least once. Twenty five percent of adolescent deliveries aren't the mother's first child. When a teenager gives birth to her first child, she increases the risk of begetting another child. One third of the adolescent parents are themselves result of adolescent pregnancies.

There are many reasons why adolescents choose to become sexually active at an early stage in life. The reasons can be early pubertal development, poverty, sexual abuse in childhood, lack of parent's attention, lack of career goals, family and cultural patterns of early sex, substance abuse, dropping out from school and poor school performance. Factors which discourage an adolescent to become sexually active are stable family environment, parental supervision, good family income, regular prayers, connectedness with parents and living with complete family and both the parents. The factors which are responsible for the consistent use of contraceptive among adolescents are academic success, anticipation for successful future, and involvement in a stable relationship.

There are many medical risks associated with adolescent pregnancies. Adolescents who are less than seventeen years are at a greater risk of developing medical complications, when compared to adult females. The risk is even more in teenagers below seventeen. The weight of the child, given birth by an adolescent, is very low in these pregnancies. It is usually below 2.5 kilogram. The rate of neonatal birth is also three times greater in adolescents, when compared to adults. Other problems caused by adolescent pregnancies are prematurity of the child, birth of underweight child, poor maternal weight gain, poor nutritional status, anemia, STDs and hypertension induced due to pregnancy.

This can result due to many reasons including person having disorders like sphenocytosis or sickle cell anemia. In some cases the immune system of the body may itself destroy the RBCs. Physical health problems encountered during adolescence can affect the development of the body, if not treated. There are few anatomic regions, such as spine, knee and ankle, in adolescents which can get orthopedic problems such as Osgood-Schlatter disease, and Slipped Capital Femoral Epiphysis.

Osgood-Schlatter disease is caused due to injury or overuse of the knee which causes swelling and pain in the area below the knee, above the shin bone. The patellar tendon and the soft tissues surrounding it gets inflamed, because of the constant pulling of the area where the tendon joins the below knee. Usually, adolescents who participate in sports actively and are athletic, such as football, basketball, soccer, ballet and gymnastics, tend to get the Osgood-Schlatter disease. Boys of age eleven to fifteen and girls of age eight to thirteen are at greater risk. The reason why adolescents get this problem is that their bones grow faster when compared to the tendons and muscles in this age and because of this the muscles and tendons stretch and become tight.

Variations of Conventional Acupuncture

Auriculotherapy or ear acupuncture is one of the variations of conventional acupuncture. In this practice, it is believed that the ear provides a map for all the major bodily organs. A specific area or point on the ear corresponds to a particular organ, such as the heart, kidneys, or liver. Thus, the needles are placed in particular points around the ear and on the ear cartilage.

Staple puncture is a method used in smoking cessation, wherein staples are placed for a certain period anywhere on the ear area to provide stimulation.

Indeed there is growing evidence that this traditional Oriental practice can rival any modern forms of treatment. If you are one of the many people who are looking for a widely recognized and time honored therapeutic practice, acupuncture may just be the alternative treatment for you.

Seven out of 10 of the respondents were able to kick the habit after 5 or 6 sessions. Because the number of test subjects is small, there are some who doubt the effectiveness of acupuncture. Every single thing in the universe is believed to contain both yin and yang for harmony.

When the yin and yang are not balanced, chi cannot stream through the body liberally. Therefore, the meridian points through which chi courses through need to be stimulated. This is done by the insertion of hair-thin, disposable needles in specific areas on a person's body to induce bodily harmony and bring about healing.
