Child Health Psychology Julie Turner-Cobb 2013-12-06 Child Health Psychology: A Biopsychosocial Perspective is the first sole-authored textbook dedicated to the topic of health psychology as it applies to children and adolescents, drawing on research from several related disciplines including psychoneuroimmunology and developmental psychobiology. With an overarching biopsychosocial lifespan perspective, Turner-Cobb examines the effects of early life experience on health outcomes, as well as covering the experience of acute and chronic illness during childhood. Lots of helpful aids are provided per chapter including key learning objectives, textboxes putting spotlights on key pieces of

research, lists of key concepts to revise, useful websites and further reading suggestions. With a perspective designed to both inform and to challenge, this stimulating textbook will introduce you to the central relevance and many applications of child health psychology. It will be of interest to final year undergraduate and postgraduate students in health and clinical psychology, as well as to students in health sciences, nursing, and childhood studies. Lecturers/instructors - request a free digital inspection copy here

Biopsychosocial Perspectives on Arab Americans Sylvia C. Nassar 2023-08-01 The biopsychosocial study of Arab Americans yields compelling insights into innovative theoretical and applied initiatives. In

the context of a growing population of Arab Americans, coupled with the current tenure of xenophobia and exposed structural racism in the US, clinical and community practitioners must be attuned to their clients of Arab ancestry, whose experiences, development, and health concerns are distinctly different than that of their White counterparts. This second edition, with its uniquely interwoven sections of culture, psychosocial development, and health and disease, provides a rich overview of timely, critical topics. The audience for the text includes counselors, social workers, psychologists, nurses, psychiatrists, sociologists, and any other public and mental health practitioners, researchers, and policy makers who work with and on behalf of clients and patients of Arab descent. The authors represent a team of leading experts spanning disciplines of sociology, clinical mental health, and community public health. "This edition draws on leading experts in Arab American health and sociology who document the complexity of this population's immigration and acculturation experience. It offers critical and current research that speaks to the centrality of context and diversity in treating Americans of Arab descent. Contributors explore the complex and limited racial framework within which Arabs in the U.S. form their identities, and the impact of structural racism on their lives and health. This collection offers practitioners much needed insights on a population often hidden or rendered invisible by data limitations, and yet misrepresented by cultural stereotypes." Helen Hatab Samhan, Former Executive Director, Arab American Institute/Foundation. "Nassar, Ajrouch, Hakim-Larson, and Dallo's breakthrough work in the area of culturally competent health care has been inspiring across interdisciplinary fields and to the communities they serve. Their work on Arab American health issues, in particular, has greatly improved clinical practice at the community and national levels. I heartily recommend taking the time to become familiar with their important body of work and this latest text." Ismael Ahmed, Former Michigan State Director of Health and Human Services.

The Behavioral Sciences and Health Care Olle Jane Z. Sahler 2017-08-25 Behavioral sciences for the next generation of health care providers – including practical features such as chapter review questions and an annotated practice exam. The fourth edition of *The Behavioral Sciences and Health Care* is an invaluable resource for those educating the next generation of physicians and other health care providers. This easy-to-use text presents succinct information about a wide variety of neurological, social, and psychological sciences from a unified perspective of the complex evolutionary processes of gene-individual-environmental interaction, breathing new life into the biopsychosocial model so essential to understanding human behavior. The book is organized in sections covering Regulatory Systems, Basic and Higher Order Homeostatic Systems, Development Through the Life Cycle, Social and Cultural Issues, Societal and Behavioral Health Challenges, The Health Care System, Policy, and Economics; The Clinical Relationship; and Psychopathology. In this edition, numerous chapters have been extensively revised to include the most up-to-date information and to integrate the DSM-5 classification. A new chapter deals with pain and a new appendix on psychological testing has been added. Each chapter begins with guidance questions and ends with current recommended readings, resources, and review questions. A complete 335 question-and-answer multiple choice USMLE-type exam section not only allows readers to assess how well they have learned the material, but also highlights important points and adds additional specific information to supplement the text. This text is particularly suited for use in systems-based and casebased curricula that can be used creatively in flipped classrooms and other active learning environments. Accessible and clear, without oversimplification, the book facilitates interdisciplinary education, providing a common core of knowledge applicable in many fields, including medicine, nursing, psychology, and social work.

Health Psychology Edward P. Sarafino 2020-07-27 The second Canadian edition of *Health Psychology: Biopsychosocial Interactions* integrates multidisciplinary research and theory to help students understand the complex connections between psychology and health. This comprehensive yet accessible textbook covers the biopsychosocial factors that impact human health and wellness, placing particular emphasis on the distinctive characteristics of the Canadian health care system, the issues and challenges unique to Canadian culture, and the most recent Canadian research in the field of health psychology. Clear, student-friendly chapters examine topics such as coping with stress and illness, lifestyles for enhancing health and preventing illness, managing pain and discomfort, getting medical treatment, and living with chronic illness. This fully revised second edition features the latest available data and research from across Canada and around the world. New and expanded

chapters explore psychosocial factors in aging and dying, legalized marijuana use in Canada, the link between inflammation and depression, Canadian psychosocial models of pain, recent Medical Assistance in Dying (MAiD) legislation, weight control, eating disorders, and exercise, and much more. Throughout the text, updated illustrative examples, cross-cultural references, and real-world cases reinforce key points and strengthen student comprehension, retention, and interest.

The Biopsychosocial Model of Health and Disease Derek Bolton 2019-03-28 This open access book is a systematic update of the philosophical and scientific foundations of the biopsychosocial model of health, disease and healthcare. First proposed by George Engel 40 years ago, the Biopsychosocial Model is much cited in healthcare settings worldwide, but has been increasingly criticised for being vague, lacking in content, and in need of reworking in the light of recent developments. The book confronts the rapid changes to psychological science, neuroscience, healthcare, and philosophy that have occurred since the model was first proposed and addresses key issues such as the model's scientific basis, clinical utility, and philosophical coherence. The authors conceptualise biology and the psychosocial as in the same ontological space, interlinked by systems of communication-based regulatory control which constitute a new kind of causation. These are distinguished from physical and chemical laws, most clearly because they can break down, thus providing the basis for difference between health and disease. This work offers an urgent update to the model's scientific and philosophical foundations, providing a new and coherent account of causal interactions between the biological, the psychological and social.

Formulation and Treatment in Clinical Health Psychology Ana V. Nikcevic 2009-09-10 How do clinicians select appropriate treatment strategies to match their clients' needs? *Formulation and Treatment in Clinical Health Psychology* brings together leading experts in the fields of clinical health psychology and behavioural medicine with the aim of illustrating the formulation and treatment design procedures which they employ in their specialist areas. Each chapter covers the key biopsychosocial parameters, assessment modalities, empirically based treatment strategies and formulation procedures for specific problems. Areas covered include: cognitive-behavioural case formulation in the treatment of alcohol problems psychological treatment of hypertension cognitive therapy for irritable bowel syndrome miscarriage: conceptualisation and treatment of the psychological sequelae. Case studies are employed throughout to demonstrate a link between case formulation, treatment planning and outcome. The practical guidance provided in this volume will prove invaluable for all practising clinicians working in the context of health-related problems.

Foundations of Health Psychology Howard S. Friedman 2007 *Foundations of Health Psychology* brings together top experts to provide a much-needed conceptual base for this rapidly expanding field. Rather than take a medical model approach, the volume examines health psychology from a theoretical, conceptual, and psychological perspective. After presenting an overview of the field's history and methods, the contributors address major concepts of the biopsychosocial approach to health and then discuss applications to health promotion and effective treatment and prevention.

Applying the Roper-Logan-Tierney Model in Practice - E-Book Karen Holland 2019-03-11 New edition of a successful textbook which demonstrates the theory and practice of one of the most popular models of nursing. Karen Holland, Jane Jenkins and their colleagues carefully explain and explore how the Roper-Logan-Tierney Model can help today's student learn how to care for patients in a variety of health care contexts and use it as a framework for their nursing practice. Rich with 'real-life' case studies and thought provoking exercises, this book has a helpful problem solving approach which strongly encourages further learning and reflection. New edition of a successful textbook which explains the theory and practice of one of the most popular models of nursing Structured approach to a core range of 'activities of living' clearly illustrate how they interconnect and may be promoted, or compromised, by health and illness, and influenced by external factors Explains the theory to show how it can be applied in practice to assess, plan, deliver and evaluate individualised nursing care A helpful case study approach enables readers see how the model works in 'real life' Written by experts who actively

encourage a problem-solving approach to nursing care and practice. Additional exercises are designed to encourage further learning and reflective practice, as well as develop skills in literature searching and evidence-based care. Helpful appendices include a range of reference material such as the Care Plan Documentation and Audit Tool, Laboratory Reference Values, the Roper-Logan Tierney Assessment Schedule and other commonly used nursing documentation. Ideal for use in a variety of contemporary health care delivery environments including the acute and community-based settings.

Psychology of Health Simon George Taukeni 2019-10-30 Psychology of Health - Biopsychosocial Approach is based on the bio-psycho-social model of health, which aims to examine how biological, psychological, and social factors influence people's behavior regarding their health status. This book reflects the application of the bio-psycho-social model of health in many disciplines such as public health, psychology, psychiatric, mental health, community health, and nursing education. All the authors of this book have demonstrated how the bio-psycho-social model played an important role in addressing mental disease, tuberculosis, post-traumatic stress disorder, and obesity. This is an important book for students, academics, policy-makers, and community health practitioners.

Understanding Racial and Ethnic Differences in Health in Late Life National Research Council 2004-09-08 As the population of older Americans grows, it is becoming more racially and ethnically diverse. Differences in health by racial and ethnic status could be increasingly consequential for health policy and programs. Such differences are not simply a matter of education or ability to pay for health care. For instance, Asian Americans and Hispanics appear to be in better health, on a number of indicators, than White Americans, despite, on average, lower socioeconomic status. The reasons are complex, including possible roles for such factors as selective migration, risk behaviors, exposure to various stressors, patient attitudes, and geographic variation in health care. This volume, produced by a multidisciplinary panel, considers such possible explanations for racial and ethnic health differentials within an integrated framework. It provides a concise summary of available research and lays out a research agenda to address the many uncertainties in current knowledge. It recommends, for instance, looking at health differentials across the life course and deciphering the links between factors presumably producing differentials and biopsychosocial mechanisms that lead to impaired health.

Handbook of Health Psychology and Behavioral Medicine Jerry M. Suls 2011-07-06 What psychological and environmental forces have an impact on health? How does behavior contribute to wellness or illness? This comprehensive volume answers these questions and others with a state-of-the-art overview of theory, research, and practice at the interface of psychology and health. Leading experts from multiple disciplines explore how health and health behaviors are shaped by a wide range of psychological processes and social-environmental factors. The book describes exemplary applications in the prevention and clinical management of today's most pressing health risks and diseases, including coronary heart disease, depression, diabetes, cancer, chronic pain, obesity, sleep disturbances, and smoking. Featuring succinct, accessible chapters on critical concepts and contemporary issues, the Handbook integrates psychological perspectives with cutting-edge work in preventive medicine, epidemiology, public health, genetics, nursing, and the social sciences.

Textbook of Family Medicine E-Book Robert E. Rakel 2007-05 This text has been admired for as long as Family Medicine has been a recognized specialty. Edited by the legendary Robert E. Rakel, MD, this superb 7th edition continues to break new ground. Includes materials to help hone your clinical skills and prepare for the ABFP boards and SPEX exams. Highlights especially important points of diagnosis and therapy in the case section of book. Provides Best Evidence Recommendations boxes to promote greater reliability of information. Offers a free CD-rom containing video clips of diabetes testing, stress test and all the illustrations from the book! Contains new chapters on complementary and alternative medicine. Takes a fresh new approach to evidence based medicine in clinical practice. Uses a visually appealing, functional 4-color design and a full-color insert.

Biopsychosocial Assessment in Clinical Health Psychology Frank Andrasik 2015-01-05 Filling a key need, this practical volume provides state-of-the-art approaches and tools for evaluating both health-related behaviors and psychosocial aspects of medical illness. The book begins by presenting a comprehensive biopsychosocial assessment framework. Evidence-based strategies are described for assessing such key lifestyle factors as tobacco use, alcohol and other drugs, physical activity, and social support. Behavioral, cognitive, and emotional issues associated with a range of specific medical conditions--including cancer, cardiovascular disease, diabetes, chronic pain, and others--are addressed. Chapters on assessment of specific populations cover pediatric patients, older adults, ethnic/racial minority groups, organ transplant and bariatric surgery patients, and primary care.

Topics of interests cover all theoretical and practical aspects of nursing and health sciences in broad spectrum. This will provide an excellent knowledge and information across academicians, professionals, and government to optimize healthcare quality and safety around the globe.

The Human-Animal Bond in Clinical Social Work Practice Katherine Compitus 2021-11-12 The human-animal bond may be described as a dynamic, mutually beneficial relationship between people and the animals they care for. There are a multitude of mental and physical health benefits for people who care for animals, and animals in therapy have been shown to aid a wide range of people and illnesses. Although the benefits of animal companionship have long been suspected, little is known about the research, the process, or why it works. This book provides clinicians with a history of the human-animal bond and the rationale for incorporating animals into therapy today. In this book, the author includes a discussion of the myriad of ways that clinicians can directly help people care for their pets, such as crisis intervention services, policy issues, grief counseling for pet loss, and compassion fatigue in the veterinary profession. There also is a thorough discussion of animal-assisted therapy (AAT) as a distinct and unique modality. The adaptive nature of AAT is not only due to the symbiotic relationship between humans and animals, but also because of the flexible nature of the model; it can be used with clients of all demographics and with most mental illnesses. Research shows that the majority of mental health practitioners believe that AAT is a valid treatment modality, but AAT has not yet been manualized and clinicians are left confused about where to start. The Human-Animal Bond in Clinical Social Work Practice is a unique and essential resource that provides guidelines for developing AAT treatment plans and integrating AAT with existing therapeutic models. The book answers the questions that social workers, psychologists, psychiatrists, and other mental health counselors may have about the benefits of the human-animal bond and ways to tap into that special bond in direct practice.

The Wiley Encyclopedia of Health Psychology Lee Cohen 2020-07-13 Organized thematically as an A to Z reference encyclopedia across 4 volumes, this comprehensive resource on health psychology provides a concise overview of the ever-expanding interdisciplinary field. The first

volume of The Wiley Encyclopedia of Health Psychology covers the biological bases of health behavior, providing information on topics in the broad areas of neuroscience and biopsychology relevant to health behavior. Volume II addresses topics related to theories and data derived from social psychology including health or prevention related behaviors, stress and coping, and the design and evaluation of behavioral interventions. The third volume examines the applied aspects of the field of health psychology including practical topics that clinical health psychologists face in the workplace, issues related to unhealthy behaviors that individuals engage in, behavioral aspects of medical problems, and issues related to the comorbidity of psychiatric disorders and chronic health problems. Volume IV examines special issues in health psychology covering various historical, philosophical, and conceptual issues. It also considers issues related to diversity and underrepresented/underserved groups. As a whole, this 4-volume set: Delves into topics related to Health Psychology across the subfields of Biopsychology, Social Psychology, Clinical Psychology Appeals to the broader field of Behavioral Medicine, including medical and allied health fields Examines the interconnections between biology, psychology, and socio-environmental factors The Wiley Encyclopedia of Health Psychology is an ideal resource for college and university libraries as well as for professional psychologists and other health care professionals interested in the relationship of psychological and physical well being.

The Biopsychosocial Approach Richard M. Frankel 2003 For thousands of years, Western culture has dichotomized science and art, empiricism and subjective experience, and biology and psychology. In contrast with the prevailing view in philosophy, neuroscience, and literary criticism, George Engel, an internist and practicing physician, published a paper in the journal *Science* in 1977 entitled "The Need for a New Medical Model: A Challenge for Biomedicine." In the context of clinical medicine, Engel made the deceptively simple observation that actions at the biological, psychological, and social level are dynamically interrelated and that these relationships affect both the process and outcomes of care. The biopsychosocial perspective involves an appreciation that disease and illness do not manifest themselves only in terms of pathophysiology, but also may simultaneously affect many different levels of functioning, from cellular to organ system to person to family to society. This model provides a broader understanding of disease processes as encompassing multiple levels of functioning including the effect of the physician-patient relationship. This book, which contains Engel's seminal article, looks at the continuing relevance of his work and the biopsychosocial model as it is applied to clinical practice, research, and education and administration. Contributors include: Thomas Inui, Richard Frankel, Timothy Quill, Susan McDaniel, Ronald Epstein, Peter LeRoux, Diane Morse, Anthony Suchman, Geoffrey Williams, Frank deGruy, Robert Ader, Thomas Campbell, Edward Deci, Moira Stewart, Elaine Dannefer, Edward Hundert, Lindsey Henson, Robert Smith, Kurt Fritzsche, Manfred Cierpka, Michael Wirsching, Howard Beckman, and Theodore Brown.

Research Anthology on Mental Health Stigma, Education, and Treatment Management Association, Information Resources 2021-02-05

In times of uncertainty and crisis, the mental health of individuals become a concern as added stressors and pressures can cause depression, anxiety, and stress. Today, especially with more people than ever experiencing these effects due to the Covid-19 epidemic and all that comes along with it, discourse around mental health has gained heightened urgency. While there have always been stigmas surrounding mental health, the continued display of these biases can add to an already distressing situation for struggling individuals. Despite the experience of mental health issues becoming normalized, it remains important for these issues to be addressed along with adequate education about mental health so that it becomes normalized and discussed in ways that are beneficial for society and those affected. Along with raising awareness of mental health in general, there should be a continued focus on treatment options, methods, and modes for healthcare delivery. The Research Anthology on Mental Health Stigma, Education, and Treatment explores the latest research on the newest advancements in mental health, best practices and new research on treatment, and the need for education and awareness to mitigate the stigma that surrounds discussions on mental health. The chapters will cover new technologies that are impacting delivery modes for treatment, the latest methods and models for treatment options, how education on mental health is delivered and developed, and how mental health is viewed and discussed. It is a comprehensive view of mental health from both a societal and medical standpoint and examines mental health issues in children and adults from all ethnicities and socio-economic backgrounds and in a variety of professions, including healthcare, emergency services, and the military. This book is ideal for psychologists, therapists, psychiatrists, counsellors, religious leaders, mental health support agencies and organizations, medical professionals, teachers, researchers, students, academicians, mental health practitioners, and more.

Health Psychology Richard Straub 2016-11-05 Richard Straub's Health Psychology shows students how psychology and health are interconnected. Using real world examples, Straub encourages students to make meaningful connections between the science of health psychology and their own everyday experience. The text is comprehensive in its approach, and incorporates the latest research as it examines the field's main ideas and models a scientific way of thinking about those ideas. Health Psychology provides the most accessible, current and engaging introduction to health psychology today. The book

can be purchased with the breakthrough online resource, LaunchPad, which offers innovative media content, curated and organised for easy assignability. LaunchPad's intuitive interface presents quizzing, flashcards, animations and much more to make learning actively engaging.

Biopsychosocial Perspectives on Arab Americans Sylvia C. Nassar-McMillan 2013-09-24 This book introduces an interdisciplinary lens by bringing together vital research on culture, psychosocial development, and key aspects of health and disease to address a wide range of salient concerns. Its scholarship mirrors the diversity of the Arab American population, exploring ethnic concepts in socio-historical and political contexts before reviewing findings on major health issues, including diabetes, cancer, substance abuse, mental illness, and maternal/child health. And by including policy and program strategies for disease prevention, health promotion, and environmental health, the book offers practitioners--and their clients--opportunities for proactive care. Featured in the coverage: Family, gender and social identity issues Arab Americans and the aging process Acculturation and ethnic identity across the lifespan Arab refugees: Trauma, resilience, and recovery Cancer: Crossroads of ethnicity and environment Health and well-being: Biopsychosocial prevention approaches Arab American health disparities: A call for advocacy Rich in cultural information and clinical insights, **Biopsychosocial Perspectives on Arab Americans** is an important reference that can enhance health practices across the disciplines of medicine, nursing, rehabilitation, social work, counseling, and psychology.

Health Psychology Edward P. Sarafino 2014-01-13 Sarafino draws from the research and theory of many disciplines in order to show psychologists how psychology and health affect each other. **Health Psychology: Biopsychosocial Interactions**, 8th Edition is updated to include new research and data. New discussions are included on health care systems. Significant new information is also presented on prevention and intervention, especially for teens' risky behaviors. In addition, international examples are included to broaden the psychologist's view of health issues around the world and highlight what works in the field.

Health Psychology Edward P. Sarafino 2020-05-07 Ed Sarafino and Timothy Smith draw from the research and theory of multiple disciplines in order to effectively demonstrate how psychology and health impact each other. The newly updated 9th Edition of **Health Psychology: Biopsychosocial Interactions** includes a broader picture of health psychology by presenting cross-cultural data. Furthermore, international examples are also included to further explore the psychologist's perspective of health issues around the world and highlight what works in the field. The psychological research cited in the text supports a variety of behavioral, physiological, cognitive, and social/personality viewpoints. An emphasis on lifespan development in health and illness is integrated throughout the text.

Biopsychosocial Approaches to Understanding Health in South Asian Americans Marisa J. Perera 2018-08-07 This volume is the first comprehensive and interdisciplinary text to holistically improve understanding of the health of South Asians residing in the United States by considering biological, psychological, and sociocultural factors of health. The vast literatures of diverse fields – psychology, medicine, public health, social work, and health policy – are integrated by leading scholars, scientists, and practitioners in these areas to explore the impact of South Asian cultural factors on health, health risk, and illness. Chapters incorporate available theoretical and empirical information on the status of chronic health conditions in South Asians in the United States, with consideration of future directions to improve understanding of the health of this group. Cultural and ethnic insights imperative for clinical/community/medical practitioners to provide effective and culturally-appropriate care and treatment from an interdisciplinary lens are provided.

Psychology of Aging Brian Yochim, PhD, ABPP 2017-12-28 "The book goes well beyond the information in undergraduate texts and provides stimulating and useful coverage of key topics in biopsychosocial aging. Psychology is not prepared for the future growth of our older adult population, and I suggest **Psychology of Aging: A Biopsychosocial Perspective** as required reading for students" --William E. Haley, PhD; Professor; School of Aging Studies; College of Behavioral and Community Sciences, Tampa, FL "This book distinguishes itself from previous publications on the topic with a thorough review of the history profession of geropsychology and its timely inclusion of chapters on brain imaging techniques and the aging brain, cultural differences in aging ethnic and sexual minorities, cognitive interventions, and more. This book is a must read for undergraduate and graduate students studying aging, and one I will definitely recommend to students new to the area."--Sherry A. Beaudreau, Ph.D., ABPP, VA Palo Alto Health Care System and Stanford University School of Medicine "Brian Yochim and Erin Woodhead have created an invaluable tool for learning about and teaching geropsychology...This book will serve as a seminal text in training psychologists, social workers, and many other disciplines in the psychology of aging." --Erin E. Emery-Tiburcio, Ph.D., ABPP, Rush University, Chicago, IL The only graduate text to encompass the full range of issues regarding the psychology of aging This is the first graduate-level text that offers a comprehensive, in-depth chronicle of issues surrounding the psychology of aging emphasizing psychology, with a foundation in the biology, and an expansion into the sociological aspects of aging. The text is divided into three sections: biological underpinnings of aging, psychological components of aging, and social aspects of aging. Among the multitude of topics addressed are biological theories of aging, neuroimaging methods in aging research, neuroplasticity, cognitive reserve and cognitive interventions, a detailed overview of neurocognitive disorders in aging such as Alzheimer's disease and Lewy body disease, relationships in aging, work vs. retirement, cultural issues in aging, and aging and the legal system, to name just a few critical topics. With an emphasis on promoting critical thinking, the text is enriched with discussion questions in each chapter along with suggestions for more in-depth readings. In addition it includes chapter PowerPoints and an Instructor's Manual with sample syllabi for a 10-week course and a 15-week course. Written for graduate students in multiple gerontology-related disciplines, the text is also of value to individuals studying nursing, medicine, social work, biology, and occupational, physical, and speech therapies. Key Features: Addresses the biological underpinnings of aging, psychological components, and social aspects Written by a variety of experts on each area Emphasizes critical thinking throughout the text Presents discussion questions in each chapter Includes PowerPoints and an Instructor's Manual with sample syllabi Tailored to graduate students from multiple disciplines embarking on clinical or research careers involving older adults.
