The Crisis in Economics Edward Fullbrook 2003-04-03
Economics can be pretty boring. Drier than Death Valley,
the discipline is obsessed with mathematics and
compounds this by arrogantly assuming its techniques can
be brought to bear on the other social sciences. It
wasn't going to be long, therefore, before students
started complaining. The vast majority have voted with
their feet and signed up for business and management
degrees, but in the past two years there has grown an
important new movement that has decided to tackle those
who think they run economics head-on. This is the Post-

autistic Economics Network. The PAE Network started in France and has spread first to Cambridge and then other parts of the world. The name derives from the fact that mainstream economics has been accused of institutional autism, ie. qualitative impairment of social interaction, failure to develop peer relationships and lack of emotional and social reciprocity. In short, economics has lost touch with reality and has become way too abstract. This book charts the impact the PAE Network has had so far and constitutes a manifesto for a different kind of economics - it features key contributions from all the major voices in heterodox economics including Tony Lawson, Deirdre McCloskey, Geoff Hodgson, Sheila Dow and Warren Samuels.

Behaviour of Lithium-Ion Batteries in Electric Vehicles

Gianfranco Pistoia 2018-02-10 This book surveys state-of-the-art research on and developments in lithium-ion batteries for hybrid and electric vehicles. It summarizes their features in terms of performance, cost, service life, management, charging facilities, and safety. Vehicle electrification is now commonly accepted as a means of reducing fossil-fuels consumption and air pollution. At present, every electric vehicle on the road is powered by a lithium-ion battery. Currently, batteries based on lithium-ion technology are ranked first in terms of performance, reliability and safety. Though other systems, e.g., metal-air, lithium-sulphur, solid state, and aluminium-ion, are now being investigated, the lithium-ion system is likely to dominate for at least the next decade - which is why several manufacturers, e.g., Toyota, Nissan and Tesla, are chiefly focusing on this technology. Providing comprehensive information on lithium-ion batteries, the book includes contributions by the world's leading experts on Li-ion batteries and vehicles.

Rent Seeking in China Tak-Wing Ngo 2008-12-04 In China, rent seeking has been linked to the idea of the local developmental state in which rapid economic development is explained in terms of the promotion of village and township enterprises by local cadres who wants to maximize revenue. At the same time, the rent-seeking state is also seen as the root of corrupt practices and in the creation of a political market where state assets

and authorities are diverted into private interests. Despite the prevalence of rent seeking practices in present day China, no systematic study of the phenomenon across different regions and economic sectors has yet been undertaken and as such what accounts for the occurrence of the phenomenon, what range of activities are related to rent seeking practices and, more importantly, how rent seeking shapes political and economic development are barely understood. Rent Seeking in China seeks to address these questions using case studies from across economics sectors including primary industry, strategic industry, heavy industry, and light industry. It will be invaluable reading for students and scholars of Chinese politics, comparative politics and Chinese economic and business management.

The Chase Across The Globe Dick Bryan 2019-07-11 Over the last 20 years - and especially over the last decade - the international expansion of money and commodities and the international relocation of production have grown tremendously. As a result, there now exists a real contradiction in accumulation: Although global in orientation, it remains structured by the nation state. Conventional economic literature generally explains the international economy as exogenous to the national economy. Though the former does influence the latter, national economy and policy remain discrete. Conversely, there is a developing literature on globalism that explores the tendency for international capital to eradicate national differences, even to overpower nation states. However, neither interpretation adequately considers the contradictions for national policy that have accompanied the internationalization of capital. In this volume, Dick Bryan examines the influence of the international economy upon domestic accumulation, describing the process as the expression of the contradiction between the international scope of accumulation and the national scope of its regulation. Developing a theoretical framework for understanding the contradiction within Marxist political economy, he addresses the theory of value on an international scale, as well as theories of global restructuring and crisis. These issues are then applied to those domestic policies - such as monetary policy and balance of payments - that interrelate with the international economy. The author argues that the conventional theories informing these approaches have consistently failed to recognize the contradictions in international accumulation. National economic management has, as a result, reverted to explicit class politics, attempting to solve domestic economic problems by targeting the living standards of labor

Industrial Change in China Kate Hannan 2012-10-12 This book analyses the industrial reform measures taken by the Chinese government during the decade 1985-95 and identifies the economic and political tensions and contradictions that state enterprise reform has presented to a leadership intent on maintaining its authoritative political position. Using government sources and interviews with economists and workers at one of China's largest state-owned enterprises (The Second Automobile/Dongfeng corporation), Hannan concludes that the relationship between state policy and enterprise is a complex two-way process characterised by tensions resulting from conflicting priorities.

Changing Lanes in China Eric Thun 2006-01-16 This book

addresses two of the most important trends in political economy during the last two decades - globalization and decentralization - in the context of the world's most rapidly growing economic power, China. The intent is to provide a better understanding of how local political and economic institutions shape the ability of Chinese state-owned firms to utilize foreign direct investment (FDI) to remake themselves in the transition from inefficient and technologically backward firms into powerful national champions. In a global economy, the author argues, local governments are increasingly the agents of industrial transformation at the level of the firm. Local institutions are durable over time, and they have important economic consequences. Through an analysis of five Chinese regions, the treatment seeks to specify the opportunities and constraints that alternative institutional structures create, how they change over time, and ultimately, how they prepare Chinese firms for the challenge of global competition.

Manual of Psychosocial Rehabilitation Robert King 2012-08-06 Psychosocial Rehabilitation is a comprehensive ready-reference for mental health practitioners and students, providing practical advice on the full range of interventions for psychosocial rehabilitation. It contextualises the interventions described and provides pointers to enable the reader to explore the theory and research. This manual recognises the wide-ranging impact of mental illness and its ramifications on daily life, and promotes a recovery model of psychosocial rehabilitation and aims to empower clinicians to engage their clients in tailored rehabilitation plans. The book is divided into five key sections. Section 1 looks at assessment covering tools available in the public domain, instruments, scoring systems, norms and applications for diagnosis and measurement of symptoms, cognitive functioning, impairment and recovery. Section 2 covers the full range of therapeutic interventions and offers advice on training and supervision requirements and evaluation of process, impact and outcome. Section 3 provides manuals and programs for intervention effectively provided as group activities. Section 4 explains how to design a full programme that integrates therapeutic interventions with group programmes as well as services provided by other agencies. The final section looks at peer support and self help, providing manuals and resources that support programmes and interventions not requiring professional or practitioner direction.

Death Revisited Arjan Louwen 2019 This book has been a long time in the making. When we left the field for the final time in 2009 we could only guess at what exactly we had found - we did not even have firm dates for most of the graves discovered. The post-excavation analysis of the finds and features proved to be a challenging task, and our interpretations had to be adjusted several times. This was for an important part due to the very complex soils and difficult-to-read features that made even the simplest questions such as 'where does a mound begin and end' difficult to answer.

Shift Carlos Ghosn 2007-12-18 In Shift, Carlos Ghosn, the brilliant, audacious, and widely admired CEO of Nissan, recounts how he took the reins of the nearly bankrupt Japanese automotive company and achieved one of the most remarkable turnarounds in automotive—and corporate—history. When Carlos Ghosn (pronounced like “phone”) was named COO of Nissan in 1999, the company was running out of gas and careening toward bankruptcy. Eighteen short months later, Nissan was back in the black, and within several more years it had become the most profitable large automobile company in the world. In SHIFT, Ghosn describes how he went about accomplishing the seemingly impossible, transforming Nissan once again into a powerful global automotive manufacturer. The Brazilian-born, French-educated son of Lebanese parents, Ghosn first learned the management principles and practices that would shape his decisions at Nissan while rising through the ranks at Michelin and Renault. Upon his arrival at Nissan, Ghosn began his new position by embarking on a three-month intensive examination of every aspect of the business. By October 1999 he was ready to announce his strategy to turn the company around with the Nissan Revival Plan. In the plan, he consistently challenged the tradition-bound thinking and practices of Japanese business when they inhibited Nissan's effectiveness. Ghosn closed plants, laid off workers, broke up long-standing supply networks, and sold off marginal assets to focus on the company's core business. But slashing costs was just the first step in Nissan's recovery. In fact, Ghosn introduced changes in every corner of the company, from manufacturing and engineering to marketing and sales. He updated Nissan's car and truck lineup, took risks on dynamic new designs, and demanded improvements in quality—strategies that quickly burnished Nissan's image in the marketplace, and re-established the company in the minds of consumers as a leader in innovation and engineering. Like the best-selling memoirs of Jack Welch, Lou Gerstner, and Larry Bossidy, SHIFT is a fascinating behind-the-scenes look at what it takes to transform and re-create a world-class company. Written by one of the world's most successful and acclaimed CEOs, SHIFT is an invaluable guide for business readers everywhere.

And Yet... Christopher Hitchens 2015-11-24 "This collection of essays brings together some of the finest pieces Hitchens published over the last two decades for the first time in one book, addressing with characteristic wit and erudition the subjects he is best known for, including: the case against God, faith and religious observance; the case for intervention in Iraq;

indictments of towering political figures like Bill and Hillary Clinton, Tony Blair, and Henry Kissinger; and celebrations of the writers and thinkers whose work meant most to him" --

Alternative Types of Roundabouts Tomaž Tollazzi

2014-11-07 This book presents a history of roundabouts, an introduction to their design, calculations of their capacity and traffic-safety features. It describes the key features of standard roundabouts and their limitations. Alternative types of roundabouts are a fairly recent development and have only been implemented in a few countries to date. The book illustrates a broad variety of these recent alternative types of roundabouts, as well as proposed types still in the development phase, explaining for each the specific needs it meets, its advantages and drawbacks. In closing, the book offers an outlook on the role of roundabouts in future street traffic.

A House to Remember Edna Gammon 2011-10-10 What happened at 10 Rillington Place was so shocking and gruesome that even today everyone over a certain age still remembers the case with a shudder. In 1950, Timothy Evans was hanged for the violent murder of his baby daughter; he was also assumed to have murdered his wife. Then, less than three years later, another tenant, John Christie, was found to have killed at least six women, hiding their bodies in the garden, under floorboards and in a concealed kitchen alcove. Christie followed Evans to the gallows. It seemed unlikely that two murderers were living at 10 Rillington Place, and the evidence that emerged in the Christie case eventually led to Evans receiving a pardon. But there was also circumstantial evidence that Evans had indeed killed his wife and child. Crime student Edna Gammon firmly believes that Evans was guilty. In *A House To Remember*, she explains why.

Baseball Haiku: The Best Haiku Ever Written about the Game Nanae Tamura 2007-04-17 Presenting more than two hundred of the greatest haiku ever written about the game. There are moments in every baseball game that make fans catch their breath: the pause while a pitcher looks in for the sign, the moment a cocksure rookie gets picked off first, or the instant a batter lashes a game-winning homer into the night sky, just before the sell-out crowd explodes onto its feet. Haiku captures these moments like no other poetic form, and *Baseball Haiku* captures the sights, the sounds, the smells, and the emotions of the game like no previous collection. Some of the most important haiku poets of both America and Japan are featured in this anthology; including Jack Kerouac, a longtime baseball fan who pioneered English-language haiku; Alan Pizzarelli, one of the top American haiku and senryu poets of the last thirty years; and Masaoka Shiki, one of the four great pillars of Japanese haiku—a towering figure—who was instrumental in popularizing baseball in Japan during the 1890s. With over two hundred poems spanning more than a century of ball playing, *Baseball Haiku* reveals the intricate ways in which this enduring and indelible sport—which is played on a field, under an open sky—has always been linked to nature and the seasons. And just as a haiku happens in a timeless now, so too does *Baseball Haiku* evoke those unforgettable images that capture the actions and atmospheres of the national pastime: each poem resonates like the lonely sound of cleats echoing in the tunnel as a grizzled veteran leaves his final game. The largest collection of haiku and senryu on baseball ever assembled, *Baseball Haiku* is an extraordinary treasure for any true baseball fan.

Global Capitalism and American Empire Leo Panitch 2004

This thoughtful reflection on capitalism, hegemony, and the United States addresses such questions as "What does imperialism mean today? How does the United States influence the rest of the world? and "What are the economic interests served by its domination? Explored is how the rise of the United States as a superpower brought an end to the old inter-imperial rivalries. Also discussed is the Bretton Woods system in the 1970s, and how American hegemony, far from being fundamentally challenged by the other advanced capitalist states, came to be reconstituted in the form of global neoliberalism. The challenges America faces in the future in nation building and shaping a global agency are also addressed.
Community Rehabilitation in Neurology Michael P. Barnes 2003-09-04 Rehabilitation should not stop when the disabled person is discharged from hospital, and many neurological patients require ongoing rehabilitation in order to maximize their functional abilities, minimize complications and promote full participation at home and in the community. This book analyses community rehabilitation needs from many different perspectives, including the views of disabled people, rehabilitation clinicians and service providers. Many examples of community rehabilitation schemes are presented, with evidence for their effectiveness, and case studies are used to highlight the main issues. The authors take an international view, and there are chapters dealing with the disabled child in the community and with neuropsychological rehabilitation. This important book examines the growing trend towards community rehabilitation in neurology and is directed towards all clinicians involved with neurorehabilitation.

Internal Combustion Engines Institution of Mechanical Engineers 2014-10-10 This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine

experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Economies of Destruction David R. Fontijn 2020 Why do people destroy objects and materials that are important to them? This book aims to make sense of this fascinating, yet puzzling social practice by focusing on a period in history in which such destructive behaviour reached unseen heights and complexity: the Bronze Age and Early Iron Age in Europe (c. 2300-500 BC). This period is often seen as the time in which a 'familiar' Europe took shape due to the rise of a metal-based economy. But it was also during the Bronze Age that massive amounts of scarce and recyclable metal were deliberately buried in the landscape and never taken out again. This systematic deposition of metalwork sits uneasily with our prevailing perception of the Bronze Age as the first 'rational-economic' period in history -

and therewith - of ourselves. Taking the patterned archaeological evidence of these seemingly un-economic metalwork depositions at face value, it is shown that the 'un-economic' giving-up of metal valuables was an integral part of what a Bronze Age 'economy' was about. Based on case studies from Bronze Age Europe, this book attempts to reconcile the seemingly conflicting political and cultural approaches that are currently used to understand this pivotal period in Europe's deep history. It seems that to achieve something in society, something else must be given up. Using theories from economic anthropology, this book argues that - paradoxically - giving up that which was valuable created value. It will be invaluable to scholars and archaeologists interested in the Bronze Age, ancient economies, and a new angle on metalwork depositions. **Teaching U.S. History Beyond the Textbook** Yohuru Rashied Williams 2008-11-11 Aligned with national standards, these strategies and sample lessons turn learners into history detectives as they solve historical mysteries, prepare arguments for famous cases, and more.

Economic Analysis of Projects Lyn Squire 1975 A general approach to economic analysis of projects is presented, including the basic notions of cost-benefit analysis in the context of project analysis. A systematic and consistent estimation and application of shadow prices is needed, and suggestions are made for incorporating distributional effects, as well as the customary efficiency components, into shadow prices. Social rates of return can then be calculated, taking into account the distributional impact of various projects, an aspect ignored in the usual economic rates of return as derived from efficiency prices. Shadow prices are derived to reflect a wide range of economic conditions and value judgments concerning basic policy objectives pertaining to growth and distribution. Uncertainty, sensitivity, and risk must also be evaluated in project analysis. An appendix addresses the technical derivation of shadow prices.
