It explains the present situation in many secondary schools and the challenges which are faced by teachers, students and their parents. It aligns the power of translanguaging with cognitive psychologists' theories of effective learning. Pedagogy in Higher Education Gordon Wells 2013-11-18 What can Cultural Historical Activity Theory (CHAT) contribute to the solution of the problems facing higher education today? This edited volume brings together the work of an international group of scholars and researchers to address this important question. Drawing on contemporary interpretations of CHAT, the contributors take on a wide range of issues, ranging from pedagogy to administration and from teacher preparation to university outreach. An introduction presents the key principles of CHAT.

Subsequent chapters address such issues as effective ways of teaching large undergraduate classes, providing support for struggling writers or for students with disabilities, opening up opportunities for students from historically underserved communities, preparing students for the professions, and building bridges between higher education and the wider community. Readers with an interest in higher education will encounter ideas in these chapters that will prompt them to rethink their role in preparing today's students for tomorrow's challenges.

Data Cultures in Higher Education Juliana E. Raffaghelli 2023-03-07 This collection focuses on the role of higher education institutions concerning datafication as a complex phenomenon. It explores how the universities can develop data literac(ies) shaping tomorrow skills and "formae mentis" to face the most deleterious effects of datafication, but also to engage in creative and constructive ways with data. Notably, the book spots data practices within the two most relevant sides of academics' professional practice, namely, research and teaching. Hence, the collection seeks to reflect on faculty's professional learning about data infrastructures and practices. The book draws on a range of studies covering the higher education response to the several facets of data in society, from data surveillance and the algorithmic control of human behaviour to empowerment through the use of open data. The research reported ranges from literature overviews to multi-case and in-depth case studies illustrating institutional and educational responses to different problems connected to data. The ultimate intention is to provide conceptual bases and practical examples relating to universities' faculty development policies to overcome data practices and discourses' fragmentation and contradictions: in a nutshell, to build "fair data cultures" in higher education.

Making a Difference? Susanna Price 2015-01-01 Social assessment for projects in China is an important emerging field. This collection of essays – from authors whose formative work has influenced the policies that shape practice in development-affected communities – locates recent Chinese experience of the development of social assessment practices (including in displacement and resettlement) in a historical and comparative perspective. Contributors – social scientists employed by international development banks, national government agencies, and sub-contracting groups – examine projects from a practitioner's perspective. Real-life experiences are presented as case-specific praxis, theoretically informed insight, and pragmatic lessons-learned, grounded in the history of this field of development practice. They reflect on work where economic determinism reigns supreme, yet project failure or success often hinges upon sociopolitical and cultural factors.

Fifty Years of Evolution in Biological Research Jacques Balthazart 2023-08-31 Research in biology and all basic sciences has undergone profound transformations in recent decades. We have seen the development of extremely sophisticated techniques, allowing us to study, in an objective manner, questions that were still considered science fiction at the end of the 20th century. All of this has allowed us to develop an in-depth knowledge of vast subjects, such as the biology of the brain, for example. Fifty Years of Evolution in Biological Research presents a panorama of these different technical advances. However, at the same time, there has been an increase in the number of constraints on researchers, a monetization of research and a correlative pressure to continually publish in more prestigious journals. This has resulted in a certain degradation of the quality of research activity. This book analyzes this evolution and proposes solutions.

Reculturing Museums Doris B. Ash 2022-02-28 *Reculturing Museums* takes a unified sociocultural theoretical approach to analyze the many conflicts museums experience in the 21st century. Embracing conflict, Ash asks: What can practitioners and researchers do to create the change they want to see when old systems remain stubbornly in place? Using a unified sociocultural, cultural-historical, activity-theoretical approach to analyzing historically bound conflicts that plague museums, each chapter is organized around a central contradiction, including finances ("Who will pay for museums?"), demographic shifts ("Who will come to museums?"), the roles of narratives ("Whose story is it?"), ownership of objects ("Who owns the artifact?"), and learning and teaching ("What is learning and how can we teach equitably?"). The reculturing stance taken by Ash promotes social justice and equity, 'making change' first, within museums, called inreach, rather than outside the museum, called outreach; challenges existing norms; is sensitive to neoliberal and deficit ideologies; and pays attention to the structure agency dialectic. *Reculturing Museums* will be essential reading for academics, students, museum practitioners, educational researchers, and others who care about museums and want to ensure that all people have equal access to the activities, objects, and ideas residing in them.

The Practice of Teachers Professional Development Helen Grimmett 2014-07-11 This book uses Vygotsky's cultural-historical theory to provide a unique theorisation of teachers' professional development as a practice. A practice can be described as the socially structured actions set up to produce a product or service aimed at meeting a collective human need. In this case, collaborative, interventionist work with teachers in two different Australian primary schools sought to simultaneously identify, understand and develop the necessary conditions for supporting the teachers' development as professionals. The in-depth analysis of this practice provides interesting insight into professional development for teachers at all levels of schooling, and provides strong support for educational researchers, administrators and consultants to reconsider many existing forms of professional learning/development programs. This book supports the contemporary view that professional learning must take place with teachers, rather than be delivered to teachers, but provides an important expansion to current work in this area by arguing that a focus on teachers' learning of new strategies and principles may still fall short of creating long term change in teachers' professional practice. By taking a cultural-historical approach, the focus moves to supporting teachers' development of unified concepts (the intertwining of theoretical and practical aspects) and motives to continue their ongoing development as professionals. This emphasis builds teachers' capacity to examine and disrupt habitual practices and understand, create and implement thoughtful and sustainable transformations in all areas of their professional life. This book therefore builds upon the ongoing conversation about professional learning and development, offering a new framework for researching, understanding and developing this critical practice.

However, developing countries generate two to three times more waste, resort to open dumps more often than developed countries, and are slower to integrate waste management standards. There is a need for studies that examine the waste generation and practices of countries that share similar economic backgrounds as they strive to implement successful waste management techniques. Sustainable Waste Management Challenges in Developing Countries is an essential reference source that discusses the challenges and strategies of waste management practices and the unique waste issues faced by developing countries that prevent them from achieving the goal of integrated waste management. While highlighting topics including e-waste, transboundary movement, and consumption patterns, this book is ideally designed for policymakers, legislators, waste company managers, environmentalists, students, academicians, and municipal planners seeking current research on the global waste management problem.

Rough Draft Amy J. Rutenberg 2019-09-15 *Rough Draft* draws the curtain on the race and class inequities of the Selective Service during the Vietnam War. Amy J. Rutenberg argues that policy makers' idealized conceptions of Cold War middle-class masculinity directly affected whom they targeted for conscription and also for deferment. Federal officials believed that college educated men could protect the nation from the threat of communism more effectively as civilians than as soldiers. The availability of deferments for this group mushroomed between 1945 and 1965, making it less and less likely that middle-class white men would serve in the Cold War army. Meanwhile, officials used the War on Poverty to target

poorer and racialized men for conscription in the hopes that military service would offer them skills they could use in civilian life. As Rutenberg shows, manpower policies between World War II and the Vietnam War had unintended consequences. While some men resisted military service in Vietnam for reasons of political conscience, most did so because manpower policies made it possible. By shielding middle-class breadwinners in the name of national security, policymakers militarized certain civilian roles—a move that, ironically, separated military service from the obligations of masculine citizenship and, ultimately, helped kill the draft in the United States.

The Oxford Handbook of Industrial Policy Arkebe Oqubay 2020-10-20 Industrial policy has long been regarded as a strategy to encourage sector-, industry-, or economy-wide development by the state. It has been central to competitiveness, catching up, and structural change in both advanced and developing countries. It has also been one of the most contested perspectives, reflecting ideologically inflected debates and shifts in prevailing ideas. There has lately been a renewed interest in industrial policy in academic circles and international policy dialogues, prompted by the weak outcomes of policies pursued by many developing countries under the direction of the Washington Consensus (and its descendants), the slow economic recovery of many advanced economies after the 2008 global financial crisis, and mounting anxieties about the national consequences of

globalization. The Oxford Handbook of Industrial Policy presents a comprehensive review of and a novel approach to the conceptual and theoretical foundations of industrial policy. The Handbook also presents analytical perspectives on how industrial policy connects to broader issues of development strategy, macro-economic policies, infrastructure development, human capital, and political economy. By combining historical and theoretical perspectives, and integrating conceptual issues with empirical evidence drawn from advanced, emerging, and developing countries, The Handbook offers valuable lessons and policy insights to policymakers, practitioners and researchers on developing productive transformation, technological capabilities, and international competitiveness. It addresses pressing issues including climate change, the gendered dimensions of industrial policy, global governance, and technical change. Written by leading international thinkers on the subject, the volume pulls together different perspectives and schools of thought from neo-classical to structuralist development economists to discuss and highlight the adaptation of industrial policy in an ever-changing socio-economic and political landscape.
