His realisations are telling and connect easily. A celestial comet is horrendously hurled towards Hoola, on a direct collision course. The collision could potentially wipe out all life on the uniquely colourful planet, including the technologically advanced Hoos. The impending calamity notwithstanding, the Hoos find themselves faced with yet another predicament that creeps up from within themselves. Meanwhile, silently blossoms love. Will the Hoos come around to overcome both the external and the internal obstacles that threaten their very existence? Or will they crumble under the weight of their own

experience and ability you are already well aware. In order that he may have sufficient time for his address, I circulate this paper beforehand, so that all the time saved in its reading will be turned to much better account by him. I propose the following question: Is India at present in a condition to produce enough to supply all its wants ?

Sethi and Thompson have provided management science and economics communities with a thoroughly revised edition of their classic text on Optimal Control Theory. The new edition has been completely refined with careful attention to the text and graphic material presentation. Chapters cover a range of topics including finance, production and inventory problems, marketing problems, machine maintenance and replacement, problems of optimal consumption of natural resources, and applications of control theory to economics. The book contains new results that were not available when the first edition was published, as well as an expansion of the material on stochastic optimal control theory.
