**Delivering High-Quality Cancer Care** Committee on Improving the Quality of Cancer Care: Addressing the Challenges of an Aging Population 2014-01-10 In the United States, approximately 14 million people have had cancer and more than 1.6 million new cases are diagnosed each year. However, more than a decade after the Institute of Medicine (IOM) first studied the quality of cancer care, the barriers to achieving excellent care for all cancer patients remain daunting. Care often is not patient-centered, many patients do not receive palliative care to manage their symptoms and side effects from treatment, and decisions about care often are not based on the latest scientific evidence. The cost of cancer care also is rising faster than many sectors of medicine--having increased to \$125 billion in 2010 from \$72 billion in 2004--and is projected to reach \$173 billion by 2020. Rising costs are making cancer care less affordable for patients and their families and are creating disparities in patients' access to high-quality cancer care. There also are growing shortages of health professionals skilled in providing cancer care, and the number of adults age 65 and older--the group most susceptible to cancer--is expected to double by 2030, contributing to a 45 percent increase in the number of people developing cancer. The current care delivery system is poorly prepared to address the care needs of this population, which are complex due to altered physiology, functional and cognitive impairment, multiple coexisting diseases, increased side effects from treatment, and greater need for social support. **Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis** presents a conceptual framework for improving the quality of cancer care. This study proposes improvements to six interconnected components of care: (1) engaged patients; (2) an adequately staffed, trained, and coordinated workforce; (3) evidence-based care; (4) learning health care information technology (IT); (5) translation of evidence into clinical practice, quality measurement and performance improvement; and (6) accessible and affordable care. This report recommends changes across the board in these areas to improve the quality of care. **Delivering High-Quality Cancer Care: Charting a New Course for a System in Crisis** provides information for cancer care teams, patients and their families, researchers, quality metrics developers, and payers, as well as HHS, other federal agencies, and industry to reevaluate their current roles and responsibilities in cancer care and work together to develop a higher quality care delivery system. By working toward this shared goal, the cancer care community can improve the quality of life and outcomes for people facing a cancer diagnosis.

*Typology of Knowledge, Skills and Competences* Jonathan Winterton 2006 The third in a series of Cedefop publications dealing with technical aspects of the European Qualification Framework and European Credit Transfer System, this book analyses current practice in countries that have made progress with evaluating and defining competence. It proposes a typology of knowledge, skills and competence, to be used not as an instrument of 'harmonisation' between countries, but as a template to enable comparison. The aim is to promote mobility in every sense, bringing work-based learning and knowledge acquired in higher education closer together.

*Portfolio Development and the Assessment of Prior Learning* Elana Michelson 2004 For over thirty years, portfolios have been used to help adult learners gain recognition for their prior learning and take greater control of their educational experiences. The portfolio has become a distinctive means of assessing such learning, serving as a meaningful alternative to conventional papers and standardized testing. **Portfolio Development and the Assessment of Prior Learning: Perspectives, Models, and Practices** provides a primer of flexible approaches to shaping and conducting portfolio-development courses. It offers practitioners in the field an extensive range of model assignments, readings, and classroom activities, each organized around a specific theme: Academic Orientation, The Meaning of Education, Personal Exploration, Learning from the Outsider Within, The World of Work and Careers, and Dimensions of Expertise. Twelve case studies by practitioners in the field then show how academics in the US and around the English-speaking world have adapted the portfolio to changing circumstances in order to deliver academically rich educational services for adults. These case studies highlight portfolio development in the context of web-based instruction, changing institutional imperatives, service to historically disenfranchised groups, partnerships with industry, and cross-institutional cooperation. In addition to serving as a valuable hands-on resource for practitioners, **Portfolio Development and the Assessment of Prior Learning** locates portfolios and assessment in a broad social and intellectual context. Thus, the authors also offer an historical overview of the usefulness of portfolios in the assessment of prior learning and then consider their use in the future, given current trends in higher education for adults. The book explores the implications of a changing educational landscape, in which new student populations, budgetary pressures, and understandings of knowledge both enrich and challenge student-centered approaches such as portfolios. The approaches and case studies are not only valuable to adult educators but, equally, to faculty in higher education concerned with the development of competency- and outcomes-based assessment.

**STEM and Social Justice: Teaching and Learning in Diverse Settings** Cheryl B. Leggon 2017-06-06 This volume focuses on selected innovative programs designed to augment the science, engineering, engineering and mathematics (STEM) workforce through increasing and enhancing the participation of under-represented groups. **Mathematics in Early Childhood** Amy MacDonald 2018-05-14 The theoretical, practical and content guide to early childhood mathematics education. Mathematics in Early Childhood Education explores mathematics in a range of early childhood contexts, including home, playgroup, childcare, preschool, and school. This book unfolds layers of knowledge relevant to early childhood mathematics education to help pre-service teachers increase confidence and build up a comprehensive professional identity as a mathematics educator. Part 1 explains the overarching theoretical framework for the teaching of mathematics in early childhood education, including a dedicated chapter on curricula. Part 2 includes opinion pieces

to various mathematics education approaches helping students to develop various theoretical perspectives. Part 3 provides lesson plans on topics such as patterns, measurement and space and geometry, allowing students to fully engross themselves in mathematics content. Mathematics in Early Childhood Education balances theoretical perspectives with strong practical examples and teacher guidance providing pre-service educators an all-round solution to teaching mathematics in early childhood.

**Vital Directions for Health & Health Care** Victor J. Dzau 2018-01-18 What can be more vital to each of us than our health? Yet, despite unprecedented health care spending, the U.S. health system is substantially underperforming, especially with respect to what should be possible, given current knowledge. Although the United States is currently devoting 18% of its Gross Domestic Product to delivering medical care--more than \$3 trillion annually and nearly double the expenditure of other advanced industrialized countries--the U.S. health system ranked only 37th in performance in a World Health Organization assessment of member nations. In **Vital Directions for Health & Health Care: An Initiative of the National Academy of Medicine**, the U.S. National Academy of Medicine (NAM, formerly the Institute of Medicine), which has long stood as the nation's most trusted independent source of guidance in health, health care, and biomedical science, has marshaled the wisdom of more than 150 of the nation's best researchers and health policy experts to assess opportunities for substantially improving the health and well-being of Americans, the quality of care delivered, and the contributions of science and technology. This publication identifies practical and affordable steps that can and must be taken across eight action and infrastructure priorities, ranging from paying for value and connecting care, to measuring what matters most and accelerating the capture of real-world evidence. Without obscuring the difficulty of the changes needed, in **Vital Directions**, the NAM offers an important blueprint and resource for health, policy, and leaders at all levels to achieve much better health outcomes at much lower cost.

**Building the Case for Health Literacy** National Academies of Sciences, Engineering, and Medicine 2018-08-26 The field of health literacy has evolved from one focused on individuals to one that recognizes that health literacy is multidimensional. While communicating in a health literate manner is important for everyone, it is particularly important when communicating with those with limited health literacy who also experience more serious medication errors, higher rates of hospitalization and use of the emergency room, poor health outcomes, and increased mortality. Over the past decade, research has shown that health literacy interventions can significantly impact various areas including health care costs, outcomes, and health disparities. To understand the extent to which health literacy has been shown to be effective at contributing to the Quadruple Aim of improving the health of communities, providing better care, providing affordable care, and improving the experience of the health care team, the National Academies of Sciences, Engineering, and Medicine convened a public workshop on building the case for health literacy. This publication summarizes the presentations and discussions from the workshop, and highlights important lessons about the role of health literacy in meeting the Quadruple Aim, case studies of organizations that have adopted health literacy, and discussions among the different stakeholders involved in making the case for health literacy.

**Global Perspectives on Recognising Non-Formal and Informal Learning** Madhu Singh 2015-06-05 This book deals with the relevance of recognition and validation of non-formal and informal learning education and training, the workplace and society. In an increasing number of countries, it is at the top of the policy and research agenda ranking among the possible ways to redress the glaring lack of relevant academic and vocational qualifications and to promote the development of competences and certification procedures which recognise different types of learning, including formal, non-formal and informal learning. The aim of the book is therefore to present and share experience, expertise and lessons in such a way that enables its effective and immediate use across the full spectrum of country contexts, whether in the developing or developed world. It examines the importance of meeting institutional and political requirements that give genuine value to the recognition of non-formal and informal learning; it shows why recognition is important and clarifies its usefulness and the role it serves in education, working life and voluntary work; it emphasises the importance of the coordination, interests, motivations, trust and acceptance by all stakeholders. The volume is also premised on an understanding of a learning society, in which all social and cultural groups, irrespective of gender, race, social class, ethnicity, mental health difficulties are entitled to quality learning throughout their lives. Overall the thrust is to see the importance of recognising non-formal and informal learning as part of the larger movement for re-directing education and training for change. This change is one that builds on an equitable society and economy and on sustainable development principles and values such as respect for others, respect for difference and diversity, exploration and dialogue.

**Testing, Teaching, and Learning** National Research Council 1999-10-06 State education departments and school districts face an important challenge in implementing a new law that requires disadvantaged students to be held to the same standards as other students. The new requirements come from provisions of the 1994 reauthorization of Title I, the largest federal effort in precollegiate education, which provides aid to "level the field" for disadvantaged students. Testing, Teaching, and Learning is written to help states and school districts comply with the new law, offering guidance for designing and implementing assessment and accountability systems. This book examines standards-based education reform and reviews the research on student assessment, focusing on the needs of disadvantaged students covered by Title I. With examples of states and districts that have track records in new systems, the committee develops a practical "decision framework" for education officials. The book explores how best to design assessment and accountability systems that support high levels of student learning and to work toward continuous improvement. Testing, Teaching, and Learning will be an important tool for all involved in educating disadvantaged students--state and local administrators and classroom teachers.

**Mathematical Theory in Periodic Plane Elasticity** Hai-Tao Cai 2014-04-21 Presenting the mathematical theory of period problems in plane elasticity by methods of complex variables. The most general formulations of such problems are proposed under the assumption that the stresses are periodic and the displacements are quasi-periodic. The general expression of complex displacements are illustrated. Periodic welding problems are studied by reducing them to periodic Riemann boundary value problems. Various periodic problems of the elastic half-plane (fundamental problems, contact problems) are treated and solved by reduction to Riemann-Hilbert boundary value problems with discontinuous coefficient. Periodic crack problems are investigated which are transferred to singular integral equations whose unique solvability is guaranteed.

**Dying in America** Institute of Medicine 2015-03-19 For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

**A Proposed Framework for Integration of Quality Performance Measures for Health Literacy, Cultural Competence, and Language Access Services** National Academies of Sciences, Engineering, and Medicine 2018-04-09 Health literacy, cultural competence, and language access services are distinct but inextricably linked concepts for delivering equitable care to all members of the increasingly diverse population of the United States. These concepts are linked, but they developed via different paths, and each has its own unique focus with regard to enabling every individual to obtain the ability to process and understand basic health information and services needed to make appropriate health care decisions. Fragmentation of these disciplines has impeded implementation of relevant measures for quality improvement and accountability. To foster an integrated approach to health literacy, cultural competency, and language access services, the Roundtable on Health Literacy initiated a project with three components: a commissioned paper to propose a framework for integrating measurements of health literacy, cultural competency, and language access; a workshop to review and discuss the framework; and a second commissioned paper that will provide a roadmap for integrating health literacy, cultural competency, and language access services as well as a revised measurement framework. Held on May 4, 2017, the workshop explored the quality performance measures for integration of health literacy, cultural competence, and language access services. This publication summarizes the presentations and discussions from the workshop.
