**Law in Society: Reflections on Children, Family, Culture and Philosophy** Alison Diduck 2015-08-27 This collection, written by legal scholars from around the world, offers insights into a variety of topics from children's rights to criminal law, jurisprudence, medical ethics and more. Its breadth reflects the fact that these are all elements of what can broadly be called 'law and society', that enterprise that is interested in law's place or influence in different aspects of real lives and understands law to be simultaneously symbol, philosophy and action. It also testament to the broad range of vision of Professor Michael Freeman, in whose honour the volume was conceived. The contributions are divided into categories which reflect his distinguished career and publications, over 85 books and countless articles, including pioneering work on children's rights, domestic violence, religious law, jurisprudence, law and culture, family law and medicine, ethics and the law, as well as his enduring commitment to interdisciplinarity.

**Low Carbon Transitions for Developing Countries** Frauke Urban 2014-06-13 Global climate change is one of the greatest challenges of our times and in order to tackle this carbon emissions need to be mitigated. China and India have recently become some of the world's largest greenhouse gas emitters. Transitions to low carbon energy, for reducing emissions that lead to climate change, are therefore an urgent priority for China and India and at a global level. This is the first book focusing on low carbon energy transitions for emerging economies such as China and India, assessing the opportunities and barriers for transitions to renewable and low carbon energy as climate change mitigation options. It uses energy modelling to assess the China's power sector, the economy of Beijing and rural Indian households that do not have access to electricity. The research evaluates the environmental, technical, socio-economic and policy implications of these low carbon transitions, concluding that they are possible in China and India and they can considerably contribute to climate change mitigation. This interdisciplinary book will be of interest to scholars, students, practitioners and policy-makers working in the fields of energy and development, energy policy, energy studies and modelling, climate policy, climate change mitigation, climate change and development, low carbon development, sustainable development, environment and development and environmental management.

**The Body Toxic** Nena Baker 2008-08-05 We are running a collective chemical fever that we cannot break. Everyone everywhere now carries a dizzying array of chemical contaminants, the by-products of modern industry and innovation that contribute to a host of developmental deficits and health problems in ways just now being understood. These toxic substances, unknown to our grandparents, accumulate in our fat, bones, blood, and organs as a consequence of womb-to-tomb exposure to industrial substances as common as the products that contain them. Almost everything we encounter—from soap to soup cans and computers to clothing—contributes to a chemical load unique to each of us. Scientists studying the phenomenon refer to it as "chemical body burden," and in *The Body Toxic*, the investigative journalist Nena Baker explores the many factors that have given rise to this condition—from manufacturing breakthroughs to policy decisions to political pressure to the demands of popular culture. While chemical advances have helped raise our standard of living, making our lives easier and safer in many ways, there are costs to these conveniences that chemical companies would rather consumers never knew about. Baker draws back the curtain on this untold impact and assesses where we go from here.

**Modeling Risk Management in Sustainable Construction** Desheng Dash Wu 2010-11-08 In this edited volume, we present the state-of-the-art views of the perspective of enterprise risk management, to include frameworks and controls in the ERM process with respect to supply chains, constructions, and project, energy, environmental and sustainable development risk management. The bulk of this volume is devoted to presenting a number of modeling approaches that have been (or could be) applied to enterprise risk management in construction.

**Proceedings of the 20th Congress of the International Ergonomics Association (IEA 2018)** Sebastiano Bagnara 2018-08-07 This book presents the proceedings of the 20th Congress of the International Ergonomics Association (IEA 2018), held on August 26-30, 2018, in Florence, Italy. By highlighting the latest theories and models, as well as cutting-edge technologies and applications, and by combining findings from a range of disciplines including engineering, design, robotics, healthcare, management, computer science, human biology and behavioral science, it provides researchers and practitioners alike with a comprehensive, timely guide on human factors and ergonomics. It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance, while at the same time promoting the health, safety and wellbeing of individuals. The proceedings include papers from researchers and practitioners, scientists and physicians, institutional leaders, managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies, domains and productive sectors. This volume includes papers addressing the following topics: Ergonomics in Manufacturing, Agriculture, Building and Construction, and Mining, and Human Factors and Sustainable Development.

**Digital Human Sciences** Sonya Petersson 2021-06-08 The ongoing digitization of culture and society and the ongoing production of new digital objects in culture and society require new ways of investigation, new theoretical avenues, and new multidisciplinary frameworks. In order to meet these requirements, this collection of eleven studies digs into questions concerning, for example: the epistemology of data produced and shared on social media platforms; the need of new legal concepts that regulate the increasing use of artificial intelligence in society; and the need of combinatory methods to research new media objects such as podcasts, web art, and online journals in relation to their historical, social, institutional, and political effects and contexts. The studies in this book introduce the new research field "digital human sciences," which include the humanities, the social sciences, and law. From their different disciplinary outlooks, the authors share the aim of discussing and developing methods and approaches for investigating digital society, digital culture, and digital media objects.

**Handbook of Children's Rights** Martin D. Ruck 2016-12-08 While the notion of young people as individuals worthy or capable of having rights is of relatively recent origin, over the past several decades there has been a substantial increase in both social and political commitment to children's rights as well as a tendency to grant young people some of the rights that were typically accorded only to adults. In addition, there has been a noticeable shift in orientation from a focus on children's protection and provision to an emphasis on children's participation and self-determination. With contributions from a wide range of international scholars, the Handbook of Children's Rights brings together research, theory, and practice from diverse perspectives on children's rights. This volume constitutes a comprehensive treatment of critical perspectives concerning children's rights in their various forms. Its contributions address some of the major scholarly tensions and policy debates comprising the current discourse on children's rights, including the best interests of the child, evolving capacities of the child, states' rights versus children's rights, rights of children versus parental or family rights, children as citizens, children's rights versus children's responsibilities, and balancing protection and participation. In addition to its multidisciplinary focus, the handbook includes perspectives from social science domains in which children's rights scholarship has evolved largely independently due to distinct and seemingly competing assumptions and disciplinary approaches (e.g., childhood studies, developmental psychology, sociology of childhood, anthropology, and political science). The handbook also brings together diverse methodological approaches to the study of children's rights, including both quantitative and qualitative perspectives, and policy analysis. This comprehensive, cosmopolitan, and timely volume serves as an important reference for both scholarly and policy-driven interest in the voices and perspectives of children and youth.

*The Economics of Climate Change in China* Fan Gang 2013-09-13 China faces many modernization challenges, but perhaps none is more pressing than that posed by climate change. China must find a new economic growth model that is simultaneously environmentally sustainable, can free it from its dependency on fossil fuels, and lift living standards for the majority of its population. But what does such a model look like? And how can China best make the transition from its present macro-economic structure to a low-carbon future? This ground-breaking economic study, led by the Stockholm Environment Institute and the Chinese Economists 50 Forum, brings together leading international thinkers in economics, climate change, and development, to tackle some of the most challenging issues relating to China's low-carbon development. This study maps out a deep carbon reduction scenario and analyzes economic policies that shift carbon use, and shows how China can take strong and decisive action to make deep reductions in carbon emission over the next forty years while maintaining high economic growth and minimizing adverse effects of a low-carbon transition. Moreover, these reductions can be achieved within the finite global carbon budget for greenhouse gas emissions, as determined by the hard constraints of climate science. The authors make the compelling case that a transition to a low-carbon economy is an essential part of China's development and modernization. Such a transformation would also present opportunities for China to improve its energy security and move its economy higher up the international value chain. They argue that even in these difficult economic times, climate change action may present more opportunities than costs. Such a transformation, for China and the rest of the world, will not be easy. But it is possible, necessary and worthwhile to pursue. **DK Eyewitness Top 10 Travel Guide: Stockholm** 2013-02-01 DK Eyewitness Top 10 Travel Guide: Stockholm will lead you straight to the very best on offer. **Xenobiotics in the Urban Water Cycle** Despo Fatta-Kassinou 2010-01-06 The history of chemistry and pharmaceutical sciences is an impressive success story. The products of chemical and pharmaceutical industries are present eve- where in our everyday life. They help to pursue the modern way of living and they contribute to our high standard of living and safety, mobility, communication te- nologies, food, health, textiles and drinking water treatment, among many others. These products are labeled under the categories: pharmaceuticals, pesticides, det- gents, fertilizers, dyes, paints, preservatives, food additives and personal care pr- ucts, to name a few. Within these categories, groups of chemicals with similar structures can be found. However, often groups of chemicals with very different structures belong to the same category. For a long time the production of chemicals and pharmaceuticals, their usage and application was connected with the heavy pollution of the environment and serious health effects. At the end of the last century, it was realised that the products of che- cal and pharmaceutical industries are presenting a new type of environmental pol- tion that may also pose a health risk to the consumer. Most chemicals are used in so-called open applications in excessive amounts e. g. for personal care, hygiene, plant protection, health and in textiles. In many cases such as scents, detergents, textile chemicals, surface disinfectants, pesticides and others it is unavoidable that these chemicals are released into the environment according to their intended use.

**Research Handbook on International Environmental Law** Malgosia Fitzmaurice 2010 . . . an impressive volume and the editors have put together a high quality collection. Research Handbook on International Environmental Law ought to be an invaluable reference source for both teachers and students of international environmental law in the years to come. Web Journal of Current Legal Issues This wide-ranging and comprehensive Handbook examines recent developments in international environmental law (IEL) and the crossover effects of this expansion on other areas of international law, such as trade law and the law of the sea. The expert contributors offer analyses of foundational issues in IEL, such as responsibility for environmental damage, sustainable development and the precautionary principle, alongside studies in topical subject areas including marine protection and the law of international watercourses. This Research Handbook offers an in-depth analysis of IEL, both as a field of law in its own right, and as part of the wider system of international law. It gives a comprehensive view of IEL in all its forms and complexity. With thorough examination of specific environmental regimes and compliance mechanisms, this Handbook will be an indispensable resource for legal scholars, students and practitioners alike. **OECD Green Growth Studies Green Growth in Stockholm, Sweden** OECD 2013-05-23 This report studies green growth trends, challenges and opportunities in the City of Stockholm, Sweden.

**Regenerative Sanitation** Thammarat Kootatep 2019-02-15 This book proposes Regenerative Sanitation as the next era of sanitation management and attempts to provide a foundation for the study of sanitation on the premise that sanitation is a complex and dynamic system that comprises of social-ecological, technological and resource systems. The preconception is that sanitation will deliver maximal benefits to society only when there exists a cyclical integration of the three subsystems to enable appropriate linkages between 'technological design' and the 'delivery platform' so as to achieve optimal and sustained sani-solutions. It also calls for the rethinking of sanitation to change the narrative towards more progressive trajectories such as resource recovery and reuse rather than just amelioration. It explores the contributions to food security, livelihood support, urban regeneration, rural development and even local economies. A new paradigm, theory and ten principles for ensuring practical and effective sanitation solutions and management is presented. In addition is a unique conceptual framework applicable to both developed and developing countries, and to all stages, processes and cycles of delivering sanitation solutions that could critically evaluate, analyse and provide credible, adequate and appropriate sanitation solutions. All of which culminates in a strategic and practical application platform called 'Sanitation 4.0' that advocates for total rejuvenation and comprehensive overhaul with eight key strategic considerations for the implementation. Regenerative Sanitation: A New Paradigm For Sanitation 4.0 is inter and trans- disciplinary and encourages collaboration between engineers, scientists, technologists, social scientists and others to provide effective and practical user-centred solutions. It includes relevant case studies, examples, exercise and future research recommendations. It is written as both a textbook for researchers and students as well as a practitioners' guide for policymakers and professionals.

*The First 1000 Days in the Nordic Countries: A Situation Analysis* Danielsdóttir, Sigrún 2020-12-16 Available online: <https://pub.norden.org/nord2020-051/> The First 1000 Days in the Nordic Countries is a Nordic collaborative project, launched as part of the 2019 Icelandic Presidency of the Nordic Council of Ministers, with the aim to support healthy emotional development and good mental health during the first 1000 days of life (from conception to the age of two). The first phase involved a situation analysis in which extensive data was gathered from across the Nordic countries about practices to support wellbeing and identify early risk factors in prenatal care, infant and child healthcare and early childhood education and care. The results are presented in this report with detailed country profiles and a comparison across countries. Significant strengths and challenges are identified when it comes to supporting young children's wellbeing within the Nordic region and examples of good practice from each participating country are offered.

*Crime and Fear in Public Places* Vania Ceccato 2020-07-15 The Open Access version of this book, available at <https://www.taylorfrancis.com/books/9780429352775> has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license. No city environment reflects the meaning of urban life better than a public place. A public place, whatever its nature—a park, a mall, a train platform or a street corner—is where people pass by, meet each other and at times become a victim of crime. With this book, we submit that crime and safety in public places are not issues that can be easily dealt with within the boundaries of a single discipline. The book aims to illustrate the complexity of patterns of crime and fear in public places with examples of studies on these topics contextualized in different cities and countries around the world. This is achieved by tackling five cross-cutting themes: the nature of the city's environment as a backdrop for crime and fear; the dynamics of individuals' daily routines and their transit safety; the safety perceptions experienced by those who are most in fear in public places; the metrics of crime and fear; and, finally, examples of current practices in promoting safety. All these original chapters contribute to our quest for safer, more inclusive, resilient, equitable and sustainable cities and human settlements aligned to the Global 2030 Agenda for Sustainable Development.

**International Arbitration in Sweden** Annette Magnusson 2021-03-09 Sweden is one of a handful of countries where the international arbitral process has reached a stage where the jurisprudence is replete with instances involving no local parties at all. In this context of credible neutrality, the Arbitration Institute of the Stockholm Chamber of Commerce (SCC) has emerged as a leading global arbitral institution. Whether the matter at issue is a business transaction dispute or a politicized conflict involving obdurate parties, the richness of its body of decided cases manifests the SCC's authority and reliability throughout the converging world of international arbitration. The present book, written by sixteen eminent practitioners and now in its second edition, provides a practical guide to international arbitration in Sweden, whether ad hoc or institutional. Among the many elements of practice and procedure detailed are the following: appointment, challenge, removal, and compensation of arbitrators; procedural efficiency and costs; use of international legal sources such as IBA guidelines; choice of law by parties; SCC rules and procedures; multiparty arbitrations – joinder, intervention, consolidation; investment treaty arbitration; confidentiality; documentary evidence, witnesses, and experts; grounds for setting aside; party succession; Swedish court review of the arbitrator's jurisdiction; and appeal of arbitrators' compensation. In addition, readers will be exposed to a trove of pertinent references to important decisions that have, in recent decades, been generated by the stream of major international arbitrations conducted in Sweden. Disputing parties wishing to know what will happen when their case is brought to Sweden for arbitration will find no clearer or more thorough guide. This book is an incomparable source for anyone called upon to act as arbitrator or counsel, or in any other capacity, in international arbitration in Sweden.

**Protecting Elections: Risk Management, Resilience-Building and Crisis Management in Elections** Sead Alihodžić 2023-06-22 When elections go wrong, they can contribute to political crises that undermine democratic processes and institutions, trigger violent conflicts and instability, and harm governments' domestic and international legitimacy. Therefore, calls to protect electoral integrity against manipulation from autocratic figures, malicious foreign interferences, negative impacts from natural hazards, and technical and human errors are ever increasing. The main objective of this Discussion Paper is to outline the importance of and avenues for an increased use of risk management, resilience-building and crisis management methods to protect electoral integrity.
