Rural and urban linkages: Operation flood's role in India's dairy development Kenda Cunningham 2009

Between 1970 and 2009, India has overcome many infrastructural, market, and institutional challenges to transition from a dairy importing nation to the top producer in the world of both buffalo and goat milk, as well as the sixth largest producer of cow milk. In India, at least 100 million households are involved in farming and 70 million have dairy cattle. In India, dairy production is important for employment, income levels, and the nutritional quality of diets. Milk production in India is dominated by smallholder farmers including landless agricultural workers. For example, 80 percent of milk comes from farms with only two to five cows. A well-known smallholder dairy production initiative, Operation Flood, laid the foundation for a dairy cooperative movement that presently ensures returns on dairy investments to 13 million members. Operation Flood also advanced infrastructural improvements to enable the procurement, processing, marketing, and production of milk and to link India's major metropolitan cities with dairy cooperatives

nationwide. This intervention transformed the policy environment, brought significant technological advancements into the rural milk sector, established many village cooperatives, and oriented the dairy industry toward markets.

Family Farming And Rural Economic Development M.L. Choudhary 2015-01-15 Family farming is the predominant form of agriculture in the food production sectors in both developing and developed countries. It mainly includes all family-based agricultural activities, and it is linked to several areas of rural and social development. It is understood as a means of organizing agricultural, forestry, fisheries, pastoral and aquaculture production which is managed and operated by a family and increasingly reliant on family labour of both men and women. In developing countries like India, a number of factors are key for the successful development of family farming, such as: agro-ecological conditions and territorial characteristics; access to markets; policy environment; access to land and natural resources; access to technology and extension services; access to finance; demographic, economic and socio-cultural conditions; availability of specialized education among a few. The United Nations has designated the year 2014 as the International Year of Family Farming at the 66th session of the United Nations General Assembly recognizing the increasing role of family farming in poverty alleviation and rural development in particular. The content of the book offers a diverse selection of s that address issues of importance to those in the agriculture industry, researchers, faculty, and others.

Enhancing Food Safety National Research Council 2010-12-04 Recent outbreaks of illnesses traced to contaminated sprouts and lettuce illustrate the holes that exist in the system for monitoring problems and preventing foodborne diseases. Although it is not solely responsible for ensuring the safety of the nation's food supply, the U.S. Food and Drug Administration (FDA) oversees monitoring and intervention for 80 percent of the food supply. The U.S. Food and Drug Administration's abilities to discover potential threats to food safety and prevent outbreaks of foodborne illness are hampered by impediments to efficient use of its limited resources and a piecemeal approach to gathering and using information on risks. Enhancing Food Safety: The Role of the Food and Drug Administration, a new book from the Institute of Medicine and the National Research Council, responds to a congressional request for recommendations on how to close gaps in FDA's food safety systems. Enhancing Food Safety begins with a brief review of the Food Protection Plan (FPP), FDA's food safety philosophy developed in 2007. The lack of sufficient detail and specific strategies in the FPP renders it ineffectual. The book stresses the need for FPP to evolve and be supported by the type of strategic planning described in these pages. It also explores the development and implementation of a stronger, more effective food safety system built on a risk-based approach to food safety management. Conclusions and recommendations include adopting a risk-based decision-making approach to food safety; creating a data surveillance and research infrastructure; integrating federal, state, and local government food safety programs; enhancing efficiency of inspections; and more. Although food safety is the responsibility of everyone, from producers to consumers, the FDA and other regulatory agencies have an essential role. In many instances, the FDA must carry out this responsibility against a backdrop of multiple stakeholder interests, inadequate resources, and competing priorities. Of interest to the food production

industry, consumer advocacy groups, health care professionals, and others, Enhancing Food Safety provides the FDA and Congress with a course of action that will enable the agency to become more efficient and effective in carrying out its food safety mission in a rapidly changing world.

Institutional versus noninstitutional credit to agricultural households in India: Evidence on impact from a national farmers' survey Kumar, Anjani 2017-03-02 A goal of agricultural policy in India has been to reduce farmers' dependence on informal credit. To that end, recent initiatives have been focused explicitly on rural areas and have had a positive impact on the flow of agricultural credit. But despite the significance of these initiatives in enhancing the flow of institutional credit to agriculture, the links between institutional credit and net farm income and consumption expenditures in India are not very well documented. Using a large national farm household-level dataset and instrumental variables two-stage least squares estimation methods, we investigate the impact of institutional farm credit on farm income and farm household consumption expenditures. Our findings show that in India, formal credit is indeed playing a critical role in increasing both the net farm income and per capita monthly household expenditures of Indian farm families. We also find that, in the presence of formal credit, social safety net programs such as the Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) may have unintended consequences. In particular, MGNREGA reduces both net farm income and per capita monthly household consumption expenditures. In contrast, in the presence of formal credit, the Public Distribution System may increase both net farm income and per capita monthly household consumption expenditures.
