Schools and Schooling in the Digital Age

Neil Selwyn 2010-10-07 This book presents a wide-ranging and critical exploration of a topic that lies at the heart of contemporary education. The use of digital technology is

now a key feature of schools and schooling around the world. Yet despite its prominence, technology use continues to be an area of education that rarely receives sustained critical attention and thought, especially from those people who are most involved and affected by it.

Technology tends to be something that many teachers, learners, parents, policy-makers and even academics approach as a routine rather than reflective matter. Tackling the wider picture, addressing the social, cultural, economic, political and commercial aspects of schools and schooling in the digital age, this book offers to make sense of what happens, and what does not happen, when the digital and the educational come together in the new guise of

schools technology. In particular, the book examines contemporary schooling in terms of social justice, equality and participatory democracy. Seeking to re-politicise an increasingly depoliticised area of educational debate and analysis, setting out to challenge the many contradictions that characterise the field of education technology today, the author concludes by suggesting what forms schools and schooling in the digital age could, and should, take. This is the perfect volume for anyone interested in the application and use of technology in education, as well as the education policy and politics that surround it; many will also find its innovative proposals for technology use an inspiration for their own teaching and

The Years of Alienation in Italy

Alessandra Diazzi 2019-06-11 The Years of Alienation in Italy offers an interdisciplinary overview of the socio-political, psychological, philosophical, and cultural meanings that the notion of alienation took on in Italy between the 1960s and the 1970s. It addresses alienation as a social condition of estrangement caused by the capitalist system, a pathological state of the mind and an ontological condition of subjectivity.

Contributors to the edited volume explore the pervasive influence this multifarious concept had on literature, cinema, architecture, and photography in Italy.

Art and Representation

John Willats 1997 In Art and Representation, John Willats presents a radically new theory of pictures. To do this, he has developed a precise vocabulary for describing the representational systems in pictures: the ways in which artists, engineers, photographers, mapmakers, and children represent objects. His approach is derived from recent research in visual perception and artificial intelligence, and Willats begins by clarifying the key distinction between the marks in a picture and the features of the scene that these marks represent. The methods he uses are thus closer to those of a modern structural linguist or psycholinguist than to those of an art historian. Using over 150 illustrations,

Willats analyzes the components of the Montare Il Pc Da Soli Pdf upload Mia x Boyle

representational systems in pictures by artists from a wide variety of periods and cultures. He then relates these systems to the mental processes of picture production, and, displaying an impressive grasp of more than one scholarly discipline, shows how the Greek vase painters, Chinese painters, Giotto, icon painters, Picasso, Paul Klee, and David Hockney have put these systems to work. But this book is not only about what systems artists use but also about why artists from different periods and cultures have used such different systems, and why drawings by young children look so different from those by adults. Willats argues that the representational systems can serve many different functions beyond that of merely providing a convincing illustration.

Downloaded from vla.ramtech.uri.edu on September 29, 2023 by Mia x Boyle

These include the use of anomalous pictorial devices such as inverted perspective, which may be used for expressive reasons or to distance the viewer from the depicted scene by drawing attention to the picture as a painted surface. Willats concludes that art historical changes, and the developmental changes in children's drawings, are not merely arbitrary, nor are they driven by evolutionary forces. Rather, they are determined by the different functions that the representational systems in pictures can serve. Like readers of Ernst Gombrich's famous *Art and Illusion* (still available from Princeton University Press), on which *Art and Representation* makes important theoretical advances, or Rudolf Arnheim's *Art and Visual*

discusses new media's reliance on conventions of old media, such as the rectangular frame and mobile camera, and shows how new media works create the illusion of reality, address the viewer, and represent space. He also analyzes categories and forms unique to new media, such as interface and database. Manovich uses concepts from film theory, art history, literary theory, and computer science and also develops new theoretical constructs, such as cultural interface, spatial montage, and cinegratography. The theory and history of cinema play a particularly important role in the book. Among other topics, Manovich discusses parallels between the histories of cinema and of new media, digital cinema, screen

and in new media, and historical ties between avant-garde film and new media.

The Italian Renaissance State Andrea Gamberini

2012-03-29 This magisterial study proposes a revised and innovative view of the political history of Renaissance Italy. Drawing on comparative examples from across the peninsula and the kingdoms of Sicily, Sardinia and Corsica, an international team of leading scholars highlights the complexity and variety of the Italian world from the fourteenth to early sixteenth centuries, surveying the mosaic of kingdoms, principalities, signorie and republics against a backdrop of wider political themes common to all types of state in the period. The authors address the contentious problem of the

weakness of the Italian Renaissance political system. By repositioning the Renaissance as a political, rather than simply an artistic and cultural phenomenon, they identify the period as a pivotal moment in the history of the state, in which political languages, practices and tools, together with political and governmental institutions, became vital to the evolution of a modern European political identity.

Why do women respond so differently to becoming a mother in England from the way they do in Trinidad? How are values such as carnival and suburbia expressed visually? Based on an examination of over 20,000 images, the authors argue that phenomena such as selfies and memes must be analysed in their local context. Asylums Erving Goffman from via.ramtech.uri.edu on September 29, 2023 by Mia x Boyle

2017-09-08 A total institution is defined by Goffman as a place of residence and work where a large number of like-situated, individuals, cut off from the wider society for an appreciable period of time, together lead an enclosed, formally administered round of life. Prisons serve as a clear example, providing we appreciate that what is prison-like about prisons is found in institutions whose members have broken no laws. This volume deals with total institutions in general and, mental hospitals, in particular. The main focus is, on the world of the inmate, not the world of the staff. A chief concern is to develop a sociological version of the structure of the self. Each of the essays in this book were intended to focus on the

situation in an institutional context. Each chapter approaches the central issue from a different vantage point, each introduction drawing upon a different source in sociology and having little direct relation to the other chapters. This method of presenting material may be irksome, but it allows the reader to pursue the main theme of each paper analytically and comparatively past the point that would be allowable in chapters of an integrated book. If sociological concepts are to be treated with affection, each must be traced back to where it best applies, followed from there wherever it seems to lead, and pressed to disclose the rest of its family.

building situated on the peninsula of Posillipo, Pica Ciamarra Associati (www.pcaint.eu) has acted as a laboratory of architectural and urban design which has gradually incorporated new members and new energies over the time: using a multidisciplinary approach, the roots of the architectural practice lie in the intensive theoretical and practical work begun in the early 1960s by Massimo Pica Ciamarra. Since then the practice has been marked by a continuous relationship with Le Carré Bleu Feuille internationale d'architecture and leading members of the cultural milieu of Team 10: this has led to constant attention to everything that lies beyond form, to the relationship with contexts that also

contexts, and to high levels of integration and dialectical discussion. According to Pica Ciamarra Associati, a design transcends the approaches of a single sector, providing simultaneous solutions to contradictory requirements, combining utopia and practicality. The poetics of the fragment: it mediates between architecture and the urban dimension; some designs also have the aim of becoming absorbed within a context as 'informed fragments'. This monograph is the result of an intensive period of work and consists of two interacting parts. It stems from research into the archive of the studio Pica Ciamarra and conversation with the members of the architectural practice.

Organised diachronically, the book tells the long story of

unfolding over a period of over fifty years of a team of Neapolitan architects and designers, who have maintained the lively spirit of the practice which is still geared towards the future. The textual and iconographic account tells a story and offers an interpretation that highlight the vibrant atmosphere of the studio, based on a consistency of thought and action, and fuelled by an interest in many different forms of knowledge. The contextualisation of the events related to the studio, as they unfolded over time, is wide-ranging, coherent and connotative. disseminate the importance of history which can embracing innovation and tradition to an equal degree, forming a new architectural language. According to her view of architecture, history and design are closely connected, a 'single entity' as is reflected by her career. Since the 1980s, her academic work has gained increasing importance, a way of avoiding narrow sectoral approaches in the training of future architects, offering a holistic stance of the history of architecture and an architecture that contributes to shaping critical thought and a thriving cultural life.

university psychology study that asks the simple question: Can love be engineered? The study consists of 36 questions, ranging from "What is your most terrible memory?" to "When did you last sing to yourself?" By the time Hildy and Paul have made it to the end of the questionnaire, they've laughed and cried and lied and thrown things and run away and come back and driven each other almost crazy. They've also each discovered the painful secret the other was trying so hard to hide. But have they fallen in love? Told in the language of modern romance -- texting, Q&A, IM -- and punctuated by Paul's sketches, this clever high-concept YA is full of humor and heart. As soon as you've finished reading, you'll be searching for your own stranger

Networked Lee Rainie 2014-02-14 How social networks, the personalized Internet, and always-on mobile connectivity ~~are~~ downloaded from vla.ramtech.uri.edu on September 29, 2023 by Mia x Boyle

transforming—and expanding—social life. Daily life is connected life, its rhythms driven by endless email pings and responses, the chimes and beeps of continually arriving text messages, tweets and retweets, Facebook updates, pictures and videos to post and discuss. Our perpetual connectedness gives us endless opportunities to be part of the give-and-take of networking. Some worry that this new environment makes us isolated and lonely. But in *Networked*, Lee Rainie and Barry Wellman show how the large, loosely knit social circles of networked individuals expand opportunities for learning, problem solving, decision making, and personal interaction. The new social operating system of “networked individualism” liberates

of tightly knit groups; it also requires us to develop networking skills and strategies, work on maintaining ties, and balance multiple overlapping networks. Rainie and Wellman outline the “triple revolution” that has brought on this transformation: the rise of social networking, the capacity of the Internet to empower individuals, and the always-on connectivity of mobile devices. Drawing on extensive evidence, they examine how the move to networked individualism has expanded personal relationships beyond households and neighborhoods; transformed work into less hierarchical, more team-driven enterprises; encouraged individuals to create and share content; and changed the way people obtain information.

Wellman guide us through the challenges and opportunities of living in the evolving world of networked individuals. The essays in *Hypermedia and Literary Studies* discuss the theoretical and practical opportunities and challenges posed by the convergence of hypermedia systems and traditional written texts. Consider a work from Shakespeare.

Imagine, as you read it, being able to call up instantly the Elizabethan usage of a particular word, variant texts for any part of the work, critical commentary, historically relevant facts, or oral interpretations by different sets of actors. This is the sort of richly interconnected, immediately accessible literary universe that can be created by

hypertext (electronically linked texts) and hypermedia (the extension of linkages to visual and aural material). The essays in *Hypermedia and Literary Studies* discuss the theoretical and practical opportunities and challenges posed by the convergence of hypermedia systems and traditional written texts. They range from the theory and design of literary hypermedia to reports of actual hypermedia projects from secondary school to university and from educational and scholarly to creative applications in poetry and fiction.
