Introduction to Embedded Systems, Second Edition 2016-12-30 Edward Ashford Lee An introduction to the engineering principles of embedded systems, with a focus on modeling, design, and analysis of cyber-physical systems. The most visible use of computers and software is processing information for human consumption. The vast majority of computers in use, however, are much less visible. They run the engine, brakes, seatbelts, airbag, and audio system in your car. They digitally encode your voice and construct a radio signal to send it from your cell phone to a base station. They command robots on a factory floor, power generation in a power plant, processes in a chemical plant, and traffic lights in a city. These less visible computers are called embedded systems, and the software they run is called embedded software. The principal challenges in designing and analyzing embedded systems stem from their interaction with physical processes. This book takes a cyber-physical approach to embedded systems, introducing the engineering concepts underlying embedded systems as a technology and as a subject of study. The focus is on modeling, design, and analysis of cyber-physical systems, which integrate computation, networking, and physical processes. The second edition offers two new chapters, several new exercises, and other improvements. The book can be used as a textbook at the advanced undergraduate or introductory graduate level and as a professional reference for practicing engineers and computer scientists. Readers should have some familiarity with machine structures, computer programming, basic discrete mathematics and algorithms, and signals and systems.

The Future of Computing Performance 2011-04-21 National Research Council The end of dramatic exponential growth in single-processor performance marks the end of the dominance of the single microprocessor in computing. The era of sequential computing must give way to a new era in which parallelism is at the forefront. Although important scientific and engineering challenges lie ahead, this is an opportune time for innovation in programming systems and computing architectures. We have already begun to see diversity in computer designs to optimize for such considerations as power and throughput. The next generation of discoveries is likely to require advances at both the hardware and software levels of computing systems. There is no guarantee that we can make parallel computing as common and easy to use as yesterday's sequential single-processor computer systems, but unless we aggressively pursue efforts suggested by the recommendations in this book, it will be "game over" for growth in computing performance. If parallel programming and related software efforts fail to become widespread, the development of exciting new applications that drive the computer industry will stall; if such innovation stalls, many other parts of the economy will follow suit. The Future of Computing Performance describes the factors that have led to the future limitations on growth for single processors that are based on complementary metal oxide semiconductor (CMOS) technology. It explores challenges inherent in parallel computing and architecture, including ever-increasing power consumption and the escalated requirements for heat dissipation. The book delineates a research, practice, and education agenda to help overcome these challenges. The Future of Computing Performance will guide researchers, manufacturers, and information technology professionals in the right direction for sustainable growth in computer performance, so that we may all enjoy the next level of benefits to society.

Cloud Computing 2010-12-17 Rajkumar Buyya The primary purpose of this book is to capture the state-of-the-art in Cloud Computing technologies and applications. The book will also aim to identify potential research directions and technologies that will facilitate creation a global market-place of cloud computing services supporting scientific, industrial, business, and consumer applications. We expect the book to serve as a reference for larger audience such as systems architects, practitioners, developers, new researchers and graduate level students. This area of research is relatively recent, and as such has no existing reference book that addresses it. This book will be a timely contribution to a field that is gaining considerable research interest, momentum, and is expected to be of increasing interest to commercial developers. The book is targeted for professional computer science developers and graduate students especially at Masters level. As Cloud Computing is recognized as one of the top five emerging technologies that will have a major impact on the quality of science and society over the next 20 years, its knowledge will help position our readers at the forefront of the field.

Towards a Climate-Neutral Europe 2019-10-16 Jos Delbeke This book explains the EU's climate policies in an accessible way, to demonstrate the step-by-step approach that has been used to develop these policies, and the ways in which they have been tested and further improved in the light of experience. The latest changes to the legislation are fully explained throughout. The chapters throughout this volume show that no single policy instrument can bring down greenhouse gas emissions. The challenge facing the EU, as for many countries that have made pledges under the Paris Agreement, is to put together a toolbox of policy instruments that is coherent, delivers emissions reductions, and is cost-effective. The book stands out by the fact it covers the EU's emissions trading system, the energy sector and other economic sectors, including their development in the context of international climate policy. This accessible book will be of great relevance to students, scholars and policy makers alike. Poetry in Speech 2018-03-15 Egbert J. Bakker Applying linguistic theory to the study of Homeric style, Egbert J. Bakker offers a highly innovative approach to oral poetry, particularly the poetry of Homer. By situating formulas and other features of oral style within the wider contexts of spoken language and communication, he moves the study of oral poetry

beyond the landmark work of Milman Parry and Albert Lord. One of the book's central features, related to the research of the linguist Wallace Chafe, is Bakker's conception of spoken discourse as a sequence of short speech units reflecting the flow of speech through the consciousness of the speaker. Bakker shows that such short speech units are present in Homeric poetry, with significant consequences for Homeric metrics and poetics. Considering Homeric discourse as a speech process rather than as the finished product associated with written discourse, Bakker's book offers a new perspective on Homer as well as on other archaic Greek texts. Here Homeric discourse appears as speech in its own right, and is freed, Bakker suggests, from the bias of modern writing style which too easily views Homeric discourse as archaic, implicitly taking the style of classical period texts as the norm. Bakker's perspective reaches beyond syntax and stylistics into the very heart of Homeric—and, ultimately, oral—poetics, altering the status of key features such as meter and formula, rethinking their relevance to the performance of Homeric poetry, and leading to surprising insights into the relation between "speech" and "text" in the encounter of the Homeric tradition with writing.

Resource Efficiency and Climate Change 2021-01-12 United Nations "The International Resource Panel (IRP) was established to provide independent, coherent and authoritative scientific assessments on the use of natural resources and their environmental impacts over the full life cycle. The Panel aims to contribute to a better understanding of how to decouple economic growth from environmental degradation while enhancing well-being. The Secretariat is hosted by the United Nations Environment Programme. IRP assessments demonstrate the opportunities for governments, businesses and wider society to work together to create and implement policies that ultimately lead to sustainable resource management, including through better planning, technological innovation and strategic incentives and investments. Materials are vital to modern society, but their production is an important source of greenhouse gases. Emissions from material production are now comparable to those from agriculture, forestry, and land use change combined, yet they have received much less attention from the climate policy community. The IRP authors propose looking beyond energy efficiency to reduce global carbon footprint. This report was developed by the IRP in response to a request from the Group of 7. It conducts a rigorous assessment of the contribution of material efficiency to GHG abatement strategies. More concretely, it assesses the potential reduction of GHG emissions from material efficiency strategies applied in residential buildings and light duty vehicles, and reviews policies that address these strategies. The IRP modelling results show that increasing material efficiency can help enhance efforts in moving towards the 1.5° C target set by the Paris Agreement." -- Page 4 of cover

Department of Homeland Security Bioterrorism Risk Assessment 2009-01-03 National Research Council The mission of Department of Homeland Security Bioterrorism Risk Assessment: A Call for Change, the book published in December 2008, is to independently and scientifically review the methodology that led to the 2006 Department of Homeland Security report, Bioterrorism Risk Assessment (BTRA) and provide a foundation for future updates. This book identifies a number of fundamental concerns with the BTRA of 2006, ranging from mathematical and statistical mistakes that have corrupted results, to unnecessarily complicated probability models and models with fidelity far exceeding existing data, to more basic questions about how terrorist behavior should be modeled. Rather than merely criticizing what was done in the BTRA of 2006, this new NRC book consults outside experts and collects a number of proposed alternatives that could improve DHS's ability to assess potential terrorist behavior as a key element of risk-informed decision making, and it explains these alternatives in the specific context of the BTRA and the bioterrorism threat.

Higher Education in the Era of the Fourth Industrial Revolution 2018-06-21 Nancy W. Gleason This open access collection examines how higher education responds to the demands of the automation economy and the fourth industrial revolution. Considering significant trends in how people are learning, coupled with the ways in which different higher education institutions and education stakeholders are implementing adaptations, it looks at new programs and technological advances that are changing how and why we teach and learn. The book addresses trends in liberal arts integration of STEM innovations, the changing role of libraries in the digital age, global trends in youth mobility, and the development of lifelong learning programs. This is coupled with case study assessments of

the various ways China, Singapore, South Africa and Costa Rica are preparing their populations for significant shifts in labour market demands – shifts that are already underway. Offering examples of new frameworks in which collaboration between government, industry, and higher education institutions can prevent lagging behind in this fast changing environment, this book is a key read for anyone wanting to understand how the world should respond to the radical technological shifts underway on the frontline of higher education.

Algorithms and Data Structures 2008-05-27 Kurt Mehlhorn Algorithms are at the heart of every nontrivial computer application, and algorithmics is a modern and active area of computer science. Every computer scientist and every professional programmer should know about the basic algorithmic toolbox: structures that allow efficient organization and retrieval of data, frequently used algorithms, and basic techniques for modeling, understanding and solving algorithmic problems. This book is a concise introduction addressed to students and professionals familiar with programming and basic mathematical language. Individual chapters cover arrays and linked lists, hash tables and associative arrays, sorting and selection, priority queues, sorted sequences, graph representation, graph traversal, shortest paths, minimum spanning trees, and optimization. The algorithms are presented in a modern way, with explicitly formulated invariants, and comment on recent trends such as algorithm engineering, memory hierarchies, algorithm libraries and certifying algorithms. The authors use pictures, words and high-level pseudocode to explain the algorithms, and then they present more detail on efficient implementations using real programming languages like C++ and Java. The authors have extensive experience teaching these subjects to undergraduates and graduates, and they offer a clear presentation, with examples, pictures, informal explanations, exercises, and some linkage to the real world. Most chapters have the same basic structure: a motivation for the problem, comments on the most important applications, and then simple solutions presented as informally as possible and as formally as necessary. For the more advanced issues, this approach leads to a more mathematical treatment, including some theorems and proofs. Finally, each chapter concludes with a section on further findings, providing views on the state of research, generalizations and advanced solutions.

Advice And Support: The Early Years 1941-1960 [Illustrated Edition] 2014-08-15 Ronald H. Spector Includes over 75 maps, photos and plans. The present volume describes the activities of the U.S. Army in Vietnam during World War II, military advice and assistance to the French government during the immediate post-war years, and the advisory program that developed after the Geneva Agreements of 1954. Its scope ranges from high-level policy decisions to low-echelon advisory operations in the field, presented against a background of relevant military and political developments. The author enjoyed access to the official records of the period and examined personal papers, interviews, other documentary sources, and miscellaneous published materials. Useful not only as a study of military assistance but as a view of the Army as an agent of national policy, this volume is a fitting introduction to the overall study of the conflict in Vietnam.

The Meme Machine 2000-03-16 Susan Blackmore Humans are extraordinary creatures, with the unique ability among animals to imitate and so copy from one another ideas, habits, skills, behaviours, inventions, songs, and stories. These are all memes, a term first coined by Richard Dawkins in 1976 in his book *The Selfish Gene*. Memes, like genes, are replicators, and this enthralling book is an investigation of whether this link between genes and memes can lead to important discoveries about the nature of the inner self. Confronting the deepest questions about our inner selves, with all our emotions, memories, beliefs, and decisions, Susan Blackmore makes a compelling case for the theory that the inner self is merely an illusion created by the memes for the sake of replication.

Computer Architecture Techniques for Power-Efficiency 2022-06-01 Stefanos Kaxiras In the last few years, power dissipation has become an important design constraint, on par with performance, in the design of new computer systems. Whereas in the past, the primary job of the computer architect was to translate improvements in operating frequency and transistor count into performance, now power efficiency must be taken into account at every step of the design process. While for some time, architects have been successful in delivering 40% to 50% annual improvement in processor performance, costs that were previously brushed aside eventually caught up. The most critical of these costs is the inexorable increase in power dissipation and power density in processors. Power dissipation issues have catalyzed new topic areas in computer architecture, resulting in a substantial body of work on more power-efficient architectures. Power dissipation coupled with diminishing performance gains, was also the main cause for the switch from single-core to multi-core architectures and a slowdown in frequency increase. This book aims to document some of the most important architectural techniques that were invented, proposed, and applied to reduce both dynamic power and static power dissipation in processors and memory hierarchies. A significant number of techniques have been proposed for a wide range of situations and this book synthesizes those techniques by focusing on their common characteristics. Table of Contents: Introduction / Modeling, Simulation, and Measurement / Using Voltage and Frequency Adjustments to Manage Dynamic Power / Optimizing Capacitance and Switching Activity to Reduce Dynamic Power / Managing Static (Leakage) Power / Conclusions

Making Better Policies for Food Systems 2021-01-11 OECD Food systems around the world face a triple challenge: providing food security and nutrition for a growing global population; supporting livelihoods for those working along the food supply chain; and contributing to environmental sustainability. Better policies hold tremendous promise for making progress in these domains.

Genetic and Genomic Resources of Grain Legume Improvement 2013-07-18 Mohar Singh Grain legumes, including common-bean, chickpea, pigeonpea, pea, cowpea, lentil and others, form important constituents of global diets, both vegetarian and non-vegetarian. Despite this significant role, global production has increased only marginally in the past 50 years. The slow production growth, along with a rising human population and improved buying capacity has substantially reduced the per capita availability of food legumes. Changes in environmental climate have also had significant impact on production, creating a need to identify stable donors among genetic resources for environmentally robust genes and designing crops resilient to climate change. Genetic and Genomic Resources of Grain Legume Improvement is the first book to bring together the latest resources in plant genetics and genomics to facilitate the identification of specific germplasm, trait mapping and allele mining to more effectively develop biotic and abiotic-stress-resistant grains. This book will be an invaluable resource for researchers, crop biologists and students working with crop development. Explores origin, distribution and

diversity of grain legumes Presents information on germplasm collection, evaluation and maintenance Offers insight into pre-breeding/germplasm enhancement efforts Integrates genomic and genetic resources in crop improvement Internationally contributed work

Broken Voices 2018-03-31 Roald Maliangkay Broken Voices is the first English-language book on Korea's rich folksong heritage, and the first major study of the effects of Japanese colonialism on the intangible heritage of its former colony. Folksongs and other music traditions continue to be prominent in South Korea, which today is better known for its technological prowess and the Korean Wave of popular entertainment. In 2009, many Koreans reacted with dismay when China officially recognized the folksong Arirang, commonly regarded as the national folksong in North and South Korea, as part of its national intangible cultural heritage. They were vindicated when versions from both sides of the DMZ were included in UNESCO's Representative List of the Intangible Cultural Heritage of Humanity a few years later. At least on a national level, folksongs thus carry significant political importance. But what are these Korean folksongs about, and who has passed them on over the years, and how? Broken Voices describes how the major repertoires were transmitted and performed in and around Seoul. It sheds light on the training and performance of professional entertainment groups and singers, including kisaeng, the entertainment girls often described as Korean geisha. Personal stories of noted singers describe how the colonial period, the media, the Korean War, and personal networks have affected work opportunities and the standardization of genres. As the object of resentment (and competition) and a source of creative inspiration, the image of Japan has long affected the way in which Koreans interpret their own culture. Roald Maliangkay describes how an elaborate system of heritage management was first established in modern Korea and for what purposes. His analysis uncovers that folksong traditions have changed significantly since their official designation; one major change being gender representation and its effect on sound and performance. Ultimately, Broken Voices raises an important issue of cultural preservation—traditions that fail to attract practitioners and audiences are unsustainable, so compromises may be unwelcome, but imperative. Transient Workspaces 2014-09-19 Clapperton Chakanetsa Mavhunga An account of technology in Africa from an African perspective, examining hunting in Zimbabwe as an example of an innovative mobile workspace. In this book, Clapperton Mavhunga views technology in Africa from an African perspective. Technology in his account is not something always brought in from outside, but is also something that ordinary people understand, make, and practice through their everyday innovations or creativities—including things that few would even consider technological. Technology does not always originate in the laboratory in a Western-style building but also in the society in the forest, in the crop field, and in other places where knowledge is made and turned into practical outcomes. African creativities are found in African mobilities. Mavhunga shows the movement of people as not merely conveyances across space but transient workspaces. Taking indigenous hunting in Zimbabwe as one example, he explores African philosophies of mobilities as spiritually guided and of the forest as a sacred space. Viewing the hunt as guided mobility, Mavhunga considers interesting questions of what constitutes technology under regimes of spirituality. He describes how African hunters extended their knowledge traditions to domesticate the gun, how European colonizers, with no remedy of their own, turned to indigenous hunters for help in combating the deadly tsetse fly, and examines how wildlife conservation regimes have criminalized African hunting rather than enlisting hunters (and their knowledge) as allies in wildlife sustainability. The hunt, Mavhunga writes, is one of many criminalized knowledges and practices to which African people turn in times of economic or political crisis. He argues that these practices need to be decriminalized and examined as technologies of everyday innovation with

a view toward constructive engagement, innovating with Africans rather than for them.

Synchronized Factories 2014-09-15 Juan S. Blyde The objective of this report is to examine the extent to which countries in Latin America and the Caribbean participate in global value chains and what are the drivers of such participation. Production processes have been increasingly fragmented worldwide. For example, the production of the Boeing 787 Dreamliner involves 43 suppliers located in 135 locations around the globe. There are many examples like the Dreamliner, from the 451 parts that go into the iPod to the less technologically intensive but still widespread multi-country production of a Barbie doll. All this reflects significant changes in the way world production is being reorganized across national borders. That is, for many goods, production has become a multi-country process in which different stages are carried out in specialized plants in different parts of the world. Countries which specialize in different stages of the production process are thus linked by these global value chains. For developing countries, a clear opportunity from the continuous international fragmentation of production arises in the form of participating in activities that were virtually not opened to them in the past. Therefore, the international fragmentation of production provides opportunities for trade diversification, an issue that can be of particular importance for Latin America and the Caribbean as the region's export base is in general highly concentrated in a few industries and particularly biased towards natural-resource intensive sectors. The aim is to identify whether there is policy space for implementing strategies that allow countries to improve their position in regional and global value chains.

Bioeconomy and Global Inequalities 2021-05-17 Maria Backhouse This open access book focuses on the meanings, agendas, as well as the local and global implications of bioeconomy and bioenergy policies in and across South America, Asia and Europe. It explores how a transition away from a fossil and towards a bio-based economic order alters, reinforces

and challenges socio-ecological inequalities. The volume presents a historically informed and empirically rich discussion of bioeconomy developments with a particular focus on bio-based energy. A series of conceptual discussions and case studies with a multidisciplinary background in the social sciences illuminate how the deployment of biomass sources from the agricultural and forestry sectors affect societal changes concerning knowledge production, land and labour relations, political participation and international trade. How can a global perspective on socio-ecological inequalities contribute to a complex and critical understanding of bioeconomy? Who participates in the negotiation of specific bioeconomy policies and who does not? Who determines the agenda? To what extent does the bioeconomy affect existing socio-ecological inequalities in rural areas? What are the implications of the bioeconomy for existing relations of extraction and inequalities across regions? The volume is an invitation to reflect upon these questions and more, at a time when the need for an ecological and socially just transition away from a carbon intensive economy is becoming increasingly pressing.

Back to School 2019-05-31 Subhashini Rajasekaran "Back to School: Pathways for Reengagement of Out-of-School Youth in Education" focuses on a social and global problem--200 million adolescents and youth are out of school, live in adverse life circumstances, and face multiple disadvantages. It analyzes the available evidence for what works, how, and why for reengaging and retaining these young people in education. The study further explores for whom and in what contexts the identified interventions can be effective, considering variations in both individual and contextual characteristics of the targeted youth. The synthesized findings from this review are used to build a broad theory of change which can guide efforts of policy and programming for designing contextualized interventions for education reengagement.

De los recursos naturales a la economía del conocimiento 2002 David M. De Ferranti The study questions whether, after a decade of remarkable progress in trade reform, Latin America and the Caribbean really integrates into the global market, offering a promising rapid growth, and good jobs for its workers. For despite the incidence of the loosely called "knowledge economy", the concern prevails that most countries' rich natural resources, still are the determining factor for exports. Policy recommendations include fostering openness to trade, market access, and foreign direct investment flows, in addition to building human capital, institutions, and public infrastructure, without disregarding the natural advantages. To this end, policymakers should aim at developing educational systems that provide quality education, focused on lifelong learning, and training activities to build human capital. Emphasis should follow on research and development (R&D) incentives, and innovations systems, arguing that countries should experiment with taxation incentives, and subsidies to promote both private, and public investments in R&D, (dependent on the institutional capacity of governments to enforce tax laws, and monitor the quality of investments). Moreover, evidence in this report, suggests that information, and communications technology (ICT) can reduce coordination costs, enabling an effective industrialization, and market access.

The Future of Work 2019-10-15 Darrell M. West Looking for ways to handle the transition to a digital economy Robots, artificial intelligence, and driverless cars are no longer things of the distant future. They are with us today and will become increasingly common in coming years, along with virtual reality and digital personal assistants. As these tools advance deeper into everyday use, they raise the question--how will they transform society, the economy, and politics? If companies need fewer workers due to automation and robotics, what happens to those who once held those jobs and don't have the skills for new jobs? And since many social benefits are delivered through jobs, how are people outside the workforce for a lengthy period of time going to earn a living and get health care and social benefits? Looking past today's headlines, political scientist and cultural observer Darrell M. West argues that society needs to rethink the concept of jobs, reconfigure the social contract, move toward a system of lifetime learning, and develop a new kind of politics that can deal with economic dislocations. With the U.S. governance system in shambles because of political polarization and hyper-partisanship, dealing creatively with the transition to a fully digital economy will vex political leaders and complicate the adoption of remedies that could ease the transition pain. It is imperative that we make major adjustments in how we think about work and the social

contract in order to prevent society from spiraling out of control. This book presents a number of proposals to help people deal with the transition from an industrial to a digital economy. We must broaden the concept of employment to include volunteering and parenting and pay greater attention to the opportunities for leisure time. New forms of identity will be possible when the "job" no longer defines people's sense of personal meaning, and they engage in a broader range of activities. Workers will need help throughout their lifetimes to acquire new skills and develop new job capabilities. Political reforms will be necessary to reduce polarization and restore civility so there can be open and healthy debate about where responsibility lies for economic well-being. This book is an important contribution to a discussion about tomorrow--one that needs to take place today.

There are also other forms of acupuncture that do not use needles. For instance there is sonopuncture that uses an ultrasound device that transmits sound waves to points in the body to treat a patient. Some practitioners use a tuning fork or other vibration devices.

Parts of adolescent's body are filled with a waxy stuff identified as cholesterol. It helps to produce vitamin D, cell membranes and certain hormones. Blood cholesterol comes from two different sources, liver within the body and food. The adolescent's liver produces enough cholesterol to carry out proper functioning.

The blood acts as the carrier of cholesterol and transports it to different parts of the body. They are transported in round particle form known as lipoproteins. There are two types of lipoproteins called the low density lipoproteins or LDL and high density lipoproteins or HDL. Low density lipoprotein or LDL cholesterol is commonly known as bad cholesterol. It helps in the building up of plaque in arteries and this condition is known as atherosclerosis. The LDL level must be low in the blood and if it is high it must be decreased. Healthy weight must be maintained and exercise should be done regularly. Food items which have high contents of calories, dietary cholesterol and saturated fat must be avoided.

High density lipoprotein or HDL cholesterol is the good cholesterol. It is actually a kind of fat in blood which helps to remove bad cholesterol from the body and stops the build up of plaque in the arteries. The more the HDL cholesterol in the blood the better it is. The HDL can be raised by at least twenty minutes of exercising daily, decreasing body mass and keeping away from food with saturated fat. Some adolescents need to take medications in order to increase HDL. In such cases, increasing HDL can be a complicated procedure and the physician can make a therapeutic plan to increase HDL in the blood stream.

A group of children in the US participated in a test to see how effective acupuncture is among children. There are 22 respondents and each of them was given the treatment once every other day for four months.

After the treatment 20 out of the 22 respondents showed remarkable improvement. In fact 2 of them has cerebral blood flow. The only thing that did not change prior to treatment and after was the blood flow between the left and right cerebrum as it showed no differences.

Aside from traditional acupuncture to help children with autism, a preliminary study in Hong Kong is trying to see if tongue acupuncture can produce better results.

Guide competing with ordinary resources mit ilp pdf-Results have showed that of 30 respondents in the test, majority showed functional improvement of various degrees depending on the age and severity of their disabilities. Some improvement was noticeable within a few TAC sessions, especially for drooling, spasticity (scissoring or tiptoeing), ataxia, and poor balance in walking. Functional improvement was noted after one to two courses of TAC. Most children tolerated TAC well, with only occasional pain and minor bleeding in some patients.

The reason why tongue acupuncture is being experimented with is because there is a connection between the tongue and the heart through the meridians that spread to all the organs in the body. It is believed that the points on the tongue can influence the state of the other body organs thus giving relief to the one suffering from autism.

But many believe that acupuncture alone cannot help autism sufferers. It has to be combined with other things like maintaining a certain diet to help improve one's mood and communication schools. Although it is only short term, it is better than nothing until a cure is found.

Diabetes is a disease where the human body is incapable of producing or utilizing insulin. Insulin is a hormone produced by the body in order to get energy by converting starches, sugar and other items. Since the insulin isn't used properly in diabetic people, the blood sugar level increases. This glucose buildup is found in blood and is then passed onto the urine and comes out of the body and the major source of body energy is lost.

Diabetes is a serious chronic disease and should be handled at proper time; otherwise it can create serious problems. It can pose a risk and can damage parts of the human body such as eyes, teeth, gums, blood vessels, nerves, and kidneys. High Blood Pressure in Adolescents

High blood pressure is a condition where the blood pressure is more than normal. It is also known as hypertension. Heart pumps out blood, so that oxygen can reach to different parts of the body via blood. The pressure with which heart pumps blood is known as blood pressure. The blood pressure comprises of two measures, the systolic pressure and diastolic pressure. Systolic pressure is the larger figure and represents the pressure within the artery of the heart, when contractions take place which pump blood to different parts of the body. Diastolic pressure is the pressure within the artery of the heart, when the blood is filling in the heart and it is at rest. Both the pressures are measured in millimeters of mercury or mmHg. High blood pressure is abnormal increase in systolic pressure or diastole pressure.

Blood pressure is measured by putting a blood pressure cuff on the arm and placing a stethoscope on the chest. There can be very little variation in blood pressure depending upon the time, emotional moods, age, gender, weight, height, physical activity, stress and other illness such as heart disease and kidney disease. Children and adolescents become anxious when they visit the doctor. This is also an important factor which affects the blood pressure and the readings taken get tampered because of it. That is the reason why many blood pressure readings are taken in order to determine whether the adolescent has high blood pressure or not. The nurse may even ask the adolescent to calm down while taken the readings. Time gap is given between each reading, so as to give time to the adolescent to calm down. Emotions can also affect the blood pressure reading.

While acupuncture itself is a painless procedure, some smokers have claimed that they felt a prick or get sleepy.

Most smokers will have to come to the clinic 4 to 6 times before seeing any significant results. Just to give you an idea, one study shows that the respondents reported a decrease in the number of cravings to smoke just after one or two sessions. Seven out of 10 of the respondents were able to kick the habit after 5 or 6 sessions.

Because the number of test subjects is small, there are some who doubt the effectiveness of acupuncture. This is because although there are positive signs with regards to the short term effects of this technique, its effects were not sustained. This is why some medical journals have stated that it is unclear what acupuncture can do in smoking cessation.
