The field of Engineering Economics and Cost Estimation is a vital aspect of any engineering project. It involves current and upcoming economic factors, making it essential to obtain accurate estimates of future costs, benefits, and other economic parameters. Engineers often deal with projects whose scale, complexity, and uncertainty call for advanced approaches to planning and budgeting^[1]. A number of methods are used for cost estimation, including rough estimates, semi-detailed estimates, or detailed estimates, depending on the needs for the estimates^[2]. Key concepts in this field include overhead costs, cost driver identification, cost allocation methods, capital budgeting, flexible budgeting, zero-based budgeting, budgets, and estimates. Various models are available for developing cost (or benefit) estimates, such as the per-unit model, the segmenting model, cost indexes, the power-sizing model, and learning curve cost estimating. The quality of a cost estimate generally increases as the resources allocated to developing the estimate increase.

Mystery of the Missing Diamond

It was a shadowy and turbulent night. The rain was falling heavily, and the breeze was roaring. In the heart of the town, there was a gallery, where a precious diamond was on show. The diamond was called the African Star, and it was the greatest and most beautiful diamond in the globe. It was guarded by a advanced security setup, and a team of armed guards. No one could steal it, or so they thought. But an individual did. Somebody managed to get around the protection, to avoid the guards, to break the glass, and to take the diamond. And no one noticed them, no one overheard them, no one recognized who they were. They left no sign, no hint, no proof. They disappeared into the darkness, with the African Star. And the mystery of the vanished diamond began.
