Bowles, MSN, EdD, RN, CNE 2015-04-08 Praise for the first edition: "This is an excellent teaching guide and resource manual for instructors, gerontological nursing students, and practicing nurses and social workers who wish to learn more about geriatric concerns and care. It will be kept by nursing students long after they graduate as a guide to resources that will be valuable throughout their nursing careers. As a home care nurse working mainly with the geriatric community, I found the resources helpful in my practice. As an instructor, I found the book to be a very useful guide for teaching geriatrics." Score: 90, 4 Stars –Doody's Medical Reviews "[This] is a unique volume that effectively addresses the lack of gerontology case studies for use with undergraduate nursing students. Case studies are a pedagogically powerful approach to active learning that offer opportunities to apply content to clinical practice." –The Gerontologist "The case narrative approach of this book promotes active learning that is more meaningful to students (and practicing nurses) and more likely to increase the transfer of evidence into practice. An excellent resource for faculty (staff educators) to facilitate critical learning skills." –Liz Capezuti, PhD, RN, FAAN Dr. John W. Rowe Professor in Successful Aging Co-Director, Hartford Institute for Geriatric Nursing New York University College of Nursing Vivid case examples help guide nurses in developing appropriate interventions that include complementary and alternative health therapies and provide a basis for evaluating outcomes. Exercises interspersed throughout each case study include numerous open-ended and multiple-choice questions to facilitate learning and critical thinking. The text is unique in that some of the presented cases focus on psychosocial issues such as gambling addiction, hoarding behavior, emergency preparedness, and long-distance caregiving. Cases also depict geriatric clients who are living healthy, productive lives to counter myths and negative attitudes about older adults. Scenarios demonstrating ethical dilemmas prepare students to appropriately respond to "gray area" situations. The text is geared for AACN and NLN accreditation and is organized according to the needs of actual clinical settings. With cases that take place in the home and community or within primary, acute, and long-term care facilities, this book will be useful for courses specific to gerontology nursing or across any nursing curriculum. Self-Care Science, Nursing Theory and Evidence-Based Practice Katherine Renpenning, MScN 2011-05-20 "This is an excellent review of the development of self-care deficit theory and the use of self-care in nursing practice. Explanations of the various theories and theory terms are well done and written at a level that novice theorists can relate to. The authors demonstrate how self-care science can be fiscally and effectively applied to the care of patients/clients." -Doody's Medical Reviews Dorothea Orem's Self-Care Theory has been used as a foundation for nursing practice in healthcare institutions and as the basis of curricula in nursing schools for decades. This book explores the high-level theory of the application of Orem's Self-Care Theory, and how it can improve patient outcomes as well as cost-effectiveness of nursing care delivery. Written for nursing theorists, researchers, administrators, and graduate students, the text addresses the relationship of self-care theory and evidence-based care in nursing, and provides a solution to improving contemporary healthcare outcomes. The book is divided into three sections. Section one discusses the reason for the existence of the nursing profession, and identifies the performance of self-care. Section two

covers three nursing practice sciences-wholly compensatory nursing, partly compensatory nursing, and supportive educative nursing. Section three offer suggestions on how health care organizations can incorporate this broadened perspective of what constitutes evidence based practice and on-going research methodology into every-day delivery of nursing services. Key Features: Includes case examples to illustrate the application of theory to nursing practice Provides a current, cost-effective resource for implementing Orem's Self-Care Deficit Theory for effective evidence-based practice Builds the link between the application of Orem's Self Care Theory and improved patient and fiscal healthcare outcomes

Facing Mount Kenya Jomo Kenyatta 1978-12-29 Facing Mount Kenya, first published in 1938, is a monograph on the life and customs of the Gikuyu people of central Kenya prior to their contact with Europeans. It is unique in anthropological literature for it gives an account of the social institutions and religious rites of an African people, permeated by the emotions that give to customs and observances their meaning. It is characterised by both insight and a tinge of romanticism. The author, proud of his African blood and ways of thought, takes the reader through a thorough and clear picture of Gikuyu life and customs, painting an almost utopian picture of their social norms and the sophisticated codes by which all aspects of the society were governed. This book is one of a kind, capturing and documenting traditions fast disappearing. It is therefore a must-read for all who want to learn about African culture.

Digital Anatomy Jean-François Uhl 2021-05-14 This book offers readers fresh insights on applying Extended Reality to Digital Anatomy, a novel emerging discipline. Indeed, the way professors teach anatomy in classrooms is changing rapidly as novel technology-based approaches become ever more accessible. Recent studies show that Virtual (VR), Augmented (AR), and Mixed-Reality (MR) can improve both retention and learning outcomes. Readers will find relevant tutorials about three-dimensional reconstruction techniques to perform virtual dissections. Several chapters serve as practical manuals for students and trainers in anatomy to refresh or develop their Digital Anatomy skills. We developed this book as a

support tool for collaborative efforts around Digital Anatomy, especially in distance learning, international and interdisciplinary contexts. We aim to leverage source material in this book to support new Digital Anatomy courses and syllabi in interdepartmental, interdisciplinary collaborations. *Digital Anatomy – Applications of Virtual, Mixed and Augmented Reality* provides a valuable tool to foster cross-disciplinary dialogues between anatomists, surgeons, radiologists, clinicians, computer scientists, course designers, and industry practitioners. It is the result of a multidisciplinary exercise and will undoubtedly catalyze new specialties and collaborative Master and Doctoral level courses world-wide. Nursing Case Studies in Caring Kristen Lawton Barry, PhD 2015-06-04 Uncovers the art and science of nursing grounded in caring for all nursing situations Grounded in the belief that caring is the central domain of nursing, this innovative book presents a new approach to "nursing situations." These are case studies depicting shared lived experiences between the nurse and patient that are studied from various theoretical perspectives. They are designed to foster a nursing student's ability to care effectively for a patient, family, or group. Each case study features a compelling scenario that engages the reader to feel and fully participate in the caring experience. The book presents a variety of situations that new and experienced nurses are likely to encounter, many of which present scenarios that require caring for a patient under difficult or complex circumstances. The book addresses the need, as defined by leading health care and nursing education organizations, for the study of nursing from a contextual, story-oriented perspective. It is based on the Barry, Gordon & King Teaching/Learning Nursing Framework, developed as a guide to uncover the art and science of nursing grounded in caring in all nursing situations. Following a description of the framework's foundational concepts, the text describes how to use nursing situations to facilitate learning. The scenarios offer detailed, practical strategies for analyzing nursing situations in ways that bring to life the simple and complex practice of nursing grounded in caring. These real-life stories also help students understand the impact of health conditions on individuals and families, thereby fostering empathy. Case studies address nursing

situations across a variety of populations, health concerns, and practice settings. Using multiple ways of knowing and understanding, each scenario concludes with direct and reflective questions that help students develop nursing knowledge and skills. The book serves as a core resource for nurse educators and students at all levels seeking to study the art and science of nursing grounded in caring. Additionally, the book is a resource for in-service educators in health care systems that specifically address caring as an essential value for practice.
