In the first kind of investigation, you can detect entities in your body, taken as a whole. For example, mercury aflatoxin, Streptococcus pneumonia, Epstein Barre virus, orthophosphotyrosine, benzene. Such a test is not as sensitive as the organ test, described next, but for this reason allows you to select those entities most abundant in the body and therefore of special significance; in the second, you can identify which organs contain a particular entity. For example, the mercury may be in the kidney, the Streptococcus in the joints, and so on. This allows you to embark on a cleanup program for your body in a focused way. The synchrometer lets you monitor your progress. And finally, you can detect entities in products. For example, lead in your household water, thulium in your reverse osmosis water, asbestos in your sugar.

There is not a single doubt that man has made it into space.However, there is much doubt as to whether any man has ever gone beyond the radiation shield provided by the Van Allen Belt, which completely surrounds the planet.As the reader will learn from the chapter titled "Sunstroke," once beyond that Van Allen shield, space is riven with deadly radiation from the sun and other galactic bodies."NASA Mooned America!" is a unique book, and as such, it requires a different format.
