Transnational Higher Education in Computing Courses 2019-09-24 Jenny Carter There has been exponential growth in transnational education (TNE) in the last few years as UK universities have looked to expand their markets. Recipient countries have sought short cuts to developing their higher education provision which has proved a lucrative income stream for some universities. But overseas collaborations are not without risk. Recipient countries can be concerned with external influence over curricula, quality being diluted and higher education being infected by neo-imperialism. These concerns are not without foundation. There are risks for providers too. Reputations can be damaged if academic standards are compromised. Conflicts of interest can occur between quality of provision and the pot of gold on offer. Staff can view overseas collaborations as distracting from their research and commitment to home students. Computing is a particularly popular subject for TNE, but critical thinking, analysis, independent learning, and creativity can be compromised. Preventing plagiarism is difficult. Constant changes in technology result in constant curricula revision which causes severe problems for overseas collaborations. This book focuses on TNE in the computing domain. However cross-cultural issues challenge TNE management and administration whatever the subject area. If the ever present tensions are not continuously monitored they can quickly threaten the sustainability of the collaboration. This book identifies many of the threats and some of the solutions. The readership for this book is truly global. Any international development officer in higher education considering an overseas collaboration will benefit from this book. Any academic becoming engaged in, or already involved with a TNE partnership, either as provider or recipient, will gain information and insight into the practice and issues. Researchers in TNE will discover more lines of enquiry. Students considering a course with an overseas provider or in coming to the UK to study will be better prepared thereby enabling a more fulfilling and rewarding experience. Anyone who has an interest in TNE, whether at the senior executive level, operational level, delivering programmes or as a recipient of TNE should read this book. The wealth of experience gathered here will provoke questions, prompt debate and offer solutions. It has been written by people who know the issues, bear the scars and are happy to share their knowledge. It will greatly benefit future transnational collaborations.

Japanese Management in Change 2014-09-18 Norio Kambayashi Following the burst of the "economic bubble" in the 1990s, many Japanese companies were required to reform their management systems. Changes in corporate governance were widely discussed during that decade in studies on "Japanese management." These discussions have resulted in little progress, however, since Americanization became

the dominant discourse concerning governance and the management system. There have been few studies conducted from an academic point of view on the internal aspects of organizations that practice traditional Japanese management theory. This book examines how, and the degree to which, the development of market principles accompanying the advances of globalization has affected the traditional Japanese system. It focuses on four aspects of corporate management: management institutions, strategy, organization, and human resource management. The aggregation of the new management system in Japanese companies is regarded as a distinctive Japanese-style system of management. With emphasis on these four aspects, research was conducted on the basic structure of that system, following changes in the market, technology, and society. Further, specific functions of the basic structure of the Japanese-style management system were studied. Those findings are included here, along with a discussion and analysis of the direction of future changes.

Open Source Software Policy Options for NASA Earth and Space Sciences 2019-01-27 National Academies of Sciences, Engineering, and Medicine Modern science is ever more driven by computations and simulations. In particular, the state of the art in space and Earth science often arises from complex simulations of climate, space weather, and astronomical phenomena. At the same time, scientific work requires data processing, presentation, and analysis through broadly available proprietary and community software.<sup>1</sup> Implicitly or explicitly, software is central to science. Scientific discovery, understanding, validation, and interpretation are all enhanced by access to the source code of the software used by scientists. This report investigates and recommends options for NASA's Science Mission Directorate (SMD) as it considers how to establish a policy regarding open source software to complement its existing policy on open data. In particular, the report reviews existing data and software policies and the lessons learned from the implementation of those policies, summarizes community perspectives, and presents policy options and recommendations for implementing an open source software policy for NASA SMD.

User-Developer Cooperation in Software Development 2012-12-06 Eamonn O'Neill The topic of the research reported here is direct user participation in the task-based development of interactive software systems. Building usable software demands understanding and supporting users and their tasks. Users are a primary source of usability requirements and knowledge, since users can be expected to have intimate and extensive knowledge of themselves, their tasks and their working environment. Task analysis approaches to software development encourage a focus on supporting users and their tasks while participatory design approaches encourage users' direct, active contributions to software development work. However, participatory design approaches often concentrate their efforts on design activities rather than on wider system development activities, while task analysis approaches generally lack active user participation beyond initial data gathering. This research attempts an integration of the strengths of task analysis and user participation within an overall software development process. This work also presents detailed empirical and theoretical analyses of what it is for users and developers to cooperate, of the nature of user-developer interaction in participatory settings. Furthermore, it makes operational and assesses the effectiveness of user participation in development and the impact of user-developer cooperation on the resulting software product. The research addressed these issues through the development and application of an approach to task based participatory development in two real world development projects. In this integrated approach, the respective strengths of task analysis and participatory design methods complemented each other's weaker aspects.

Geographic Citizen Science Design 2021-02-04 Artemis Skarlatidou Little did Isaac Newton, Charles Darwin and other 'gentlemen scientists' know, when they were making their scientific discoveries, that some centuries later they would inspire a new field of scientific practice and innovation, called citizen science. The current growth and availability of citizen science projects and relevant applications to support citizen involvement is massive; every citizen has an opportunity to become a scientist and contribute to a scientific discipline, without having any professional qualifications. With geographic interfaces being the common approach to support collection, analysis and dissemination of data contributed by participants, 'geographic citizen science' is being approached from different angles. Geographic Citizen Science Design takes an anthropological and Human-Computer Interaction (HCI) stance to provide the theoretical and methodological foundations to support the design, development and evaluation of citizen science projects and their user-friendly applications. Through a careful selection of case studies in the urban and non-urban contexts of the Global North and South, the chapters provide insights into the design and interaction barriers, as well as on the lessons learned from the engagement of a diverse set of participants; for example, literate and non-literate people with a range of technical skills, and with different cultural backgrounds. Looking at the field through the lenses of specific case studies, the book captures the current state of the art in research and development of geographic citizen science and provides critical insight to inform technological innovation and future research in this area.

Architectural Design and CAD 2012-12-06 Yvon Gardan In any business, the essential element for the successful use of data processing is training. This represents the largest expense both at start-up and as CAD impacts design office procedures other than drafting. Training is also the most difficult cost item to quantify. Even more than the equipment, training - or retraining in the case of professionals in practice - is the key to increased productivity. Recommendations for specific programs of training are beyond the scope of this paper. Once staff has been retrained to work at higher levels of productivity with data processing equipment, they are more valuable. They will be more difficult to replace. Their new capabilities represent a significant investment in modernization, both to the individual design office and to the design profession as a whole. There is a shortage of qualified people with both professional and computer skills. Competition among

employers for people with these skills already exists and will probably continue into the foreseeable future. At the outset of training, an employment agreement is worth considering for the well-being of all parties.

Nelson Mandela stands as one of the most transformative leaders of the 20th century. His life journey began on July 18, 1918, in the tranquil village of Mvezo, South Africa. Born into the Thembu royal family, he was bestowed with the name Rolihlahla, meaning "troublemaker" in Xhosa. Mandelas upbringing unfolded amidst a backdrop of racial inequality, where he witnessed firsthand the unfair practices inflicted upon the Black majority by the ruling white minority government. Driven by a deep sense of equality, he dedicated his life to the struggle for emancipation and equality, joining the African National Congress (ANC), a political organization dedicated to dismantling apartheid, the system of racial segregation that plagued South Africa. Emerging as a charismatic lawyer, activist, and leader, Mandela faced numerous arrests and imprisonments for his unwavering resistance and defiance. For 27 years, he endured the harsh conditions and isolation of Robben Island, a notorious prison island, where his vision never wavered. His unwavering commitment to freedom continued to inspire and mobilize his people and the world at large. In 1990, he walked out of prison, free at last, and in 1994, he made history as South Africas first democratically elected Black president. Mandelas leadership ushered in a period of reconciliation, transforming South Africa into a nation of fairness. His global impact extended far beyond South Africas borders, as he became a beacon of peace, recognized for his unwavering dedication to these ideals. In 1993, he was awarded the Nobel Peace Prize, alongside numerous other accolades and honors. On December 5, 2013, at the age of 95, Mandela passed away, leaving behind a legacy of strength, wisdom, and kindness. Revered as the father of the nation and one of historys greatest heroes, Mandelas legacy continues to inspire generations to come.
