Careers in Dentistry Institute for Career Research 2016-01-03 MOST PEOPLE DO NOT LOOK FORWARD to visiting the dentist. Many avoid it as long as possible. Yet those same people will leave the dentist's office relieved, often with big smiles (assuming the Novocain has worn off). What most people do not realize is that the profession of dentistry has come a long way in recent years. New techniques and technologies such as lasers and air abrasion devices have changed the way dentists treat patients. A visit no longer has to be a source of dread. Dentistry involves more than just teeth alone. A dentist provides healthcare for the oral cavity, including soft tissue and bone, as well as the associated head and neck region. A typical dentist visit starts with an examination of the patient's teeth and mouth tissue. Based on what the dentist finds, a diagnosis is made and a treatment plan is proposed. Treatment may include removing tooth decay, filling cavities, repairing damaged teeth,

extracting teeth, and/or replacing lost teeth. Most dentists are generalists who provide a wide array of services. On a given day, a general dentist will see people of all ages and backgrounds - sometimes entire families. There is never a dull moment because dentists never know who will be in the examining room, or what they will need. A patient could just be there for a checkup and cleaning. In that case, the dental hygienist on staff will take care of the cleaning, and the dental assistant will take a set of x-rays. The dentist will look at the x-rays in search of problems that need to be addressed right away or point out possible problems that need to be watched. The next patient could be suffering from a damaged tooth, broken during a fall. The dentist will need to determine if and how the tooth can be saved, and provide immediate treatment. There are also dentists who practice in certain specialized areas of dentistry. There are nine specialties recognized by the American Dental Association (ADA). Each requires additional training, but the payoff is a higher than average income for the licensed specialist. The most popular specialties are orthodontics (teeth straightening) and prosthodontics (artificial teeth). Dentists are highly educated professionals. It takes four years of undergraduate studies as a pre-dental student, followed by another four years in dental school. In order to get into dental school, the applicant must first take the Dental Acceptance Test (DAT) by their junior year in college. Getting into dental school is competitive so scoring well on the test is important. Many students take practice tests, sometimes as early as high school. Dental school is a rigorous mix of classroom instruction and hands-on clinical work. Upon graduation, dentists need to obtain a license to practice. Specific licensure requirements vary by state. Newly minted dentists can look forward to one of the best careers available today. They are well compensated with a median annual income of \$150,000. Even those starting out can expect to earn at least \$65,000 in their first year of practice. Those who take the time to become specialists can earn more than \$180,000. Dentistry is also a stable career with more opportunities than the available dentists can fill. There is a growing demand for dentists that is not expected to slow down any time soon. Perhaps most important of all is the agreeable work-life balance dentists

enjoy. Most dentists work in private practice and can decide for themselves how much they want to work. Dentistry is one of the few professional careers that actually offers the chance to work part time without losing traction. If you have an interest in healthcare, and like to work with your hands as well as your mind, dentistry is worth a look.

Temporomandibular Disorders Enriqueta C. Bond 2020

Temporomandibular disorders (TMDs), are a set of more than 30 health disorders associated with both the temporomandibular joints and the muscles and tissues of the jaw. TMDs have a range of causes and often co-occur with a number of overlapping medical conditions, including headaches, fibromyalgia, back pain and irritable bowel syndrome. TMDs can be transient or long-lasting and may be associated with problems that range from an occasional click of the jaw to severe chronic pain involving the entire orofacial region. Everyday activities, including eating and talking, are often difficult for people with TMDs, and many of them suffer with severe chronic pain due to this condition. Common social activities

that most people take for granted, such as smiling, laughing, and kissing, can become unbearable. This dysfunction and pain, and its associated suffering, take a terrible toll on affected individuals, their families, and their friends. Individuals with TMDs often feel stigmatized and invalidated in their experiences by their family, friends, and, often, the health care community. Misjudgments and a failure to understand the nature and depths of TMDs can have severe consequences -- more pain and more suffering -- for individuals, their families and our society.

Temporomandibular Disorders: Priorities for Research and Care calls on a number of stakeholders -- across medicine, dentistry, and other fields -- to improve the health and well-being of individuals with a TMD. This report addresses the current state of knowledge regarding TMD research, education and training, safety and efficacy of clinical treatments of TMDs, and burden and costs associated with TMDs. The recommendations of Temporomandibular Disorders focus on the actions that many organizations and agencies should take to improve TMD research and care and improve the overall health and well-being of individuals with a TMD.

Dr. Hafez started teaching AFK lectures in 2013 with amazing feedback from students. Dr. Hafez's main strength is his ability to break down complicated concepts and then teach it in a simple way. His understanding of the obstacles a foreign trained dentist must overcome to pass the AFK exam is a great benefit to all of his students. Dr. Hafez has been working as a licensed dentist in Canada since January 2014, with experience in private practice and community health centers. Dr. Hafez continues to be a student of dentistry, and has taken multiple continuing education courses in fields of sedation, oral surgery, occlusion, periodontics, cosmetic dentistry and implantology.
