Textbook of Nutrition in Health and Disease Kaveri Chakrabarty 2020-02-27 This textbook offers a concise, yet comprehensive account of human nutrition, food and nutrition-related health problems, based on the curricula of top universities around the globe. Nutrition is a multidisciplinary science, and as such, the book discusses various aspects of physiology, biochemistry, pathology, immunology, medicine, food science, and other fields related to nutrition, it focuses on the role of nutrition in the maintenance of health. The various chapters explore highly relevant issues, such as, addiction-related health problems, lifestyle-related disorders, social health problems and poor-maintenance of food hygiene and food safety. It also addresses the role of nutritional therapies for mental disorders, and includes an integrated perspective on cognition, oxidative stress and nutritional interventions in aging. Other topics include, the role of gut microbiota on human health, nutraceuticals as therapeutic agents and ketogenic diets. It also highlights malnutrition (protein energy malnutrition, starvation, malabsorption syndrome, eating disorders and overnutrition/obesity) and adipose tissue as an active endocrine organ. Moreover, it examines key concepts concerning the role of vitamins in the citric acid cycle (gluconeogenesis, ketogenesis, oxidative deamination and transamination) and precursors of coenzymes, as well as calorogenic hormones, appetite-stimulating/appetite-inhibiting hormones, anabolic and catabolic hormones affecting protein metabolism, and lipogenetic/lipolytic hormones.

Treatment and Disposal of Solid and Hazardous Wastes Debashish Sengupta 2022-03-13 Interest in solid and hazardous waste management is relatively recent, i.e., in the last three decades, and is driven by regulations in most countries. It began with industrial hazardous waste followed by municipal solid waste, and subsequently by many other categories of waste. This book presents numerous examples and case studies of innovative tools, treatment methods and applications in this growing area of research and development. It describes in detail laboratory methods of measuring the biodegradation of specific organic fractions, like floral waste, and also discusses the treatment of yard and food waste by anaerobic digestion and landfill leachate using

constructed wetlands. Case studies are provided that show how remote sensing (RS) and GIS were used to develop an integrated solid waste management plan for a city and to evaluate the environmental impacts of stone quarrying activities. The book also features chapters discussing the implications of natural radioactivity in beach placers and their impact on groundwater and other parts of the environment, as well as the twelve principles of green chemistry and their application in the reuse and recycling of solid waste. Moreover, it includes examples of waste to energy, like refuse derived fuel and biofuel generation and an evaluation of their potential, and covers topics such as life cycle assessment as a tool for developing integrated solid waste management systems and an overview of municipal solid waste management rules, illustrating the importance of technological inputs in the development of regulatory frameworks. Written by leading practitioners and scholars in the field, the book enables readers to understand and apply these principles and practices in their endeavours.

Ethnic Fermented Foods and Beverages of India: Science History and Culture Jyoti Prakash Tamang 2020-03-02 This book provides detailed information on the various ethnic fermented foods and beverages of India. India is home to a diverse food culture comprising fermented and non-fermented ethnic foods and alcoholic beverages. More than 350 different types of familiar, less-familiar and rare ethnic fermented foods and alcoholic beverages are traditionally prepared by the country's diverse ethnic groups, and include alcoholic, milk, vegetable, bamboo, legume, meat, fish, and cereal based beverages. Most of the Indian ethnic fermented foods are naturally fermented, whereas the majority of the alcoholic beverages have been prepared using dry starter culture and the 'back-sloping' method for the past 6,000 years. A broad range of culturable and unculturable microbiomes and mycobiomes are associated with the fermentation and production of ethnic foods and alcoholic drinks in India. The book begins with detailed chapters on various aspects including food habits, dietary culture, and the history, microbiology and health benefits of fermented Indian food and beverages. Subsequent chapters describe unique and region-specific ethnic fermented foods and beverages from all 28 states and 9 union territories. In turn the classification of various ethnic fermented foods and beverages, their traditional methods of preparation, culinary practices and mode of consumption, socio-economy, ethnic values, microbiology, food safety, nutritional value, and process optimization in some foods are discussed in details with original pictures. In closing, the book addresses the medicinal properties of the fermented food products and their health benefits, together with corresponding safety regulations.

Plants and Phytomolecules for Immunomodulation Neelam S. Sangwan 2022-08-30 This book describes the process of immunomodulation and the plants which possess immunomodulation properties to boost the immune system. The immunomodulation process is highly relevant to address emerging as well as existing diseases in humans. A better immune system triggers the cellular responses for neutralizing and combating the onset of disease conditions. Chapters in the book discuss plants that have profound effects on the health and well-being of humans. They discuss the natural phytochemicals that have immense diversity and uniqueness of molecules. Molecules belonging to phenylpropanoids, terpenoids, steroids, alkaloids, and tannins etc possess a variety of pharmacological activities. The chapters describe how bioactive exert effects even when taken as part of the diet, supplement, and or as traditional herbal medicine. This book provides up-to-date scientific knowledge about the activities and mechanisms and leads in the area of medicinal plants and phytochemicals with immunomodulation properties. This book is meant for students, academics, researchers, and industry professionals interested in pharmacology, immunology, and plant secondary metabolites.
