Crossing the Quality Chasm Institute of Medicine 2001-08-19 Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators, purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment

and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

Chinese Migration to Europe Graeme

Johanson 2015-05-26 Through an

analysis of Chinese migration to

Europe, this volume examines the most

pressing migration and integration

issues facing many societies today, from the political and policy-based challenges of managing increasingly diverse communities, to individual lived experiences of identity and belonging. In addition to chapters on the UK, France and Italy, the book spotlights one of the most extraordinary examples of Chinese migration to Europe: that provided by the city of Prato, just 20km from Florence in Tuscany, Italy. Renowned for its historic textile industry, Prato is now home to one of the largest populations of Chinese residents in Europe, a phenomenon that is remarkable not only for its magnitude but also for the speed with which it has developed. This edited collection, which brings together twenty-seven separate contributors, deepens our understanding of the case of Prato within the context of Chinese migration to the new Europe.

Restorative Gardens Nancy Gerlach-Spriggs 1998-01-01 Restorative gardens for the sick, which were a vital part of the healing process from the Middle Ages to the early twentieth century, provided ordered and beautiful settings in which patients could begin to heal, both physically and mentally. In this engaging book, a landscape architect, a physician, and a historian examine the history and role of restorative gardens to show why it is important to again integrate nature into the institutional--and largely factorylike--settings of modern health care facilities. In this unique book, Nancy Gerlach-Spriggs, Dr. Richard Enoch Kaufman, and Sam Bass Warner, Jr., unfold their argument by presenting the history of restorative gardens and studies of six American health care centers that cherish the role of their gardens in the therapeutic process. These institutions are examined in detail: community hospitals in Wausau,

Wisconsin, and Monterey, California; a full-care mental institution in Philadelphia; a nursing home in Queens; a facility for rehabilitative medicine in New York City; and a hospice in Houston. In their comprehensive review the authors suggest that contemporary scientific understanding clearly recognizes the beneficial physiological effects of garden environments on patients' well-being. The book ends with a plea to make gardens--rather than the shopping mall atria so often seen in newly renovated hospitals--a vital part of the medical milieu.

Collezioni fotografiche. La conservazione preventiva Donatella Matè 2022-12-19 Le collezioni fotografiche, per via della loro natura stratigrafica altamente composita e complessa, sono tra i beni più vulnerabili al deterioramento indotto dall'ambiente di conservazione. A partire dall'ultimo decennio del Novecento, il diffuso e crescente interesse per la fotografia come bene da salvaguardare ha portato a una rapida evoluzione della disciplina della conservazione preventiva dei materiali fotografici, disciplina che si è fatta rapidamente strada nel vasto panorama delle attività conservative (preventive e di intervento), rispetto a quelle meno recenti e ben consolidate riguardanti altri beni storicamente inseriti nel patrimonio culturale. Il presente volume offre una panoramica sullo stato dell'arte del tema della conservazione preventiva dei materiali fotografici, proponendo una rassegna articolata di studi recenti, metodi e strategie sull'argomento. La trattazione mostra l'evoluzione della pratica conservativa nelle varie tematiche di cui si compone, mettendo in risalto il ruolo della conservazione preventiva e le numerose attenzioni richieste dalle collezioni fotografiche. Gli argomenti sono illustrati ampiamente per agevolare tutti i professionisti che hanno il compito impegnativo di tutelare i beni fotografici all'interno di enti e istituzioni culturali. Questo volume vuole costituire, inoltre, un supporto per i numerosi collezionisti e appassionati di fotografia che intendono avvicinarsi alla pratica della conservazione preventiva. L'opera è stata realizzata con il contributo di numerosi Autori, specialisti impegnati da tempo nello

studio e nella ricerca per la conservazione dei beni culturali. Il taglio è volutamente multidisciplinare, affrontando le tematiche specifiche dello studio del microclima, delle problematiche del biodeterioramento e delle tecniche di gestione del rischio. Numerosi approfondimenti sono dedicati, infine, all'evoluzione della pratica conservativa, all'analisi della qualità dell'aria indoor e dell'impatto della situazione emergenziale (dovuta alla pandemia) su archivi, biblioteche e musei.

Spazi urbani sicuri: Strategie e azioni per un approccio integrato alla qualità insediativa Autori **Francesca Coppola** Francesca Coppola 2021 [Italiano]: Uno dei principali requisiti per il buon funzionamento delle città, e per la loro sostenibilità, è che esse siano dotate di strade e spazi pubblici sicuri. Tale circostanza è ribadita dagli obiettivi di sviluppo sostenibile dell'Agenda 2030, in particolare dal Goal 11 con il quale si promuove la creazione di città sicure, oltre che inclusive, resilienti e sostenibili. La sicurezza in città è ostacolata quotidianamente dal verificarsi di reati predatori o episodi di inciviltà che condizionano la percezione di insicurezza innalzando la paura. La crescente domanda di sicurezza avanzata dai cittadini impone un cambio di prospettiva rispetto agli approcci sino ad ora adottati per far fronte a tale problematica. L'obiettivo di rendere la città più sicura non può essere perseguito esclusivamente con azioni di controllo o di tipo repressivo o con sporadici e generalizzati interventi di matrice sociale. È necessario affrontare la problematica in una prospettiva multidisciplinare e multilivello, seguendo un approccio integrato che inglobi in sé

considerazioni, competenze, strategie ed azioni di natura urbanistica, architettonica, sociologica, criminologica, giuridica e politica. Alla luce di quanto osservato, la raccolta si configura come occasione per riflettere, in maniera più attenta, su una tematica di particolare complessità, integrando saperi e punti di vista differenti che possano guidare l'urbanistica verso la predisposizione di azioni specifiche, eventualmente da poter contemplare nel Piano Urbanistico Comunale, per l'adeguamento, nel tempo, degli spazi urbani a criteri di sicurezza./[English]: One of the main requirements for well-functioning cities, and for their sustainability is that they have secure streets and public spaces. This circumstance is reaffirmed by the Sustainable Development Goals (SDG), in particular SDG 11 by which the creation of secure, as well as inclusive, resilient and sustainable cities is promoted. Security in the city is hindered everyday by the occurrence of predatory crimes or incivility episodes that affect the perception of insecurity raising fear. The growing demand for security that citizens ask for requires a new perspective with respect to the approaches that have been adopted so far to deal with this problem. The objective of making the city safer cannot be pursued exclusively through control or repressive actions or with occasional and generalised social interventions. It is necessary to address the issue in a multidisciplinary and multi-level perspective, following an integrated approach that incorporates considerations, abilities, strategies and actions of an urban planning, architectural, social, criminological, legal and political nature. This collection is an opportunity to reflect, in a more

careful way, on a particularly complex issue, integrating different knowledge and points of view that can guide Urban Planning towards the preparation of specific actions, possibly to be included in the Municipal Urban Plan, for the adaptation, over time, of urban spaces to security criteria.

Marcovaldo Italo Calvino 2012-10-26 A charming portrait of one man's dreams and schemes, by "the greatest Italian writer of the twentieth century" (The Guardian). In this enchanting book of linked stories, Italo Calvino charts the disastrous schemes of an Italian peasant, an unskilled worker in a drab northern industrial city in the 1950s and '60s, struggling to reconcile his old country habits with his current urban life. Marcovaldo has a practiced eye for spotting natural beauty and an unquenchable longing for the unspoiled rural world of his imagination. Much to the continuing puzzlement of his wife, his children, his boss, and his neighbors, he chases his dreams and gives rein to his fantasies, whether it's sleeping in the great outdoors on a park bench, following a stray cat, or trying to catch wasps. Unfortunately, the results are never quite what he anticipates. Spanning from the 1950s to the 1960s, the twenty stories in Marcovaldo are alternately comic and melancholy, farce and fantasy. Throughout, Calvino's unassuming masterpiece "conveys the sensuous, tangible qualities of life" (The New York Times).

Science and Conservation for Museum Collection Bruno Fabbri 2017-06-06

The idea of the book "Science and Conservation for Museum Collections" was born as a result of the experience made by CNR-ISTEC (Faenza) in the implementation of a course for Syrian restorers at the National Museum in Damascus. The book takes

into consideration archaeological artefacts made out of the most common materials, like stones (both natural and artificial), mosaics, ceramics, glass, metals, wood and textiles, together with less diffuse artefacts and materials, like clay tablets, goldsmith artefacts, icons, leather and skin objects, bones and ivory, coral and mother of pearl. Each type of material is treated from four different points of view: composition and processing technology; alteration and degradation causes and mechanisms; procedures for conservative intervention; case studies and/or examples of conservation and restoration. Due to the high number of materials and to the great difference between their conservation problems, all the subjects are treated in a schematic, but precise and complete way. The book is mainly addressed to students, young restorers, conservators and conservation scientists all around the world. But the book can be usefully read by expert professionals too, because nobody can know everything and the experts often need to learn something of the materials not included in their specific knowledge. Twenty- two experts in very different fields of activity contributed with their experience for obtaining a good product. All they are Italian experts, or working in Italy, so that the book can be seen as an exemplification on how the conservation problem of Cultural Heritage is received and tackled in Italy.

Efficienza energetica e patrimonio costruito Elena Lucchi 2013-10-01
 L'efficienza energetica è argomento molto discusso. Ciò nonostante non sono numerosi i testi, almeno in lingua italiana, dedicati ad affrontare la questione del miglioramento delle prestazioni energetiche del patrimonio storico, particolarmente di quello sottoposto a tutela per la sua importanza e di quello di speciale delicatezza

compreso nei centri storici, che costituisce il vero tessuto di qualità nel nostro paese. Questa carenza è stata la prima ragione che ha mosso il progetto del libro. La seconda è legata alla considerazione che il tema qui discusso faccia strettamente parte del progetto di conservazione degli edifici antichi, che necessitano per la natura propria degli oggetti su cui si interviene, di operazioni strettamente commisurate e compatibili. La terza ragione è la profonda affinità che sussiste tra cultura della conservazione e cultura della sostenibilità. Il taglio scelto non è quello più consueto del manuale, in cui sono disponibili precise soluzioni tecniche da applicare; si è infatti preferita una logica più prossima a quella di una "guida" alle scelte da compiersi in vista di futuri interventi di adeguamento. Il libro è diviso in due sezioni per prospettare l'inquadramento della tematica e far seguire ad esso proposte di intervento che esemplifichino le possibilità applicative, entro una logica di attenzione all'edilizia esistente. La parte dedicata alla presentazione dei casi studio ha la funzione, quasi espediente retorico, di dimostrare, dopo la trattazione teorica, che è possibile raggiungere l'obiettivo auspicato di coniugare tutela e maggiore efficienza. Ma la divisione è anche frutto di un'altra evidente necessità: quella di dover bilanciare ragionamenti generali con l'esame di esempi specifici nei quali analisi e scelte di intervento, data l'infinita vastità dei casi reali, si prospettano sempre come unici. La prima parte ha inizio dall'analisi del quadro normativo da cui emerge la sottovalutazione delle caratteristiche di manufatti nati per sfruttare al meglio le possibilità insite nelle tecniche costruttive un

tempo disponibili e nel rapporto con l'ambiente circostante. Per questo motivo se ne richiamano i principi costruttivi. Segue la trattazione del comportamento termofisico dell'edilizia esistente, esaminato in rapporto a quanto viene oggi richiesto per il calcolo del fabbisogno energetico. Il passo successivo è l'analisi delle tecniche di valutazione energetica applicate al patrimonio storico, confrontando procedure di certificazione e di diagnosi. Queste ultime sono però ad oggi pensate per edifici di nuova costruzione, e dunque poco accurate nella stima delle prestazioni di architetture caratterizzate da peculiarità. Un ulteriore approfondimento è legato all'analisi dei nodi "critici" dal punto di vista degli scambi termoigrometrici con l'ambiente, che possono generare condizioni di rischio per la conservazione, e che risultano sfidanti per il miglioramento energetico. Non poteva poi essere omissa un capitolo dedicato agli interventi, con lo scopo non di prospettare abachi di tecnologie disponibili, quanto di esaminare il ventaglio delle possibilità oggi offerte, rispetto alla loro compatibilità ed efficacia nell'applicazione all'edilizia storica. È sembrato inoltre opportuno chiarire il ruolo e i compiti attribuiti al Ministero dei Beni e delle Attività Culturali esplicitati attraverso provvedimenti volti a conformare e regolare diritti e comportamenti inerenti il patrimonio culturale. Chiude la prima parte un riesame del quadro delineato, per ripercorrerne le criticità e tentare di proporre correttivi, nella prospettiva di accogliere la sfida del miglioramento energetico anche del patrimonio costruito storico, senza però inutili sacrifici che

causerebbero un'inopinata diminuzione dei suoi valori. Nella seconda parte vengono presentati vari casi studio che considerano aspetti importanti e complementari tra loro, sia per quel che riguarda la scala più vasta, che quella del singolo edificio. Nella diversità di esperienze e di proposte emerge come generale consonanza la necessità di avere, quale requisito fondamentale per poter intervenire in forma appropriata, quello della conoscenza di ciò che si ha di fronte, e la dimostrazione dell'esigenza di trovare interventi ad hoc evitando "automatismi" che non possono avere spazio nell'ambito qui considerato. Elena Lucchi è architetto, dottore di ricerca in Tecnologia e Progetto per la Qualità Ambientale a scala Edilizia e Urbana e docente incaricato presso il Politecnico di Milano e l'Università degli Studi di Milano. To Err Is Human Institute of Medicine 2000-03-01 Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS—three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. *To Err Is Human* breaks the silence that has surrounded medical errors and their consequence—but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda—with state and local implications—for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors—which begs the question, "How can we learn from our mistakes?"

Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. *To Err Is Human* asserts that the problem is not bad people in health care—it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates—as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

Asylums Erving Goffman 2017-09-08 A total institution is defined by Goffman as a place of residence and work where a large number of like-situated, individuals, cut off from the wider society for an appreciable period of time, together lead an enclosed, formally administered round of life. Prisons serve as a clear example, providing we appreciate that what is prison-like about prisons is found in institutions whose members have broken no laws. This volume deals with total institutions in general and, mental hospitals, in particular. The main focus is, on the world of the inmate, not the world of

the staff. A chief concern is to develop a sociological version of the structure of the self. Each of the essays in this book were intended to focus on the same issue--the inmate's situation in an institutional context. Each chapter approaches the central issue from a different vantage point, each introduction drawing upon a different source in sociology and having little direct relation to the other chapters. This method of presenting material may be irksome, but it allows the reader to pursue the main theme of each paper analytically and comparatively past the point that would be allowable in chapters of an integrated book. If sociological concepts are to be treated with affection, each must be traced back to where it best applies, followed from there wherever it seems to lead, and pressed to disclose the rest of its family.

Healing Gardens Clare Cooper Marcus
1999-06-15 Although the healing qualities of nature have been recognized and relied on for centuries as a valuable part of convalescence, recent history has seen nature's therapeutic role virtually eclipsed by the technological dominance of modern medicine. As the twentieth century comes to a close and the medical community reacknowledges the importance of the environment to recovery, the healing garden is emerging as a supplement to drug- or technology-based treatments. Healing Gardens celebrates this renewed interest in nature as a catalyst for healing and renewal by examining the different therapeutic benefits of healing gardens and offering essential design guidance from experts in the field. Unique and comprehensive, Healing Gardens provides up-to-date coverage of research findings, relevant design principles and approaches, and best

practice examples of different types of healing gardens. It begins by exploring what current research reveals about the connection between nature, human stress reduction, and medical outcomes. It then presents case studies and design guidelines for outdoor spaces in medical settings that include general, psychiatric, and children's hospitals as well as hospices, nursing homes, and Alzheimer's facilities. Historical information, literature reviews, and studies on use are included for each type of outdoor space covered, offering important insights into what works in healing gardens-and what doesn't. Generously supplemented with photographs, site plans, anecdotes, and more, Healing Gardens is an invaluable practical guide for landscape architects and others involved in creating and maintaining medical facilities, and an extremely useful reference for those responsible for patient care. A unique and comprehensive look at the therapeutic effects and design of healing gardens For more and more people, the shortest road to recovery is the one that leads through a healing garden. Combining up-to-date information on the therapeutic benefits of healing gardens with practical design guidance from leading experts in the field, Healing Gardens is an important resource for landscape architects and others working in this emerging area. With the help of site plans, photographs, and more, it presents design guidelines and case studies for outdoor spaces in a range of medical settings, including: * Acute care general hospitals. * Psychiatric hospitals. * Children's hospitals. * Nursing homes. * Alzheimer's facilities. * Hospices.

Noun+Noun Compounds in Italian

Radimský Jan 2015-12-28 This book investigates one concrete compounding

pattern in present-day Italian within a larger overview of Italian compounding. Various accounts and classifications of Noun + Noun combinations in Italian are reviewed, with special focus on the status of the lexical integrity hypothesis. The author sets out to propose an integrated approach to the Noun + Noun compounding pattern, rigorously based on large representative data sets that were extracted from the Italian web corpus ItWaC as both automatically and manually post-processed frequency lists. On the basis of such data, it is aimed to show the behaviour of various subtypes of Noun + Noun compounds. Starting out with the Bisetto-Scalise classification, the author carefully examines the status of coordinate compounds, ATAP compounds (i.e., the group comprising attributive and appositive structures) and subordinate compounds (comprising verbal-nexus and grounding compounds), discussing both theoretical and empirical implications of this classification scheme. Moreover, the original Bisetto-Scalise model is supplemented with further classification levels in order to capture specific compounding types such as relational (i.e. inherently trinomial) compounds. A major merit of the present study lies in the quantitative dimension of the data it deals with. In light of this data, the author emphasizes the gradient nature of the traditional dichotomy between syntax and compounding. The book will thus appeal not only to the linguists interested specifically in Italian word-formation, but also to a larger community of scholars who seek a more general view of the word-formation phenomena.

Five Albanian Villages Antonio Laurià
2020-12-27 This book is the result of a research project designed and

carried out at the Department of Architecture, University of Florence. This research was based on the transfer of knowledge from members of the Albanian Diaspora in Italy (university students, young architects and researchers) to their home country. This unique process blazed a trail in the Albania-related studies by creating a methodology, which could be replicated not only in Albanian rural contexts, but also elsewhere. The book constitutes a structured tool for generating sustainable and socially inclusive territorial development processes in five lesser-known Albanian cultural sites. Their tangible and intangible cultural heritage was seen as a driving factor for triggering development processes aimed at improving the inhabitants' quality of life and strengthening local identity and social networks. Through concrete proposals and strategies, the book offers scenarios and solutions capable of enhancing the potential of each village and, at the same time, counteracting the effects of land abandonment that so often characterise them.

Managing the Risks of Organizational Accidents James Reason 2016-01-29
Major accidents are rare events due to the many barriers, safeguards and defences developed by modern technologies. But they continue to happen with saddening regularity and their human and financial consequences are all too often unacceptably catastrophic. One of the greatest challenges we face is to develop more effective ways of both understanding and limiting their occurrence. This lucid book presents a set of common principles to further our knowledge of the causes of major accidents in a wide variety of high-technology systems. It also describes tools and techniques for managing the risks of such organizational

accidents that go beyond those currently available to system managers and safety professionals. James Reason deals comprehensively with the prevention of major accidents arising from human and organizational causes. He argues that the same general principles and management techniques are appropriate for many different domains. These include banks and insurance companies just as much as nuclear power plants, oil exploration and production companies, chemical process installations and air, sea and rail transport. Its unique combination of principles and practicalities make this seminal book essential reading for all whose daily business is to manage, audit and regulate hazardous technologies of all kinds. It is relevant to those concerned with understanding and controlling human and organizational factors and will also interest academic readers and those working in industrial and government agencies.

Urban Agriculture Europe Frank Lohrberg 2016 "How can agriculture contribute to the sustainable development of European cities? How can agriculture and horticulture create vital urban spaces that have new social and ecological qualities and are also economically viable? Urban Agriculture Europe is the first comprehensive, transdisciplinary publication about urban agriculture in Europe. Apart from well-known examples of urban food gardens in Western European metropolises, this volume also studies innovative forms of periurban agriculture, bringing in experiences in Eastern and Southern Europe. The contributions approach urban agriculture from the point of view of social science, the economy, agricultural ecology, and spatial planning and address the role of citizens, involved parties, and politics, as well as operational

models and planning tools. Case studies from Barcelona, Dublin, Geneva, Milan, Sofia, Warsaw, and the Ruhr Metropolis allow a comparative view of European practice. Statements from involved parties and guidance for cities and regions round off the publication."--Page 4 of cover.

The Curious Incident of the Dog in the Night-Time Mark Haddon 2009-02-24

A bestselling modern classic—both poignant and funny—narrated by a fifteen year old autistic savant obsessed with Sherlock Holmes, this dazzling novel weaves together an old-fashioned mystery, a contemporary coming-of-age story, and a fascinating excursion into a mind incapable of processing emotions. Christopher John Francis Boone knows all the countries of the world and their capitals and every prime number up to 7,057. Although gifted with a superbly logical brain, Christopher is autistic. Everyday interactions and admonishments have little meaning for him. At fifteen, Christopher's carefully constructed world falls apart when he finds his neighbour's dog Wellington impaled on a garden fork, and he is initially blamed for the killing. Christopher decides that he will track down the real killer, and turns to his favourite fictional character, the impeccably logical Sherlock Holmes, for inspiration. But the investigation leads him down some unexpected paths and ultimately brings him face to face with the dissolution of his parents' marriage. As Christopher tries to deal with the crisis within his own family, the narrative draws readers into the workings of Christopher's mind. And herein lies the key to the brilliance of Mark Haddon's choice of narrator: The most wrenching of emotional moments are chronicled by a boy who cannot fathom emotions. The effect is dazzling, making for one of the freshest debut in years: a comedy, a

tearjerker, a mystery story, a novel of exceptional literary merit that is great fun to read.

Antwerp, Territory of a New Modernity

Bernardo Secchi 2009 The Structure Plan for Antwerp was drawn up between May 2003 and June 2006. During that period Milan based architects Bernardo Secchi and Paola Viganò experienced Antwerps ambitions and its need for a vision. This book measures their ideas and imagination with the myth that is Antwerp, but also with that remarkable contemporary reality of Antwerp - the territory of a New Modernity. The book shows several possible strategies for urbanistic changes within the city. The authors show that Antwerp is to be seen in different ways: Antwerp as a water-city, Antwerp as a harbour-city, Antwerp as a railcity, Antwerp as a ecocity ... But, by emphasising the spatial character of the Structure Plan of Antwerp, it clearly breaks with previous planning approaches and it gives new insights. This books narrative-shuttling between structuring visions, various scenarios, a project atlas and numerous micro-stories-illustrates new methods for urbanism, with a very fine balance between reflection and action in urbanism.

History of the Restoration and Conservation of Works of Art

Alessandro Conti 2016-01-20 At times controversial and uncompromising, always intellectually honest, Alessandro Conti's book is - astonishingly - the only attempt to comprehensively chart in time, the changing impact of man's desire to preserve for future generations the materials, meaning and appearances of works of art. Remarkable in its meticulous research of source material and breadth of scope, History of the Restoration and Conservation of Works of Arts,

translated by Helen Glanville, charts the practices and underlying philosophies of conservation and 'restored' works of art from the Middle Ages to the end of the nineteenth century. In English-speaking countries, a lack of foreign language skills leaves many unable to consult a wealth of both published and unpublished historical documentation. Developments in conservation have therefore tended toward the scientific and analytical. Access to such documentation leads to better understanding of the present appearance of works of art and of their changing aspect and perception over time. Recent publications indicate that there is a great need for people writing on the subject to be aware of material which is not in their mother tongue: approaches presented as 'new' are in fact merely 'contemporary', and have been discussed or practiced in other centuries and countries. Just as knowledge of practices and effects of art conservation and restoration should form an integral part of History of Art Degrees, the more theoretic, abstract and historical aspects, should also be part of the training. This book is an invaluable source for academic and public institutions, art historians as well as practicing conservators and lovers of art.

History of Architectural Conservation

Jukka Jokilehto 2007-06-07 A History of Architectural Conservation expands knowledge about the conservation of ancient monuments, works of art and historic buildings. It includes the origins of the interest in conservation within the European context, and the development of the concepts from Antiquity and the Renaissance to the present day. Jokilehto illustrates how this development has influenced international collaboration in the

protection and conservation of cultural heritage, and how it has formed the principal concepts and approach to conservation and restoration in today's multi-cultural society. This book is based on archival research of original documents and the study of key restoration examples in countries that have influenced the international conservation movement. Accessible and of great interest to students and the general public it includes conservation trends in Europe, the USA, India, Iran and Japan.

Theory of Restoration Cesare Brandi 2005

Planning on the Edge Nick Gallent 2006-09-27 More than a tenth of the land mass of the UK comprises 'urban fringe': the countryside around towns that has been called 'planning's last frontier'. One of the key challenges facing spatial planners is the land-use management of this area, regarded by many as fit only for locating sewage works, essential service functions and other un-neighbourly uses. However, to others it is a dynamic area where a range of urban and rural uses collide. Planning on the Edge fills an important gap in the literature, examining in detail the challenges that planning faces in this no-man's land. It presents both problems and solutions, and builds a vision for the urban fringe that is concerned with maximising its potential and with bridging the physical and cultural rift between town and country. Its findings are presented in three sections: the urban fringe and the principles underpinning its management sectoral challenges faced at the urban fringe (including commerce, energy, recreation, farming, and housing) managing the urban fringe more effectively in the future. Students, professionals and researchers alike

will benefit from the book's structured approach, while the global and transferable nature of the principles and ideas underpinning the study will appeal to an international audience.

The Shroud at Court 2019-03-27 The Shroud at the Court analyses the ties between the Shroud and the Savoy court from the fifteenth to twentieth centuries, when rituals, ceremonies, and images made the relic an essential source of legitimacy and propaganda for the Savoy dynasty.

Intersections without Traffic Signals II Werner Brilon 2012-12-06 In March 1988, an international workshop on intersections without traffic signals was held at the Ruhr-University in Bochum, Germany. The proceedings of this workshop were published by Springer 1). The workshop was performed in a very harmonious atmosphere, which stimulated the experts from different countries to communicate and exchange their ideas and experiences. The presentations and the written contributions documented the present state of technical solutions for design and engineering of unsignalized intersections both regarding scientific research and practical applications. Moreover, numerous unsolved problems were identified. Thus, the 1988 workshop stimulated new developments in the field of unsignalized intersections in several countries. In the meantime, these investigations have led to a remarkable progress. For example in Germany a new guideline for unsignalized cross intersections and T-junctions has been finished and is going to be introduced in 1991. New results on roundabout capacity have been worked out as well. Many

particularly important developments were made in foreign countries. Especially in the United States, an increasing interest in this subject can be observed. In the annual meetings of the TRB, this item received great attention. Many research institutes in North America have concentrated their activities on that point. A new TRB-circular concerning unsignalized intersections is going to be published. It will contain a new procedure for four-way-stop-control intersections, which seems to be a special feature of North American traffic engineering. However, new results from the US for two-way-stop control intersections are available as well.

Europe and Empire Massimo Cacciari
2016-01-04 The European Union and the single currency have given Europe more stability than it has known in the past thousand years, yet Europe seems to be in perpetual crisis about its global role. The many European empires are now reduced to a multiplicity of ethnicities, traditions, and civilizations. Europe will never be One, but to survive as a union it will have to become a federation of "islands" both distinct and connected. Though drawing on philosophers of Europe's past, Cacciari calls not to resist Europe's sunset but to embrace it. Europe will

have to open up to the possibility that in few generations new exiles and an unpredictable cultural hybridism will again change all we know about the European legacy. Though scarcely alive in today's politics, the political unity of Europe is still a necessity, however impossible it seems to achieve.

Assessing Medical Technologies

Institute of Medicine 1985-02-01 New drugs, new devices, improved surgical techniques, and innovative diagnostic procedures and equipment emerge rapidly. But development of these technologies has outpaced evaluation of their safety, efficacy, cost-effectiveness, and ethical and social consequences. This volume, which is "strongly recommended" by The New England Journal of Medicine "to all those interested in the future of the practice of medicine," examines how new discoveries can be translated into better care, and how the current system's inefficiencies prevent effective health care delivery. In addition, the book offers detailed profiles of 20 organizations currently involved in medical technology assessment, and proposes ways to organize U.S. efforts and create a coordinated national system for evaluating new medical treatments and technology.
