Clearly organized around three parts, the text introduces the main theories and methodologies used in the discipline. Part 1 frames the comparative approach within the methodological framework of the political and social sciences. Part 2

introduces basic descriptive and inferential statistical methods as well as more advanced multivariate methods used in quantitative political analysis. Part 3 applies the methods and techniques of Parts 1 & 2 to research questions drawn from contemporary themes and issues in political science. Incorporating practice exercises, ideas for further reading and summary questions throughout, *Doing Research in Political Science* provides an invaluable step-by-step guide for students and researchers in political science, comparative politics and empirical political analysis.

Political Science Research Methods, 6th Edition

2007-12-19 H T Reynolds Don't let an introduction to research methods be your students' least favorite (and most intimidating) political science course. Relevant, timely, insightful, comprehensive, and always mindful of their student audience, the authors have revamped their popular text so that the sixth edition is friendlier and more intuitive than ever-the perfect gateway to understanding not just the "how" but also the "why" behind research into politics. Covering the discipline's major methods, the authors lead students step-by-step through the logic of research design. "Building block" chapters on hypothesis formation and testing, variables, and measurement are right up front; the introduction to research design, sampling, and literature reviews now come with more explanation as to why a researcher would pursue different kinds of methods; the stats

chapters begin with a common-sense primer that walks students through foundational ideas and practices. Throughout the text, updated examples of contemporary research problems keep readers engaged. Each chapter has bolded key terms that are also listed in a glossary at the end of each chapter and the end of the text.

"Helpful hints" feature boxes give students nuts-and-bolts reminders they can refer to when they conduct their own research or assess the work of others. NEW TO THIS EDITION New examples of political science research in Chapter 1, including a case on judicial decision making and current research into public opinion on the war in Iraq. Expanded discussion of theory in Chapter 2, showing how competing paradigms can be applied to the same topic of study. Substantially updated discussion of survey research including coverage of Internet polling and a fuller description of interviewing.

Computational formulas and calculations are now featured in "How It's Done" boxes allowing

students to separate lengthy calculations from substantive discussion of the meaning or interpretation of statistical results. Greater coverage of newer developments in applied statistics, including exploratory data analysis and descriptive and inferential statistics for counts and functions of counts. In general, less emphasis on computation, and more on interpretation. Reorganized statistics chapters for better comprehension with regression analysis and logistic regression in their own chapters. A new overview of statistical analysis, including discussion of data preparation, description, modeling, inference, interpretation, and the communication of results.

Understanding Political Science Research Methods

2013-12-04 Maryann Barakso This text starts by explaining the fundamental goal of good political science research—the ability to answer interesting and important questions by

generating valid inferences about political phenomena. Before the text even discusses the process of developing a research question, the authors introduce the reader to what it means to make an inference and the different challenges that social scientists face when confronting this task. Only with this ultimate goal in mind will students be able to ask appropriate questions, conduct fruitful literature reviews, select and execute the proper research design, and critically evaluate the work of others. The authors' primary goal is to teach students to critically evaluate their own research designs and others' and analyze the extent to which they overcome the classic challenges to making inference: internal and external validity concerns, omitted variable bias, endogeneity, measurement, sampling, and case selection errors, and poor research questions or theory. As such, students will not only be better able to conduct political science research, but they will also be more savvy consumers of the constant

flow of causal assertions that they confront in scholarship, in the media, and in conversations with others. Three themes run through Barakso, Sabet, and Schaffner's text: minimizing classic research problems to making valid inferences, effective presentation of research results, and the nonlinear nature of the research process. Throughout their academic years and later in their professional careers, students will need to effectively convey various bits of information. Presentation skills gleaned from this text will benefit students for a lifetime, whether they continue in academia or in a professional career. Several distinctive features make this book noteworthy: A common set of examples threaded throughout the text give students a common ground across chapters and expose them to a broad range of subfields in the discipline. Box features throughout the book illustrate the nonlinear, "non-textbook" reality of research, demonstrate the often false inferences and poor social science in the way the popular press

covers politics, and encourage students to think about ethical issues at various stages of the research process.

It was a gloomy and turbulent night. The downpour was pouring down, and the breeze was howling. In the heart of the city, there was a gallery, where a precious diamond was on exhibit. The diamond was known as the African Star, and it was the greatest and most stunning diamond in the world. It was protected by a high-tech security mechanism, and a team of equipped guards. No one could steal it, or so they believed. But someone did. Somebody managed to get around the safeguard, to avoid the guards, to smash the window, and to grab the diamond. And no one noticed them, no one overheard them, no one identified who they were. They left no mark, no clue, no testimony. They faded into the darkness, with the Star of Africa.
