

*Tourism as a Tool for Development* P. Díaz 2013-10-30 Some researchers perceive tourism as a process which creates dependency and causes loss of socioeconomic and environmental control, and is harmful to traditional sociocultural structures. For others it is clearly an opportunity for development and convergence among societies. The main consequences of tourism are economic, sociocultural and socio-ecological ones. These directly affect the natural and cultural landscape, as well as the inhabitants of the destinations. 'Proper management' can unite the local community; strengthen the historical memory and promote the recognition that the landscape is a legacy worth preserving. If local people can learn to appreciate the need for regulation and careful development of cultural tourism then it is possible to have an alternative to the strategies of convenience, based upon the view of tourism only for profit. Designing tourism to serve heritage and local sustainable development not only helps to conserve the resources that make it possible, but also complies with the ethical duty to guide social perception towards awareness and respect, which in turn will lead to sustainability. By means of case studies and theoretical developments, the authors attempt to present methods designed to minimise the impacts of tourism and encourage its positive effects. Some ideas in the book discuss the role of local communities, their participation in development management, the singularities of community tourism, planning, local governance and the relationship between socio-economic benefits and impacts.

*Disease Control Priorities, Third Edition (Volume 6)* King K. Holmes 2017-11-06 Infectious diseases are the leading cause of death globally, particularly among children and young adults. The spread of new pathogens and the threat of antimicrobial resistance pose particular challenges in combating these diseases. Major Infectious Diseases identifies feasible, cost-effective packages of interventions and strategies across delivery platforms to prevent and treat HIV/AIDS, other sexually transmitted infections, tuberculosis, malaria, adult febrile illness, viral hepatitis, and neglected tropical diseases. The volume

emphasizes the need to effectively address emerging antimicrobial resistance, strengthen health systems, and increase access to care. The attainable goals are to reduce incidence, develop innovative approaches, and optimize existing tools in resource-constrained settings.

*The impact of disasters and crises on agriculture and food security: 2021* Food and Agriculture Organization of the United Nations 2021-03-17 On top of a decade of exacerbated disaster loss, exceptional global heat, retreating ice and rising sea levels, humanity and our food security face a range of new and unprecedented hazards, such as megafires, extreme weather events, desert locust swarms of magnitudes previously unseen, and the COVID-19 pandemic. Agriculture underpins the livelihoods of over 2.5 billion people - most of them in low-income developing countries - and remains a key driver of development. At no other point in history has agriculture been faced with such an array of familiar and unfamiliar risks, interacting in a hyperconnected world and a precipitously changing landscape. And agriculture continues to absorb a disproportionate share of the damage and loss wrought by disasters. Their growing frequency and intensity, along with the systemic nature of risk, are upending people's lives, devastating livelihoods, and jeopardizing our entire food system. This report makes a powerful case for investing in resilience and disaster risk reduction - especially data gathering and analysis for evidence informed action - to ensure agriculture's crucial role in achieving the future we want.
